

3M Retro Reflective Tape - Frequently Asked Questions (FAQ)

Q: What temperature range can the tape withstand?

A: The tape is engineered for outdoor use and performs reliably in temperatures from -20°C to 60°C, making it suitable for all seasons and diverse climates across India.

Q: Where can the retro reflective tape be effectively utilized?

A: It can be applied to vehicles, road signage, construction barriers, traffic poles, and any area requiring enhanced visibility and safety warnings, both in private and public environments.

Q: What is the process for maintaining the reflectivity of the tape over its lifespan?

A: Clean the tape surface periodically with a soft, damp cloth to remove any dirt or debris. This helps maintain its high-intensity reflectivity without the use of harsh chemicals.

Q: What are the key benefits of using this 3M Retro Reflective Tape?

A: The tape provides superior night-time and low-light visibility, strong weather resistance, longevity, and compliance with safety standards, enhancing both effectiveness and safety for a range of traffic and warning applications.
