

20G IV Cannula

The 20G IV Cannula is a sterile, single-use intravenous catheter intended for reliable venous access. It features a sharp stainless steel needle, transparent catheter, ergonomic fixation wings, injection port, and color-coded hub for quick identification. Manufactured from medical-grade materials and EO sterilized, it is suitable for hospitals, clinics, emergency departments, and diagnostic centers. The leak-resistant design supports smooth fluid administration and dependable clinical performance.
