

Blood Transfusion Set

The Blood Transfusion Set is a sterile, single-use medical device designed for the safe and efficient administration of blood and blood components. Manufactured from medical-grade PVC, it features a transparent drip chamber, precision roller clamp for accurate flow control, flexible kink-resistant tubing, injection port, and a secure luer connector. The set is EO sterilized and individually packed to ensure maximum patient safety. Suitable for hospitals, clinics, blood banks, emergency care units, and healthcare facilities, it offers dependable performance during transfusion procedures.
