WHAT IS NEUROLOGICAL DISORDERS?

In layman terms, neurological disorders are primarily caused by the imbalance in the Vata function. In other words neurological diseases are disorders which affect the brain, central and autonomic nervous system. These disorders can either affect an entire neurological pathway or can only affect a single neuron. Ayurvedic treatment focuses on bringing back the doshas to the equilibrium. It is achieved via performing several Panchakarma procedures combined with supplement such as herbs and herbs-mineral preparation of Ayurveda.

About Ayurveda

Ayurveda is considered as one of the oldest of the traditional systems of medicine, 5000 years ago accepted worldwide. Ayurveda is an ancient system of life (Ayur) knowledge (Veda) arising in India thousands of years ago. Ayurveda theory evolved from a deep understanding of creation. The great rishis or seers of ancient India came to understand creation through deep meditation and other spiritual practices. The rishis sought to reveal the deepest truths of human physiology and health. They observed the fundamentals of life, organized them into an elaborate system, and compiled India's philosophical and spiritual texts, called Veda of knowledge.

Ayurveda is a careful integration of six important Indian philosophical systems, many physical/behavioral sciences, and the medical arts. One verse from an ancient authority says Ayurveda deals with what is good life and bad life, happiness and misery, that which supports or destroys, and the measurement of life. It works to heal the sick, to maintain health in the healthy, and to prevent disease in order to promote quality of life and long life. Health is defined as an experience of bliss/happiness in the soul, mind, and senses and balance of the body's three governing principles, seven tissues, three wastes, digestion, and other processes such as immune functioning. Health is not the absence of symptoms. Ayurveda has objective ways to assess each of these, pulse assessment being the primary means.
