

Hegman Gauge / Fineness of Grind Gauge

Grind Gauge (Hegman Gauge) is a precision gauge manufactured from hardened stainless steel and has two ground channels giving scales of both Microns and Hegman. Supplied complete with scraper blade. Three models are available 0 - 25, 0 - 50 and 0 - 100 micron.

This gauge is used for the checking of particle size in paint or inks i.e. Dyes, Talcum, Flour, and Chemicals etc. In operation the paint / ink samples are placed into the top end of the gauge and then drawn down using the scraper blade.
