PHILIPS
RESPIRONICS

Rem Star: Features

Reliability

- Water ingress protection
- Robustness of the device

Comfort

- Only Basic CPAP with FLEX
- Rain out prevention
- Heated tube compatible
- System One low noise level
- Leak compensation

Affordable

- Competitive price

Compliance

- Integrated SD card (EP/EB/EA reporting)

Five components of intelligent CPAP therapy:

- Humidity control and Dry Box technology
Better humidification management to prevent rainout and water damage
- System One resistance control
Optimized pressure delivery, no matter which mask is used
- Advanced event detection
Identification of complicated and changing conditions that may indicate alternative therapy
- Flex Family technologies
Improved patient comfort with proven pressure relief
- Encore data management and reporting
Intelligent patient management for improved compliance

Unmatched patient comfort and convenience

Reduced sound levels

With the addition of our advanced WhisperSmart technology, making it one of the quietest devices on the market when it matters most: when patients are breathing on it.

Improved humidity output and control

With improved humidity output, it offers five patient-selected relative humidity settings to deliver customized comfort while dramatically reducing rainout. In addition, our "classic" mode provides the ability to shut off Humidity Control, if preferred.

Mask fit and seal monitoring

With the Mask Fit feature, it provides patients the ability to check the seal of their masks in real time and lets them and their clinicians know what leaks may result when pressures increase from baseline throughout the night

Easy night-time viewing

A back-lit screen ensures patients will be able to see interface even in the dark.

Enhanced filtration design

Packaged with each device, a white, ultra-fine filter provides filtration that may enhance comfort without increasing noise or changes in efficacy.

15mm tubing option

System One now features both 15 mm and 22 mm tubing options that may provide greater patient comfort and customization of therapy.

Multilingual display

RemStar devices can be set to display different languages, depending on the country of use. U.S. models display English or Spanish; Canada models display English or French.
