

Mild Steel Rebar Coupler

The Mild Steel Rebar Coupler is a durable and precision-engineered component used for joining reinforcing bars in construction applications. Manufactured from high-quality mild steel, it offers excellent strength, reliable performance, and easy installation. Its threaded design ensures a secure connection, making it ideal for residential, commercial, and infrastructure projects.

Key Features

- Made from premium mild steel
- Corrosion-resistant and durable
- Precision internal threading
- Easy to install and maintain
- Suitable for various construction applications
- Provides strong and reliable bar connections
