

In the treatment of bronchial asthma
and COPD of any origin

S-PHYLLIN

Acebrophylline 100 mg

The new generation
airway mucus
regulator

For the long term sustain result
Also Available

S Phyllin SR 200

Acebrophyllin SR 200 mg Tabs

- ✓ Alter mucus gel secretion phase by lowering viscosity and increasing the serous gel phase.
- ✓ Increases the mucociliary clearance.
- ✓ Inhibits intracellular phosphodiesterase associated with CAMP levels and facilitates bronchial muscles relaxation.
- ✓ Significantly reduces the airway inflammation and obstruction in chronic stages.
- ✓ Reduces the viscosity and adhesivity of the mucus.
- ✓ Reduces the frequency of episodes of bronchial obstruction.

DOSAGE :

For COPD and bronchial asthma (Adults):

Consider administration of 100 mg of Acebrophylline, twice daily.
