STEEL HOLLOW SECTION

SQUARE | RECTANGULAR | CIRCULAR

Trusted for Quality & Integrity

JINDAL INDUSTRIES PRIVATE LIMITED, HISSAR

Galvanized Tubes & Pipes | MS Black Tubes & Pipes | Hollow Sections | Line Pipe (API Tubes) | Swaged Poles | Powder Coated Pipes | Chaukhats

Profile :

Jindal Industries Pvt. Limited, HISSAR, is one of the reputed industrial house, and a unit of O.P. JINDAL GROUP, who have proved their unerring might in steel sector and reckoned with high esteem in the pipe manufacturing industry.

Set up in the year 1960, JINDAL-HISSAR plant is the most advanced state-of-the-art facility equipped with Modern Manufacturing Machineries. Besides having all the plants under one roof - from Rolling Milling, Welding to Galvanizing the plant has a fully functional in-house maintenance Workshop and Laboratory Testing facility. The plant is well equipped to manufacture best Quality MS Black and Galvanized Pipes & Tubes in the range of 12.7mm OD to 406.4mm OD as per National and International standards besides other variants.

The PVC segment of the company cater - Plumbing, Sanitation & Agri. (Pipes & Fittings).

In the Past five years the company has experienced manifold growth due to our relentless endeavour to maintain higher standards of Quality and service to our worthy Customers.

Steel Hollow Sections

(Square, Rectangular and Circular) for Structural Purpose

JINDAL-HISSAR, products have earned the reputation of impeccable Quality and total Reliability. The name has become synonyms with the best in Steel Hollow Sections and Tubes. Manufactured in its state-of-the art manufacturing plant, the Hollow Sections are regarded best for their excellent quality and reliability. Having BIS certification and backed by our reputed Brand name our Hollow Sections offer most comprehensive range in SHS 16 x 16mm to 220 x 220mm and RHS 20 x 40mm to 200 x 100mm.

Hollow sections are supplied to clients nationwide for a variety of applications including mechanical engineering for example, manufacturing of booms, frames and other vehicle components, especially for applications where high strength combined with excellent usability is needed. With high torsion rigidity and compressive strength, these hollow sections are comparably more efficient than conventional steel sections. The excellent distribution of material around the axis of the square and rectangular steel hollow sections allows for remarkable strength qualities and thus offers decisive advantages in its applications. The smooth and uniform profile of the section minimizes corrosion and facilitates easy, onsite fabrication to significantly enhance the aesthetics of structures. A higher strength to weight ratio credits these sections with nearly 20% reduction in the use of steel.

We never compromise on Quality

Adhering to the stringent Quality Standards has always been our motto. Whatever the circumstances may arise, we always remain stubborn as far as Quality is concerned. It is our Quality that makes us Unique. To check Quality at every stage of production Jindal Industries has its own set of strict procedure in compliance with International Standards. Various Accreditations and Certifications are testimony to our commitment to Quality and Service.

Our in-house Testing facilities are considered best in the industry.

Certification

ISO 9001:2015

OHSAS 14001:2015

ISO 45001:2018

IS:4923

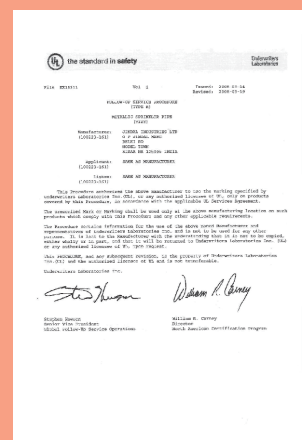

IS:3601

IS:1161

Quality Control

The quality of our product is controlled during the manufacturing process. It starts with slitting the strip edges, continues with speed, temperature control during the high frequency induction welding and is followed testing. Off-line, drift and flattening tests are conducted.

This is all within our QUALITY MANAGEMENT SYSTEM.

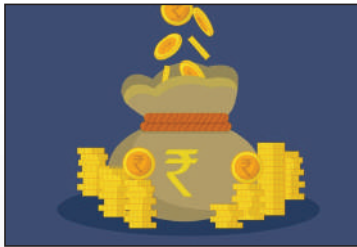

Advantages of Jindal Steel Hollow Sections

The excellent distribution of material around the axis of these steel hollow sections allows for remarkable strength qualities and thus offers decisive advantages as regards to application technology.

Their higher strength to weight ratio could result in upto 30% savings in steel.

Jindal Steel Hollow Sections 5Cs

Cost Effective

- By virtue of its shape Hollow sections have high Radius of Gyration and other properties resulting in savings in Material, Transportation and Fabrication cost.
- Less Surface area compared to equivalent conventional sections results in savings in Paint and Labour cost.

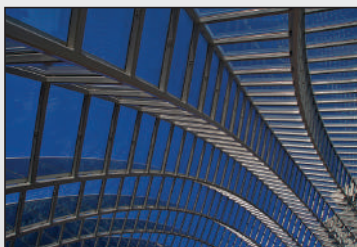

Corrosion Resistant

- Less exposed surface area combined with superior quality raw material results in less corrosion.
- Smooth uniform profiles of sections minimizes dust and moisture accumulation.

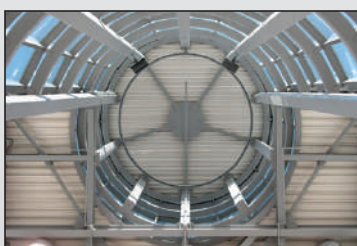

Concentric Strength

- By virtue of its shape Hollow sections have high Radius of Gyration resulting in higher concentric strength.
- Due to closeness of the section there will be higher torsional rigidity compared to conventional sections.
- Better lateral stability and lower wind drag.
- Enables weight reduction of upto 30%.

Convenience of Fabrication

- Due to less weight and smoother profile, fabrication is easier.
- Also minimum use of gusset plates expedites the fabrication process.

Creativity

- Due to higher torsional rigidity and better moment resistance on both the axis, bending of hollow section is easier compared to open sections. This gives flexibility to the architects to shape their structures and express their creativity.
- Smooth profile of Jindal Steel Hollow enhances the aesthetic appeal of the structures.
- Most suitable for usage in exposed environment.

Structural Purposes Applications of JINDAL HISSAR

The applications of JINDAL HISSAR Section Pipes has been classified under the following segments:

Architectural | Infrastructural | Industrial | General Engineering

Architectural

Applications

- ◆ Shopping Malls
- ◆ Canopies/Atrium
- ◆ Partition Frames
- ◆ Space Frames
- ◆ Guard Rails & Staircases
- ◆ Glass Curtain Wall Frames

Attributes

- ◆ Lightweight
- ◆ Smooth surface finish
- ◆ Flexible and easy to form shapes
- ◆ Appealing aesthetics
- ◆ Contemporary

Infrastructural

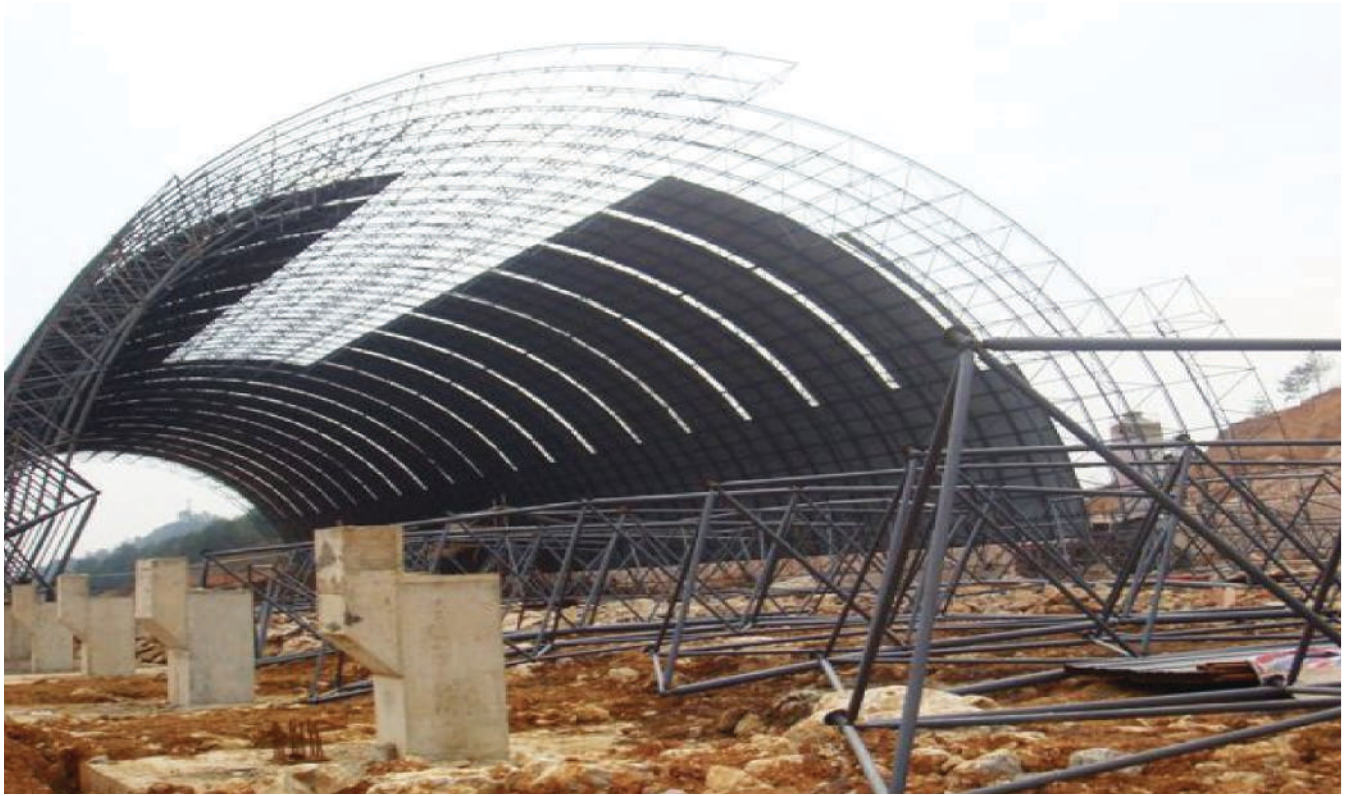

Applications

- ◆ Airport Terminal Buildings
- ◆ Bridges / Pedestrian Walkovers
- ◆ Bus Stands Building
- ◆ Sports Galleries
- ◆ Railways Platforms / Foot Over Bridges
- ◆ Hoarding Supporting Structures
- ◆ Water Park Structures

Attributes

- ◆ High strength
- ◆ Various sizes and thickness
- ◆ Easy fabrication
- ◆ Lightweight
- ◆ More column free space

Applications

- ◆ Industrial Sheds
- ◆ Trusses, Columns and Purlins
- ◆ Material Storage Racks
- ◆ Pipe Racks
- ◆ Conveyor Gantries, Trestles
- ◆ Drilling Rigs
- ◆ Steel & Power Plants
- ◆ Pallets

Attributes

- ◆ High strength to weight ratio
- ◆ Ease of fabrication and erection
- ◆ Easy maintenance
- ◆ Free from sharp edges
- ◆ Cost effective

Applications

- ◆ Automobile Chassis
- ◆ Greenhouse Structures
- ◆ Truck & Bus Body Members
- ◆ Hoarding Structures
- ◆ Exhibition Stalls
- ◆ Scaffolding
- ◆ Furniture
- ◆ Solar Power Plant Structures
- ◆ Amusement Park & Playground Equipment

Attributes

- ◆ Lightweight
- ◆ Ease of fabrication
- ◆ High torsional resistance
- ◆ Minimal painting area
- ◆ Appealing aesthetics

Manufacturing Process

The process utilises the latest technology and modern equipments for producing high Quality ERW Hollow Section:

1. Slit Preparations

HR Coils are slitted to predetermined widths for each size of pipe and thickness. Slitted coil is uncoiled at the entry of ERW mill and the ends are sheared and welded one after another to make it single endless strip.

2. Forming

Slitted coil are initially formed into 'U' shape and then into a cylindrical shape with open edges using a series of forming rolls.

3. Welding

The open edges are heated to the required temperature through high frequency low voltage high current and press welded by forge rolls making perfect and strong butt-weld without filler

materials.

4. Sizing & Cutting

After water quenching, slight reduction is applied to pipes with sizing rolls to give them desired accurate outside dimensions.

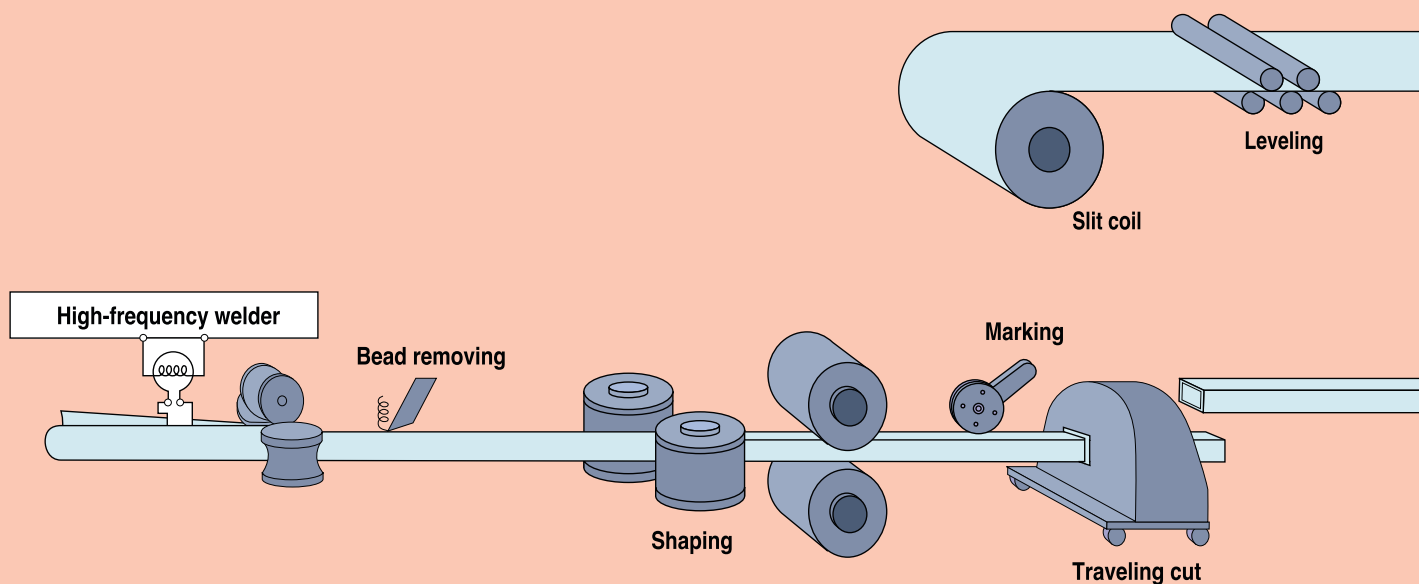

Pipes are cut to required lengths by flying cut off disc/saw cutter.

5. Packing

Finished pipes are bundled in desired number of pieces as per customer's requirement and packed properly to ensure freshness till delivery.

6. Coating

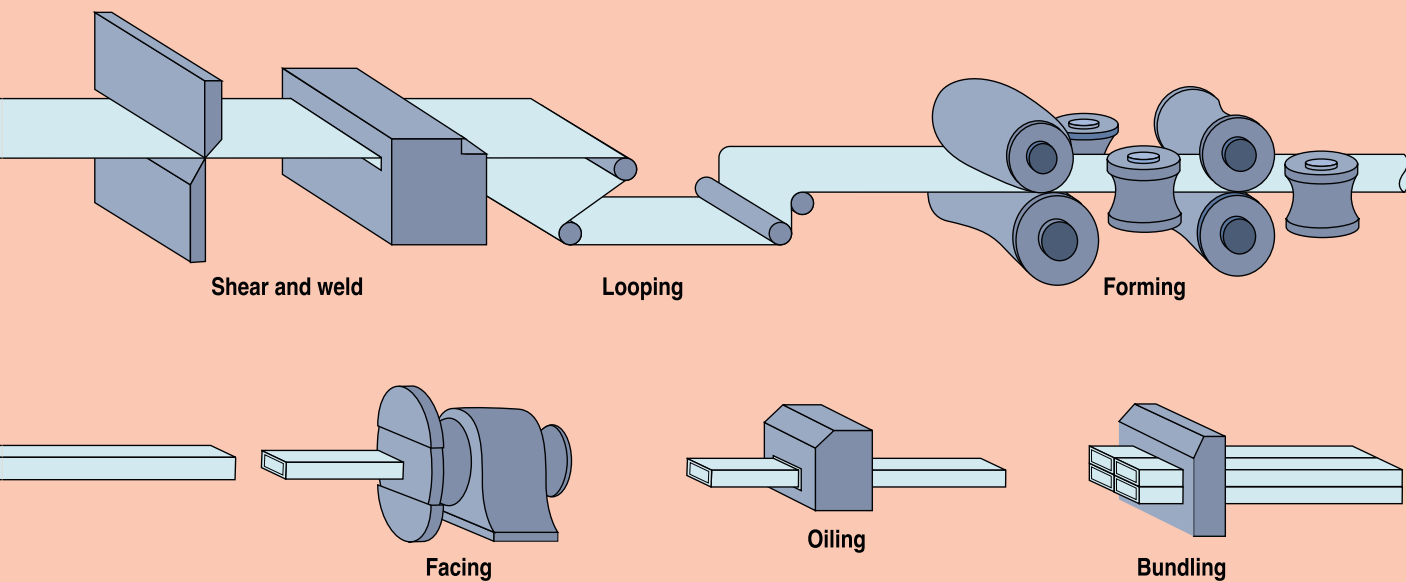

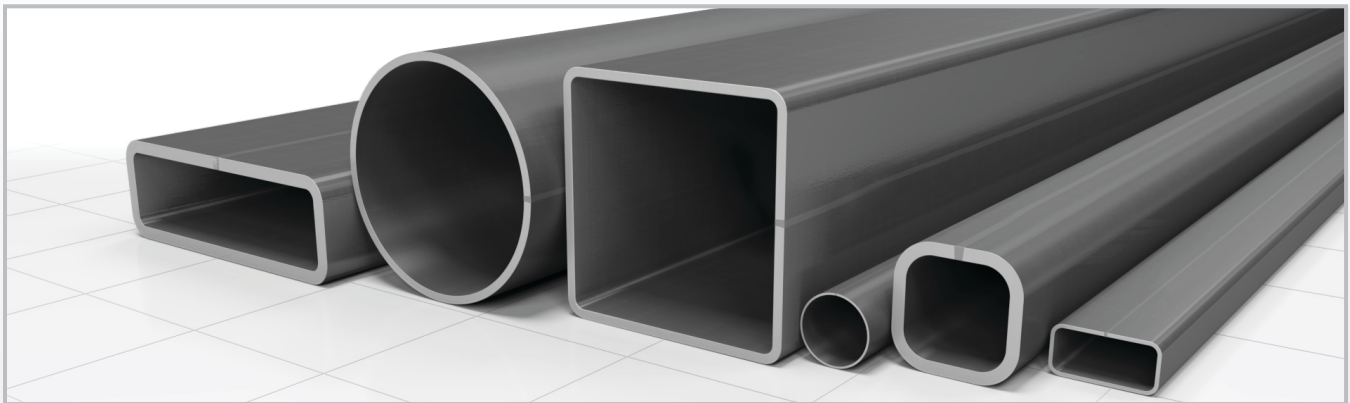

In addition to Rust Preventive oil coating and black varnish, the Hollow Sections can be supplied as zinc coated. Zinc coating processes shall be hot dip galvanizing.

Quality - a prerequisite

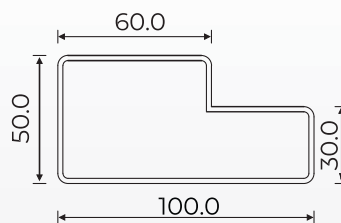

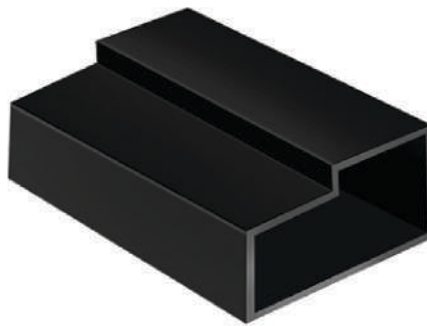

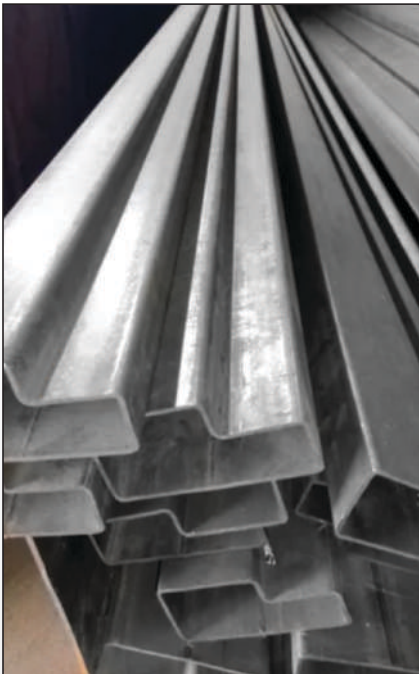

Sr. No.	Machine	Purpose
1	Universal Testing Machines 100 Ton	For material testing (mechanical properties).
2	Digital Ultrasonic Thickness Gauge	For checking thickness & pipes.
3	Mandrels and Fixtures	For bend test.
4	Hydraulic Press	For ductility test.
5	Bending Machine	For pipe bend test.
6	Impact Testing Machine (300J)	For Impact Test.
7	Spectro Analyser	For Chemical Analysis

Chaukhats (Door Frames)

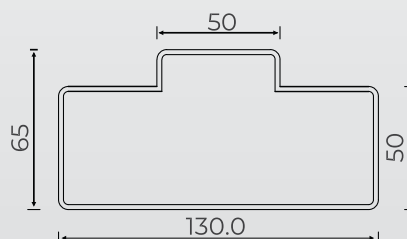

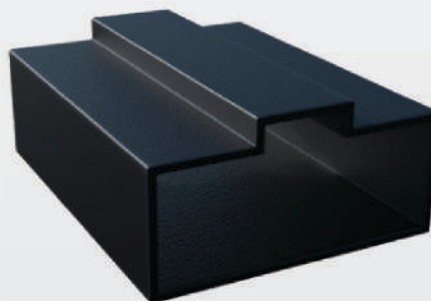

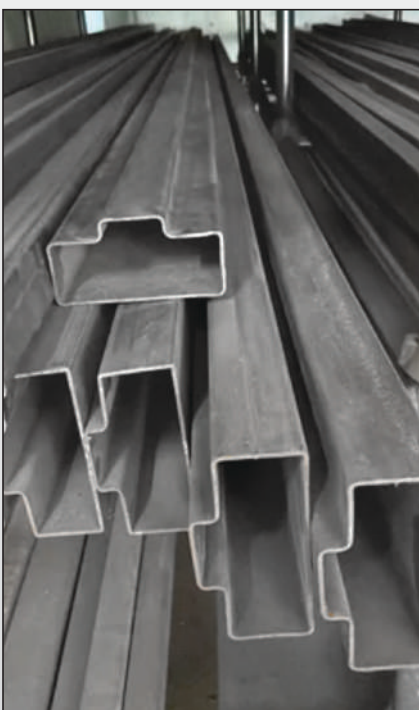

Single Door

Size	100 x 50 mm
Thickness	1.0 to 2.5 mm

Double Door

Size	130 x 65 mm
Thickness	1.4 to 2.5 mm

Fabrication and Connection Details

Jointing : Workshop & Site Practice

CUTTING

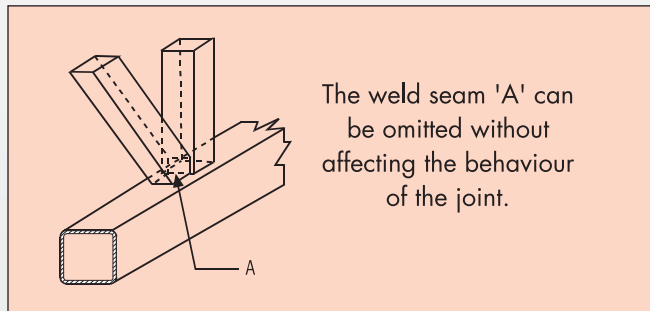

Jindal Steel Hollow Sections can be cut:

- By means of a heavy duty circular/hand saw
- By flame cutting: either manual or automatic
- ▶ The path of the cut can be marked directly on the surface of the section or on a template after shop layout
- ▶ For section thicknesses of 5 mm and above, edges may be chamfered for proper welding penetration

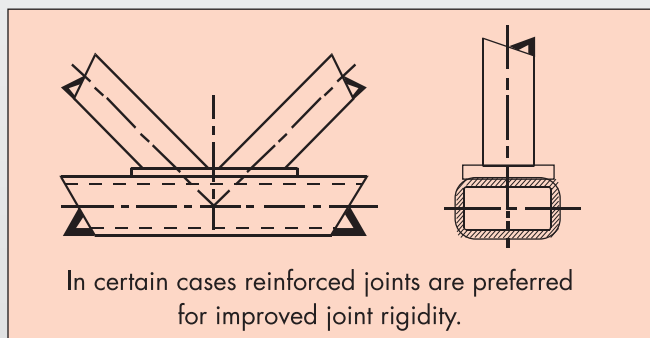

BENDING

- ▶ Axial cold bending of Jindal Structural Steel Hollow Sections is possible by using an internal mandrel and the roller must be adapted to the shape and size of the section
- ▶ Three roll bending machine may be adapted - bend by slow multiple pass, through trial and error method
- ▶ Thicker or larger sections are recommended to be preheated in a normalising furnace before bending in hot condition for better formation

OVERLAP JOINTS

POSSIBLE REINFORCEMENTS

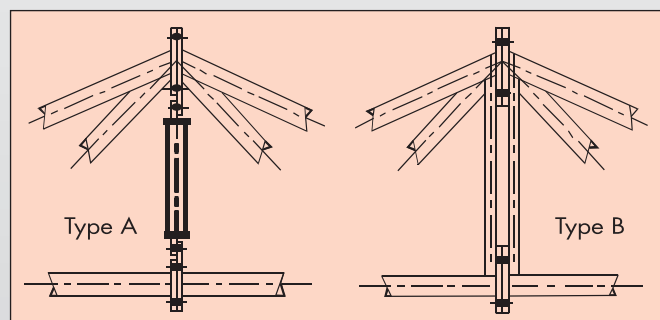

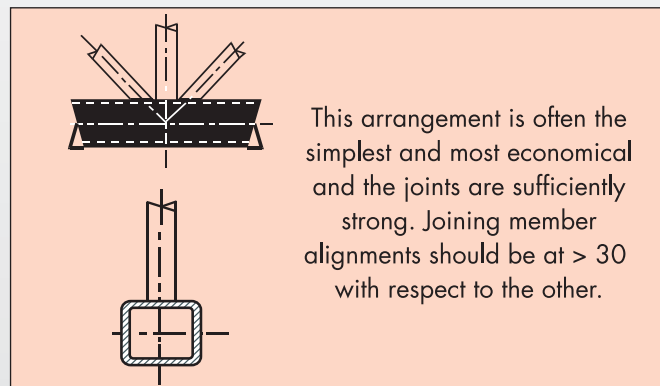

WELDING

Technique in principle is similar for that of conventional sections. Follow relevant BIS code of practice and design conditions.

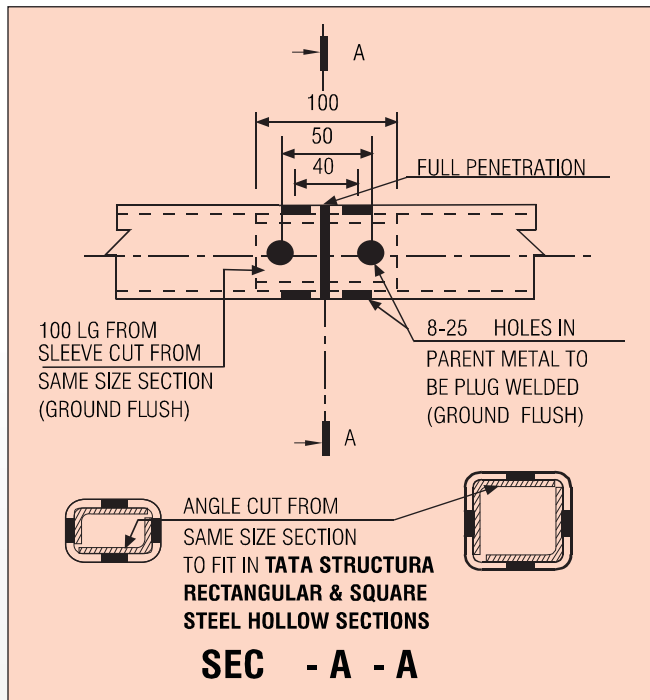

- ▶ Electrodes : Low hydrogen electrodes are suggested for use.
- ▶ Butt welds : The throat thickness of the seam:
 - a) Wall thickness of the section when joining members are of equal thickness,
 - b) Wall thickness of thinner section, If thicknesses are different. Backing strip may be provided to ensure total root penetration in case of thicker section design size.
- ▶ Fillet welds : Various types may be provided. Size of the fillet is guided by the throat thickness as explained above.
- ▶ Note : All free ends of Jindal Steel Hollow Sections should be sealed properly by welding, to prevent internal corrosion.
- ▶ Normal M. S. electrodes of reputed brands are recommended. Moisture from electrode should be removed by baking before welding.
- ▶ Sequence : Edges are to be tack welded to maintain uniform gap during welding to minimise residual stress:
 - Transverse weld before longitudinal one
 - Fillet weld following butt weld
 - Starting from inside to outwards.

GAP JOINTS

BOLTED RIDGE DETAILS & TIE CONNECTIONS

Bolted connections as shown (Type A & Type B) are adopted by using single or double sag ties respectively.

TYPICAL SPLICING DETAIL

The internal backing sleeve fulfils two functions; it facilitates the proper alignment of the parts and acts as backing strip for butt weld. For more technical information, visit our website www.jindalhissar.com or contact us for Designer Handbook.

Joining : Workshop & Site Practice

CORRECTING DISTORTIONS

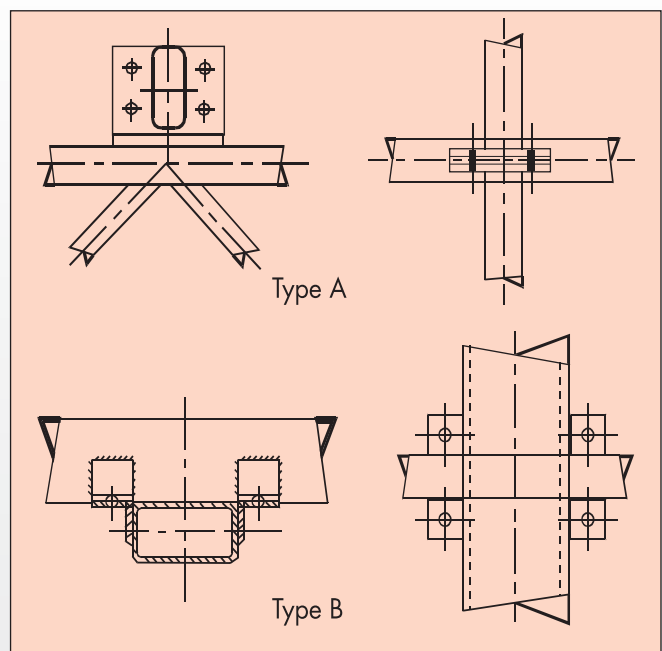

Post weld distortions, despite precautions, can be corrected by cold bending, hammering of the welds or by applying controlled local compensating heating on opposite sides. It is imperative to avoid excessive thermo-mechanical operation.

BOLTED/RIVETED CONNECTIONS

- Fasteners should conform to relevant BIS specifications and arrangements should be adequate to withstand combination of design loads at joints and to facilitate ease of fixing
- As internal surfaces of Jindal Steel Hollow Sections are inaccessible, they are adaptable to: Special structural fittings for indirect external bolting Blind bolts Self threading bolts, etc.

ERECTION

- In principle similar techniques are adopted as those for conventional section assemblies. For hoisting and handling no additional stiffeners are required due to high torsional rigidity of Tata Steel Hollow Sections.

PURLIN CONNECTIONS

Purlin becomes very efficient with Jindal Steel Rectangular & Square Hollow Sections because of its lateral rigidity to avoid intermediate sag rods. The connection shown (Type X & Type Y) can provide end - fixity.
