

PHYTOZYME

A Step towards the Green Revolution

Growth Promoter • Plant Energizer • Yield Booster Flowering & Fruit Stimulant

Sea weed extract, L - Amino Acid, Protein Hydrolysate, Humic Acid (Potassium) Bioenzymes, Chelated trace elements

Phytozyme is a unique natural bio-stimulant specially designed for foliar application. All the components of Phytozyme are 100% natural, so they easily integrate with the plant metabolism.

Mode of Action : Phytozyme promotes plant growth in 3 principals ways. Plants use L-Amino Acids and Bio-stimulants from phytozyme as building blocks for the symthesis of enzyme and other essential nutrients. Certain ingredients in phytozyme directly activate enzymatic reactions in the plants. Phytozyme has chelating activity enhancing the uptake of the nutrients naturally present in to the soil or supplied with fertilizers.

Advantages of Phytozyme :

1. Optimal combination of componets with Bio-Stimulating activity.
2. Initiats cell division of the plants & enhances photosynthesis activity.
3. High concentration of free amino acid & stable organic materials.
4. Stimulate the flower & fruits Settings.
5. Tolerance against different agro-climatic condition and biotec stresses.
6. Compatible with conventional pesticides & foliar spray fertilizers.
7. Ultimately phytozyme increase crop yield & improves crop quality.

Direction for Use :

Shake well before use phytozyme can be applied during all stages in vegetables, horticulture, floriculture etc.

Dose : Phytozyme is applied @ 2 to 3 ml per liter of water.

Packing : 500 ml & 1 Ltr.
