

Magnetic Coolant Separator

Description:

Magnetic Coolant Separator is an industrial filtration system designed to remove ferrous particles and fine metallic contaminants from coolant and cutting fluids. It helps improve coolant life, reduce machine wear, and maintain cleaner machining operations. The rotating magnetic drum enables continuous separation with efficient performance in manufacturing environments.

Typical Specifications:

- Product Type: Magnetic Coolant Separator
- Operation Type: Automatic / Continuous
- Material: Mild Steel with Magnetic Drum
- Surface Finish: Industrial Coated Finish
- Power Source: Electric Motor Driven
- Application: Coolant Filtration and Metal Particle Separation
- Usage: Industrial Processing and Machine Tool Operations
