Dear Sir

It's our privilege to introduce ourselves as professionally managed company, specialist in the field of Industrial Automation Products. SUPREME INTERNATIONAL is involved in Designing, Developing, Manufacturing & Marketing of the entire range of innovative Electrical Electronic and IOT products.

SUPREME INTERNATIONAL is an engineer venture, focusing on the entire gamut of Industrial & Domestic Automation related solution. Our customers, therefore, gets undivided attention from a company dedicated to provide answers to all their Electronic/Electrical customized automation related problems.

We at SUPREME INTERNATIONAL are committed to demonstrate excellence in performance on a continual basis, as an intrinsic element of our corporate philosophy. To achieve this we commit ourselves to continue product innovations to improve quality standard. We are automation people, we do have vast experience and versatility in designing all types of automation products.

In reference to your requirement, It is irrefutable fact that patient's care is of paramount importance for any medical institution. Hence it goes without saying that each patient needs to have dedicated method to communicate with nurse while seeking help. As one of the prominent nurse call system manufacturers in Delhi, India we have developed most reliable systems that span across the conventional optic-acoustic version to the one that seamlessly integrates systems with digital voice transmission. Our fully scalable two wire communication systems fit perfectly into the need of elders in assisted living or medical care.

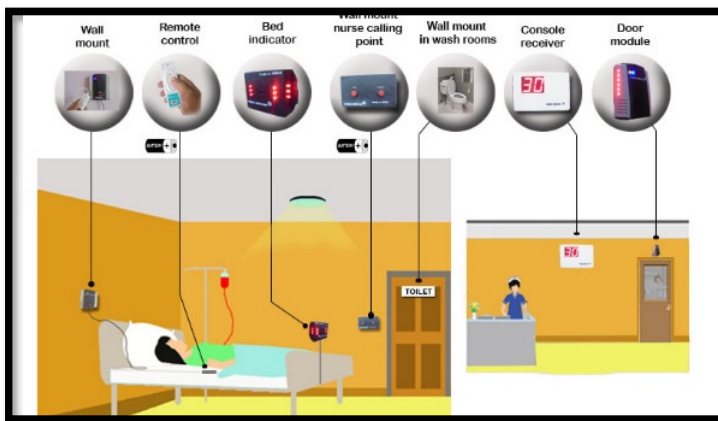

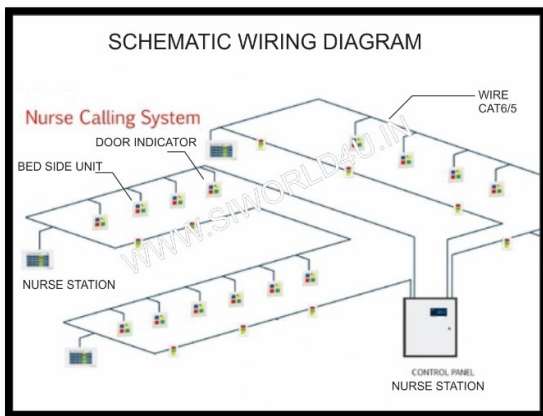

Our two wire data transfer technology have the following benefits-

2 Wire Two Way Communication

- -Wire technology provides many advantages over a conventional system:
- Ease of installation. 2-Wire control systems require that you only lay two wire run per system as opposed to eight wire run with a conventionally wired control system.
- Ease of expansion. You can even move your controller from one location to another over time if you need to. It just needs to touch the 2-Wire path at some point.
- Cost Reduction. Copper wire is increasingly expensive and 2-Wire system uses much less of it; in fact, you can use as much as 80 percent less copper wire by installing a 2-Wire system. In addition, the installation labor required to run a single 2-Wire run vs multiple wire runs is a substantial cost saving.
- Hidden Cost Recovery. 2-Wire controllers can expand up to 255 stations on one controller, potentially eliminating the need for up to four conventional 48 station controllers. Reducing controller locations can in turn reduce the need for multiple electric connections, again saving substantial costs.
- Great reliability. Supreme 2-Wire systems are highly reliable.
- Ease of repairs. Should some new trenching or some other event cut the wire path, you don't have to sort, tone and splice a multitude of wires. Simply reconnect the two 2-Wire cores and you're back in business. Troubleshooting 2-Wire is easy as well. When a 2-Wire cable gets cut everything up to that point will work enabling you to very quickly identify the break and fix it.
