

3M PU Sealant

We are offering **3M PU Sealant**, a versatile product ideal for sealing and bonding applications. It is widely used for seamless sealing of sedimentation tanks in sewage treatment plants and for filling expansion gaps in concrete structures.

The sealant is highly appreciated for its easy application, requiring no mixing while ensuring reliable curing and long-lasting performance. Every batch is tested on various quality parameters before dispatch to ensure durability, strength, and consistent performance.

Key Features

- Excellent sealing and bonding performance
- No mixing required
- Durable and long-lasting
- Ideal for concrete expansion joints and sewage treatment plants
- Quality tested before delivery
- Available at competitive market prices
