

MIG Welding Wire Product Catalog

Description:

MIG Welding Wire is manufactured using premium quality raw materials to provide excellent welding performance and strong arc stability. It is widely used in fabrication, automotive, construction, engineering, and industrial welding applications. The wire ensures smooth feeding, low spatter generation, and high tensile strength for reliable welding operations. Designed for use with MIG welding machines, this welding wire provides superior finish quality and durable weld joints. It is available in different grades including mild steel, stainless steel, aluminum, and copper alloy options. The product is corrosion resistant, easy to use, and suitable for continuous industrial usage.

Specification	Details
Product Name	MIG Welding Wire
Usage	Welding
Material	Mild Steel / Stainless Steel / Aluminum / Copper Alloy
Size	Standard
Coating	Copper Coated / Zinc Coated
Operating Voltage	230-440 Volt (V)
Supply Ability	1000 Per Month
Delivery Time	2-10 Days
Application	Industrial Welding
Color	Copper
