

How to Revive Your Soil

SOIL **Revive**

The Secret Behind Fertile Soil

Methodology :

1. Drip Systems :

Apply 500ml Soil Revive in 100 Liters water and stop the drip system after 10 minutes until the solution will go into the pipes.

- Restart the drip system after half hour if chock up / Jam is less than 50%
- Restart the drip system after 1 to 2 Hrs if chock up / Jam is more that 50%

2. For Soil (Lawn area) :

- It is use for soil metal Remover from the first layer of soils where
- Mix drip Revive with 10 kg Urea / Sand and just broadcast it with free hands.

Doses :

For Drip : 500 ml / 1 Acre
: 1000 ml / 1 Hq.

For Soil : 500 ml / 1 Vigha or
: 1000 ml / 1 Acre

The Secret Behind Fertile Soil

The Ultimate formula to Create rich soil and Healthy roots so Plants or trees will THRIVE AND REVIVE

**How to
Revive Your
Soil**

What is Soil Revive ?

Soil revive is a highly effective organic constituent that decreases the unwanted Minerals/Salts in the barren and hard soil and thus maintains the pH level and increases the fertility of the soil.

Why soil revive vital ?

Friends, nowadays by using more fertilizers to obtain higher yield or by using unwanted fertilizers we make soil / land infertile day by day. By doing so salt present in the fertilizer in form of filler materials accumulated in the first layer of soil and form a smear of salts. Same ways flood irrigation will also increases the metal in soil and make it hard & compact.

Benefits

- Soil revive increases the texture and structure of soil.
- It improves the PH level of soils.
- It dissolves the all types of carbonate & bicarbonate salts which is deposited in first layers of soils.
- It makes the soil porous and increase C:N ration.
- It enhances the number of roots and root hair tremendously.
- Plants / trees will absorb more water, P&K which is present in soil and root hairs expands downwards to the soil.
- It will also check the fungal & nematodes problem effectively.
- Remove of metal smear we can achieve uniform rapid growth, germination & development of all crops.
- It can reduce the cost of fertilizers.
- It's non hazardous and very easy to handle.

Fact Sheets

Provides immunity to the plant and thus given uniform crop growth. It provides strength to each type of soils and helps in germination, growth and development of all season of crops because growth can not wait.

Methodology :

1. Drip Systems :

- Apply 500ml Drip Revive in 100 Liters water and stop the drip system after 10 minutes until the solution will go into the pipes.
- Restart the drip system after half hour if clog up / Jam is less than 50%
- Restart the drip system after 1 to 2 Hrs if clog up / Jam is more than 50%

2. For Soil :

- It is use for soil metal Remover from the first layer of soils
- Mix drip Revive with 10 kg Urea / Sand and just broadcast it with free hands.

Doses :

For Drip : 500 ml / 1 Acre
: 1000 ml / 1 Hq.

For Soil : 500 ml / 1 Vigha or
: 1000 ml / 1 Acre
