

Kinco Stepper System

Stepper System

- Stepper Driver
- Stepper Motor

Corporate Profile

Kinco Automation is a leading supplier of industrial automation products and solutions from China with full line of automation products including industrial human machine interfaces (HMI), AC servo systems, stepper systems, PLC, VFD and field bus products. Kinco aims to help you achieve a leading position in your market.

Reliable partner of your success

- Gain the competitive edge
- Support your business
- Serve your needs

High standard of quality management

- 100% function and reliability test before delivery
- Quality control and tracking go through the full product life cycle
- Certificated process control and quality management capability

Proven performance

- Customers in over 40 countries and in diverse markets and sectors

Perpetual innovation

- 8% of annual turnover invested in R&D
- Experienced international R&D teams
- Patent applications continue to rise every year
- Market-driven R&D: we organize our R&D activities around the voice from the customers

Provide Chinese Automation Solutions for Global Customers

Stepper Driver 03

- Kinco stepper driver 2M412
- Kinco stepper driver 2M420
- Kinco stepper driver 2M530
- Kinco stepper driver 2M880N
- Kinco stepper driver 2M1180N
- Kinco stepper driver 2M2280N
- Kinco stepper driver 3M458
- Kinco stepper driver 3M880N
- Kinco stepper driver 3M2280N
- Kinco CAN bus stepper driver FM860

Stepper Motor 13

- Kinco two-phase stepper motor 42 series
- Kinco two-phase stepper motor 56 series
- Kinco two-phase stepper motor 86 series
- Kinco two-phase stepper motor 110 series
- Kinco two-phase stepper motor 130 series
- Kinco three-phase stepper motor 57 series
- Kinco three-phase stepper motor 85 series

Installation and Selection 21

- Denomination rules of stepper motor/driver
- Guide to model selection of stepper motors
- Model selection of stepper motors
- Installation instructions for stepper motors
- Selection table for stepper driver/motor
- Typical wiring diagram

Kinco 2M412 Stepper Motor Driver (Two-phase Bipolar Micro Step)

Kinco 2M420 Stepper Motor Driver (Two-phase Bipolar Micro Step)

- The maximum supply voltage can reach 40V;
- The bipolar constant current drive mode is taken, with a maximum drive current up to 1.2A per phase, which can drive any 42 series two-phase bipolar hybrid stepper motors with a current less than 1.2A;
- The drive output phase current of a motor can be regulated through the DIP switch, to match motors of different specifications;
- A DIP switch is used to set the automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- A dedicated control chip is used, with a maximum of 256/200 subdivisions. The subdivision function can be set by the DIP switch, to ensure the best operation stability;
- Supporting offline function so that the output current of a motor can be cut off if necessary;
- Optical coupling devices are used for the isolation of the input circuit of the control signals to reduce interference of external noises.

- The maximum supply voltage can reach 40V, which can provide better dynamic drive performance;
- The bipolar constant current drive mode is taken, with a maximum drive current up to 2.5A per phase, which can drive any 42 and 56 series two-phase bipolar hybrid stepper motors with a current less than 2.5A;
- The drive output phase current of a motor can be regulated through the DIP switch, to match motors of different specifications;
- A DIP switch is used to set the automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- A dedicated control chip is used, with a maximum of 256/200 subdivisions. The subdivision function can be set by the DIP switch, to ensure the best operation stability;
- Supporting offline function so that the output current of a motor can be cut off if necessary;
- Optical coupling devices are used for the isolation of the input circuit of the control signals to reduce interference of external noises.

Mechanical Dimensions Unit:mm

Technical Specifications

Supply voltage	12 ~ 40V DC
Output phase current	0.2 ~ 1.2A
Control signal input current	6 ~ 16mA
Cooling method	Natural air cooling
Operating environment	Avoid the environment with a great amount of metallic powder, oil mist, or erosive gases
Operating temperature	-10°C ~ +45°C
Operating humidity	<85% (non-condensing or water drops)
Weight	0.13Kg

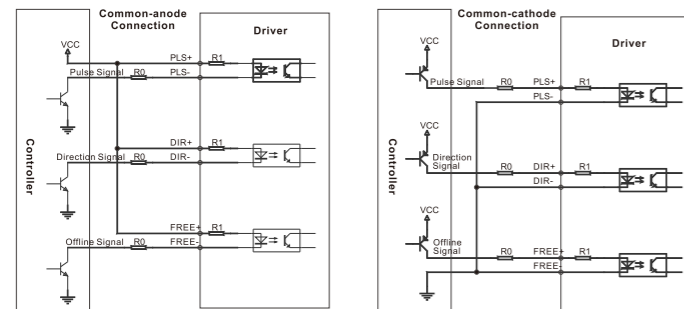

Mechanical Dimensions Unit:mm

Technical Specifications

Supply voltage	24 ~ 40V DC
Output phase current	0.3 ~ 2.5A
Control signal input current	6 ~ 16mA
Cooling method	Natural air cooling
Operating environment	Avoid the environment with a great amount of metallic powder, oil mist, or erosive gases
Operating temperature	-10°C ~ +45°C
Operating humidity	<85% (non-condensing or water drops)
Weight	0.4Kg

Typical Wiring Diagram

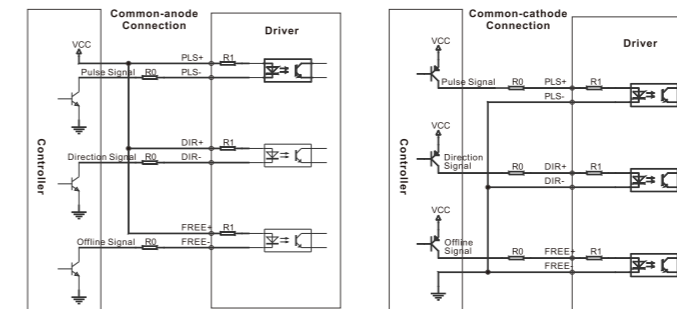

Precautions

1. Please poke the DIP switch correctly as following figure.

2. When the voltage of the control signal is 5V, then the resistors in the connection figure are 0Ω. When the voltage of the control signal is 24V, then the resistors in the connection figure are 2KΩ.

Typical Wiring Diagram

Precautions

1. Please poke the DIP switch correctly as following figure.

2. When the voltage of the control signal is 5V, then the resistors in the connection figure are 0Ω. When the voltage of the control signal is 24V, then the resistors in the connection figure are 2KΩ.

Functions of DIP Switch

There is a red 8-bit function setting switch at the top of the driver, which is used to set the working mode and parameters of the driver. Please carefully read the reference before use. Do remember to cut off the power before changing the settings of the DIP switch.

The front view of the DIP switch is as follows:

Serial Number	Function of ON	Function of OFF	Remarks
DIP1~DIP4	Subdivision setting	Subdivision setting	
DIP5	Half current of static current	Full current of static current	
DIP6~DIP8	Output current setting	Output current setting	

The subdivision setting table			DIP1 is ON	DIP1 is OFF
DIP2	DIP3	DIP4	subdivision	subdivision
ON	ON	ON	N/A*	2
OFF	ON	ON	4	4
ON	OFF	ON	8	5
OFF	OFF	ON	16	10
ON	ON	OFF	32	25
OFF	ON	OFF	64	50
ON	OFF	OFF	128	100
OFF	OFF	OFF	256	200

* N/A indicates invalid. The rotary switch is forbidden setting as N/A.

Current Regulation

There is a red 8-bit function setting switch at the top of the driver, which is used to set the working mode and parameters of the driver. Please carefully read the reference before use. Do remember to cut off the power before changing the settings of the DIP switch.

The front view of the DIP switch is as follows:

The output phase current setting table			
DIP6	DIP7	DIP8	Output Current
OFF	OFF	OFF	0.20A
OFF	OFF	ON	0.35A
OFF	ON	OFF	0.50A
OFF	ON	ON	0.65A
ON	OFF	OFF	0.80A
ON	OFF	ON	0.90A
ON	ON	OFF	1.00A
ON	ON	ON	1.20A

Functions of DIP Switch

There is a red 8-bit function setting switch at the top of the driver, which is used to set the working mode and parameters of the driver. Please carefully read the reference before use. Do remember to cut off the power before changing the settings of the DIP switch.

The front view of the DIP switch is as follows:

Serial Number	Function of ON	Function of OFF	Remarks
DIP1~DIP4	Subdivision setting	Subdivision setting	
DIP5	Half current of static current	Full current of static current	
DIP6~DIP8	Output current setting	Output current setting	

The subdivision setting table			DIP1 is ON	DIP1 is OFF
DIP2	DIP3	DIP4	subdivision	subdivision
ON	ON	ON	N/A*	2
OFF	ON	ON	4	4
ON	OFF	ON	8	5
OFF	OFF	ON	16	10
ON	ON	OFF	32	25
OFF	ON	OFF	64	50
ON	OFF	OFF	128	100
OFF	OFF	OFF	256	200

* N/A indicates invalid. The rotary switch is forbidden setting as N/A.

The output phase current setting table			
DIP6	DIP7	DIP8	Output Current
ON	ON	ON	0.3A
ON	ON	OFF	0.6A
ON	OFF	ON	0.8A
ON	OFF	OFF	1.2A
OFF	ON	ON	1.4A
OFF	ON	OFF	1.6A
OFF	OFF	ON	2.0A
OFF	OFF	OFF	2.5A

Kinco 2M530 Stepper Motor Driver (Two-phase Bipolar Micro Step)

Kinco 2M880N Stepper Motor Driver (Two-phase Bipolar Micro Step)

- The maximum supply voltage can reach 48V;
- The bipolar constant current drive mode is taken, with a maximum drive current up to 3.5A per phase, which can drive any 56 and 86 series two-phase bipolar hybrid stepper motors with a current less than 3.5A;
- The drive output phase current of a motor can be regulated through the DIP switch, to match motors of different specifications;
- Supporting automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- A dedicated control chip is used, with a maximum of 256/200 subdivisions. The subdivision function can be set by the DIP switch, to ensure the best operation stability;
- Supporting offline function so that the output current of a motor can be cut off if necessary;
- Optical coupling devices are used for the isolation of the input circuit of the control signals to reduce interference of external noises.

- High performance, multiple functions, simple operation, cost-effective;
- Automatic parameter adjustable regulation, ensures motor run at optimal performance;
- Supporting driver test running function;
- Supporting phase memory function, driver will record phase position of motor during motor stop to ensure motor not shake when re-power;
- With step smooth filter, can smooth input pulse and reduce the transient motion of motor, make sure motor run more smoothly;
- Supporting automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- Automatic internal high-subdivision conversion technology ensures motor run at optimal subdivision state;
- Opto-isolation ERR signal output with max. current of 20mA;
- Opto-isolation signal input, with pulse response frequency up to 400KHz.

Mechanical Dimensions Unit:mm

Technical Specifications

Supply voltage	24 ~ 48V DC
Output phase current	1.2 ~ 3.5A
Control signal input current	6 ~ 16mA
Cooling method	Natural air cooling
Operating environment	Avoid the environment with a great amount of metallic powder, oil mist, or erosive gases
Operating temperature	-10°C ~ +45°C
Operating humidity	<85% (non-condensing or water drops)
Weight	0.7Kg

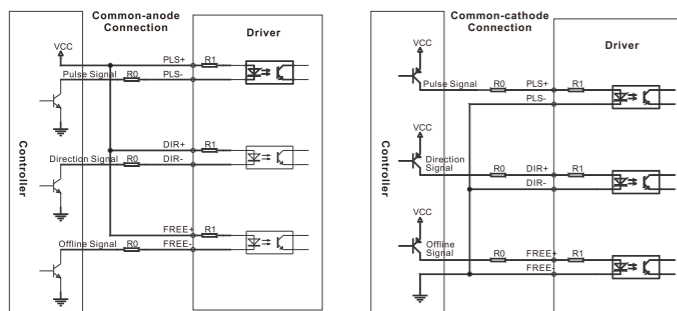

Technical Specifications

Input voltage	24 ~ 70V DC
Voltage for overvoltage protection	85V
Voltage for undervoltage protection	15V
Temperature for overheat protection	>80°C (temperature of thermistor)
Output current (peak, Unit: A)	2.4/2.8/3.2/3.6/4.0/4.4/4.8/ 5.2/5.6/6.0/6.4/6.8/7.2/ 7.6/8.0, total 15 setting values.
Micro step	2/4/5/8/10/16/20/25/32/40/50/64/100/128/200/256, total 16 subdivisions.
Adaptable motor	56 and 86 series two-phase bipolar hybrid stepper motor
Input signal	PLS(CW), DIR(CCW), A/B,FREE; Current range:6~16mA
Output signal	ERR, open collector output, maximum current: 20mA
Control signal mode	PLS+DIR; CW/CCW, A+B
Automatic half current	The driver will reduce phase current of the motor by a half in 1.5 seconds
Operation indication	Combination of Run and Error LED.
Protection	Over-voltage, under-voltage, short circuit, overheat
Cooling method	Nature air cooling
Environment	Operation: Avoid the environment with great amount of metallic powder, oil mist, or erosive gases. Environment: Avoid the environment with great amount of metallic powder, oil mist, or erosive gases. Operation humidity: <85%, RH (non-condensing or water drops) Operation temperature: 0°C ~ +40°C Storage temperature: -20°C ~ +70°C
Weight (net)	0.71Kg
Dimensions	140 x 96 x 52.5 mm
Ingress protection	IP20

Mechanical Dimensions Unit:mm

Typical Wiring Diagram

Precautions

1. Please poke the DIP switch correctly as following figure.

2. When the voltage of the control signal is 5V, then the resistors in the connection figure are 0Ω. When the voltage of the control signal is 24V, then the resistors in the connection figure are 2KΩ.

Current Regulation

There is a red 8-bit function setting switch at the top of the driver, which is used to set the working mode and parameters of the driver. Please carefully read the reference before use. Do remember to cut off the power before changing the settings of the DIP switch.

The front view of the DIP switch is as follows:

DIP6	DIP7	DIP8	Output Current

OFF	ON	ON	4	4
ON	OFF	ON	8	5
OFF	OFF	ON	16	10
ON	ON	OFF	32	25
OFF	ON	OFF	64	50
ON	OFF	OFF	128	100
OFF	OFF	OFF	256	200

* N/A indicates invalid. The rotary switch is forbidden setting as N/A.

Instructions for rotary switch setting

Function setting:
 Input signal mode selection: SW5=OFF: Single pulse input (PLS+DIR); SW5=ON: Double pulse input. (CW/CCW)
 Automatic half-current: SW6=ON: valid. SW6=OFF: invalid.
 Test running: SW4=ON, SW2=ON, others are OFF: valid.
 Micro-step smooth filter: SW4=ON, SW1=ON, others are OFF, after re-power driver, Micro-step smooth filter will start working; SW3=ON, SW1=ON, others are OFF, after re-power, Micro-step smooth filter will stop working.

Subdivision setting			SW1=ON	SW1=OFF	Current setting			SW10=ON	SW10=OFF
SW2	SW3	SW4	Subdivision		SW7	SW8	SW9	Current (Peak, unit:A)	
ON	ON	ON	2	5	ON	ON	ON	2.4	5.6
OFF	ON	ON	4	10	OFF	ON	ON	2.8	6.0
ON	OFF	ON	8	20	ON	OFF	ON	3.2	6.4
OFF	OFF	ON	16	25	OFF	OFF	ON	3.6	6.8
ON	ON	OFF	32	40	ON	ON	OFF	4.0	7.2
OFF	ON	OFF	64	50	OFF	ON	OFF	4.4	7.6
ON	OFF	OFF	128	100	ON	OFF	OFF	4.8	8.0
OFF	OFF	OFF	256	200	OFF	OFF	OFF	5.2	NA

* DIP switch is forbidden to set as N/A, or the driver will be alarm automatically.

Kinco 2M1180N Stepper Motor Driver (Two-phase Bipolar Micro Step)

Kinco 2M2280N Stepper Motor Driver (Two-phase Bipolar Micro Step)

- High performance, multiple functions, simple operation, cost-effective;
- Automatic parameter adjustable regulation, ensures motor run at optimal performance;
- Supporting driver test running function;
- Supporting phase memory function, driver will record phase position of motor during motor stop to ensure motor not shake when re-power;
- With step smooth filter, can smooth input pulse and reduce the transient motion of motor, make sure motor run more smoothly;
- Supporting automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- Automatic internal high-subdivision conversion technology ensures motor run at optimal subdivision state;
- Opto-isolation ERR signal output with max. current of 10mA;
- Opto-isolation signal input, with pulse response frequency up to 400KHz.

Technical Specifications

Parameter	Value
Input voltage	77~123VAC, (50Hz)
Over-voltage protection	187VDC
Under-voltage protection	90VDC
Output current	4.5A, 5A, 5.5A, 6A, 6.5A, 7A, 7.5A, 8A, total 8 setting values.
Micro step	2/ 4/ 5/ 8/ 10/ 16/ 20/ 32/ 50/ 64/ 100/ 128, total 12 subdivisions.
Adaptable motor	56/86/110 series two-phase bipolar hybrid stepper motors
Input signal	PLS(CW), DIR(CCW), A/B, FREE; Current range: 6~16mA
Control signal mode	PLS+DIR, CW/CCW, A+B
Output signal	ERR, open collector output, maximum current:20mA
Automatic half current	The driver will reduce phase current of the motor by a half in 1.5 seconds
Protection	Overvoltage, undervoltage, short circuit and heat protection.
Dynamic braking circuit *	Absorb regenerated energy of motor by connecting to power resistor. Custom function.
Environment	
Cooling way	Fan cooling
Operation Environment	Avoid the environment with great amount of metallic powder, oil mist, or erosive gases.
Operation humidity	<85%, RH (non-condensing or water drops)
Operation temperature	0°C ~ +40°C
Storage temperature	-20°C ~ +70°C
Weight	1.5Kg
Dimensions	201 x 147 x 66 mm
Ingress protection	IP20

* Please confirm with factory for custom of driver with dynamic braking circuit.

Function of Rotary Switch

S1, Micro-step: switch for subdivision and test running function								
S1	0	1	2	3	4	5	6	7

Kinco 3M458 Stepper Motor Driver (Three-phase)

- The maximum supply voltage is 40VDC;
- The constant current drive mode is taken, with maximum drive current up to 5.8A per phase, which can drive any 57 and 85 series three-phase hybrid stepper motors;
- A dedicated control chip is used. Maximum subdivision is up to 10000step/turn. The subdivision function can be set by the DIP switch, to ensure the best operation stability;
- The driver output phase current of a motor can be regulated through the DIP switch, to match motors of different specifications;
- Supporting automatic half current function of motors in statically locked status, which can greatly reduce heat dissipation of the motors;
- Supporting offline function so that the output current of a motor can be cut off if necessary.

Kinco 3M880N Stepper Motor Driver (Three-phase)

- High performance, multiple functions, simple operation, cost-effective;
- Automatic parameter adjustable regulation, ensures motor run at optimal performance;
- Supporting driver test running function;
- Supporting phase memory function, driver will record phase position of motor during motor stop to ensure motor not shake when re-power;
- Automatic half current function;
- Step smooth filter function, can smooth input pulse and reduce the transient motion of motor, make sure motor run more smoothly;
- Automatic internal high-subdivision conversion technology ensures motor run at optimal subdivision state;
- Opto-isolation ERR signal output with max. current of 20mA;
- Opto-isolation signal input, with pulse response frequency up to 400KHz.

Mechanical Dimensions Unit:mm

Technical Specifications

Supply voltage	24 ~ 40V DC
Output phase current	3.0 ~ 5.8A
Control signal input current	6 ~ 16mA
Protection	Over-voltage, under-voltage, over-current, overheat
Cooling method	Natural air cooling
Operating environment	Avoid the environment with a great amount of metallic powder, oil mist, or erosive gases
Operating temperature	-10°C ~ +45°C
Operating humidity	<85% (non-condensing or water drops)
Weight	0.7Kg

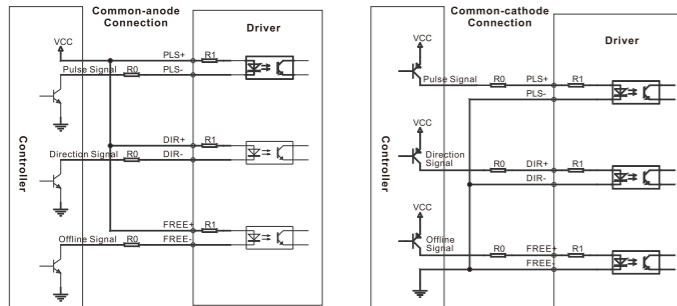

Mechanical Dimensions Unit:mm

Technical Specifications

Input voltage	24~70VDC
Over-voltage protection	90V
Under-voltage protection	15V
Overheat protection	>80°C (Temperature of thermistor)
Phase current (Peak)	2.4/2.8/3.2/3.6/4.0/4.4/4.8/5.2/5.6/6.0/6.4/6.8/7.2/7.6/8.0, total 15 setting values (Unit:A)
Subdivision	400~30000pulse/rev, total 16 subdivisions
Adaptable motor	57 or 85 series three-phase hybrid stepper motor
Input signal	PLS(CW), DIR(CCW), A/B, FREE, Current range:6~16 mA
Control signal mode	PLS+DIR, CW/CCW, A+B
Output signal	ERR, open collector output, maximum current:20mA
Automatic half current	The driver will reduce phase current of the motor by a half in 1.5 seconds
Protection	Over-voltage, under-voltage, over-current, overheat

Typical Wiring Diagram

Precautions

1. Please poke the DIP switch correctly as following figure.

2. When the voltage of the control signal is 5V, then the resistors in the connection figure are 0Ω. When the voltage of the control signal is 24V, then the resistors in the connection figure are 2KΩ.

Rotary Switch Setting

Function setting:

Input signal mode selection:
 SW5=OFF: Single pulse input (PLS+DIR);
 SW5=ON: Double pulse input (CW/CCW).
 Automatic half-current:
 SW6=ON: valid. SW6=OFF: invalid.
 Test running:
 SW4=ON, SW2=ON, others are OFF: invalid.

Functions of DIP Switch

There is a red 8-bit DIP function setting switch in the middle of the connecting terminal at a side of the driver. It can be used to set the working mode and parameters of the driver. Please carefully read the reference before use.

The front view of the DIP switch is as follows:

Serial Number	Function of ON	Function of OFF	Remarks
DIP1~DIP3	Subdivision setting	Subdivision setting	
DIP4	Full current of static current	Half current of static current	
DIP5~DIP8	Output current setting	Output current setting	

The subdivision setting table

DIP1	DIP2	DIP3	Subdivision
ON	ON	ON	400 steps/revolution
ON	ON	OFF	500 steps/revolution
ON	OFF	ON	600 steps/revolution
ON	OFF	OFF	1000 steps/revolution
OFF	ON	ON	2000 steps/revolution
OFF	ON	OFF	4000 steps/revolution
OFF	OFF	ON	5000 steps/revolution
OFF	OFF	OFF	10000 steps/revolution

Current Regulation

There is a red 8-bit DIP function setting switch in the middle of the connecting terminal at a side of the driver. It can be used to set the working mode and parameters of the driver. Please carefully read the reference before use.

The front view of the DIP switch is as follows:

The output phase current setting table

DIP5	DIP6	DIP7	DIP8	Output Current
OFF	OFF	OFF	OFF	3.0A
OFF	OFF	OFF	ON	4.0A
OFF	OFF	ON	ON	4.6A
OFF	ON	ON	ON	5.2A
ON	ON	ON	ON	5.8A

Subdivision setting (Unit PULSE/REV)					Current setting (Peak, Unit: A)				
SW1	SW2	SW3	SW4=ON	SW4=OFF	SW7	SW8	SW9	SW10=ON	SW10=OFF
ON	ON	ON	400	4000	ON	ON	ON	2.4	5.6
OFF	ON	ON	500	5000	OFF	ON	ON	2.8	6
ON	OFF	ON	600	6000	ON	OFF	ON	3.2	6.4
OFF	OFF	ON	800	10000	OFF	OFF	ON	3.6	6.8
ON	ON	OFF	1000	12800	ON	ON	OFF	4	7.2
OFF	ON	OFF	1200	20000	OFF	ON	OFF	4.4	7.6
ON	OFF	OFF	2000	25600	ON	OFF	OFF	4.8	8
OFF	OFF	OFF	3000	30000	OFF	OFF	OFF	5.2	NA

Kinco 3M2280N Stepper Motor Driver (Three-phase)

- High performance, diverse functions, simple operation, cost-effective;
- Automatic parameter adjustable regulation;
- Driver test running function;
- Phase memory function;
- PLS+DIR and CW/CCW control signal available;
- Opto-isolation ERR signal output;
- The driver will reduce the phase current of the motor by a half in 1.5 seconds;
- Opto-isolation signal input, with pulse response frequency up to 400 KHz;
- 14 micro-step value, the maximum micro-step value is 20000 pulse/rev. The maximum output phase current is 8A(Peak);
- With the protection function of over-voltage, under-voltage, over-current, overheat and phase dislocation;
- With step smooth filter, can smooth the input pulse, reduce the transient motion of motor, make the motor runs more smoothly.

Technical Specifications

Input voltage	220V AC ± 15% (50Hz)(187~253VAC)
Over-voltage protection	395VDC
Under-voltage protection	200VDC
Phase current (peak, unit: A)	2.8, 3.2, 3.6, 4.0, 4.4, 4.8, 5.2, 5.6, 6, 6.4, 6.8, 7.2, 7.6 8.0, total 14 setting values.
Micro step (unit: pulse/rev)	400, 500, 600, 800, 1000, 1200, 1500, 2000, 3000, 4000, 5000, 6000, 10000, 20000, total 14 subdivisions.
Adaptable motor	110 and 130 series three-phase hybrid stepper motor
Input signal	Three control signal ports: PLS(CW)/DIR(CCW)/FREE; current range: 6 ~16mA
Control signal input method	PLS+DIR; CW/CCW, A+B
Output signal	ERR, open collector output, max current: 10mA
Automatic half-current	The driver will reduce the phase current of the motor by a half in 1.5 seconds
Protection	Over-voltage, under-voltage, short circuit, and overheat protection
Dynamic braking circuit*	Absorb regenerated energy of motor by connecting to power resistor. Custom function.

Cooling method	Forced air cooling	
Environment	Operation environment	Avoid the environment with great amount of metallic powder, oil mist, or erosive gases.
	Operation humidity	<85%, RH (non-condensing or water drops)
	Operation temperature	0°C ~ +40°C
	Storage temperature	-20°C ~ +70°C
Weight (net)	1.5Kg	
Dimensions	201 x 147 x 66 mm	
Ingress protection	IP20	

S1, Micro-step: switch for subdivision and test running function

S1	0	1	2	3	4	5	6	7
Pulse/rev	400	500	600	800	1000	1200	1500	2000
S1	8	9	A	B	C	D	E	F
Pulse/rev	3000	4000	5000	6000	10000	20000	SET1	SET2

S2, Current: switch for current and PLS/DIR, CW/CCW setting

Mode	PLS+DIR							
S2	0	1	2	3	4	5	6	7
Peak(A)	2.80	3.20	3.60	4.00	4.40	4.80	5.20	5.60
Rms(A)	1.98	2.26	2.55	2.83	3.11	3.39	3.68	3.96
Mode	CW/CCW							
S2	8	9	A	B	C	D	E	F
Peak(A)	6.00	6.40	6.80	7.20	7.60	8.00		
Rms(A)	4.24	4.53	4.81	5.09	5.37	5.66	M1	M2

Mechanical Dimensions Unit:mm

Operation Table

Mode	S1	S2	Method
Auto Run	F	0~D	Set the s1&s2 as S1=F,S2=0~D when driver is power off, then power on the driver, the motor will run automatically.
PLS+DIR	E	E	
CW/CCW	E	F	Set S1 and S2 as the "MODE settings (as the left table)" when driver is power off, then power on the driver, the 4 standards LED will run as: , this means the mode setting is success, then reboot the driver, the driver will work in setting mode.
HALF CURRENT	E	C	
FULL CURRENT	E	D	
Step smooth filter enable	F	F	Enable smoothing acceleration/ deceleration function.
Step smooth filter disable	F	E	Enable immediately response mode.

Kinco FM860 Field bus Stepper Driver (Two-phase / Three-phase)

- 6 opto-isolation digital input channels, 3 channels support voltage range 5~24VDC;
- 3 opto-isolation digital signal output channels, max current 100mA;
- 1 analog signal input channel(±10V) speed control;
- Support PLS+DIR, CW/CCW and A+B signal;
- Opto-isolation CAN and RS485 interfaces;
- Support CANopen and Modbus protocol;
- Multiple I/O functions, support homing, multi-speed;
- Support automatic parameter adjustable regulation, self-defined half-loack, step smooth filter;
- Over-voltage, under-voltage, overheat and over-current protection;
- Support RS232 communication, parameter settings by KincoStep software;
- CE and RoHS.

Mechanical Dimensions Unit:mm

Technical Specifications

Input voltage	24 ~ 70VDC
Over-voltage protection	90V
Under-voltage protection	15V
Phase current (Peak)	0 ~ 6A
Subdivision	Set by "KincoStep" software
Adaptable motor	56/86 series two-phase or 57/85 series three-phase hybrid stepper motor
Control signal mode	PLS+DIR, CW/CCW, A+B
Cooling method	Natural air cooling
Operation environment	Avoid the environment with a great amount of metallic powder, oil mist, or erosive gases.
Operation humidity	<85%, RH(non-condensing or water drops)
Operation temperature	0°C ~ +40°C
Storage temperature	-20°C ~ +70°C
Weight	0.36Kg
Dimensions	134.5x 75.5 x 34mm
Ingress protection	IP20

Note: The communication cable is suggested to purchased with the first order.
Model: Console configuration cable (conversion cable RS232-to-RJ45)

Introduction of Interface

Interface	Symbol	Function
X1 (Field Bus)	SW7~SW8	Switches for setting 2-wire or 4-wire RS485
	SW9~SW10	Switches for terminal resistor setting
ID DIP	X1A(IN)X1B(OUT)	CAN bus or RS485 interface
	SW1~SW6	ID rotary switch
X2	RS232	RS232 interface
X3 (IO)	DIN1+	DIN1 positive
	DIN1-	DIN1 negative
	DIN2+	DIN2 positive
	DIN2-	DIN2 negative
	DIN3+	DIN3 positive
	DIN3-	DIN3 negative
	DIN4	DIN4 input
	DIN5	DIN5 input
	DIN6	DIN6 input
	COMI	Common port of DIN4, DIN5, DIN6
	AIN1+	AIN1 differential signal positive
	AIN1-	AIN1 differential signal negative
	GND	Common port of AIN1 and logic power supply
	5VDC	5VDC Logic power output
24VDC	24VDC Logic power input	
OUT1	OUT1 output	
OUT2	OUT2 output	
COMO	Common port of OUT1 and OUT2	
OUT3+	OUT3 positive	
OUT3-	OUT3 negative	

Kinco Two-phase Stepper Motor /42 Series

Kinco Two-phase Stepper Motor /56 Series

Note: Where, the shaft diameter of 2S56Q-030B5 is 8mm.

Technical Specifications	2S42Q-03848	2S42Q-02940

Denomination Rules of Stepper Driver

Guide to stepper driver selection

Stepper motor needs to be driven by stepper driver, which is one of the key parts of stepper system. Stepper driver control the coil current of the stepper motor by sending pulse/direction signal, to realize accurate control of motor position and speed.

Working mode of stepper driver

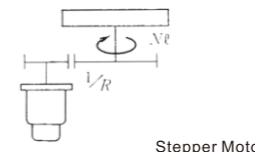

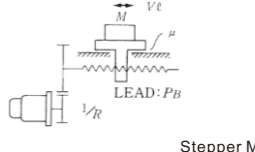

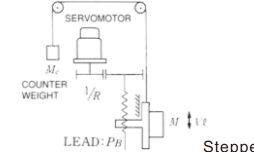

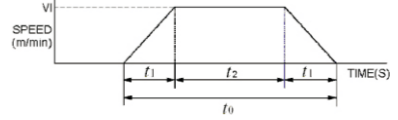

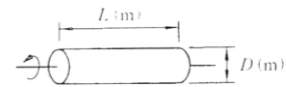

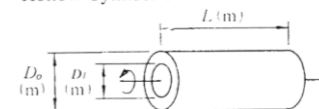

Generally, there are following working modes: whole/full step, half step, subdivision(macro-step). The main difference is in control accuracy of motor coil. Usually, stepper motors vibrate at low frequency. Subdivision setting could improve stability of motor running at low speed.

Denomination Rules of Stepper Motor

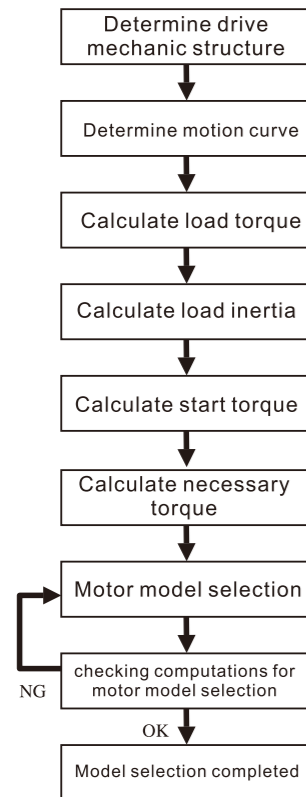

Guide to stepper motor selection

Stepper motor is specialized for positioning and accurate speed control. The main features are "digital" and "error non-accumulative". Stepper motor will turn a fixed angle for each pulse signal sent by stepper driver, so we could control angular displacement through setting number of pulses to realize accurate positioning, meanwhile control motor speed and acceleration through setting pulse frequency. The "error non-accumulative" feature of stepper motor is widely used in open-loop control.

Motion Mode	Rotational Motion	Linear Motion	
		Horizontal axial direction	Vertical axial direction
Mechanical structure	 Stepper Motor	 Stepper Motor	 Stepper Motor
	N : Drive speed (r/min) V : Load speed (m/min) T : Load torque (N.m) f : Friction coefficient P_B : Screw lead (m)	M : Quality of linear motion part (kg) M_C : Weight quality (kg) $1/R$: Gear reduction ratio f : Friction coefficient	
Speed curve			
Single travel(m)		$l = \frac{Vl}{60} (t_0 - t_1)$	
Drive speed(rpm)	Nl	$Nl = \frac{Vl}{P_B}$	$Nl = \frac{Vl}{P_B}$
Rotational speed of motor(rpm)		$N_M = Nl \cdot R$	
Load torque(N.m)	$T_L = \frac{Tl}{R \cdot \eta}$	$T_L = \frac{\mu \cdot g \cdot M \cdot P_B}{2\pi \cdot R \cdot \eta}$	$T_L = \frac{g \cdot (M - M_C) \cdot P_B}{2\pi \cdot R \cdot \eta}$
Load Inertia (kg.m ²)		$J_L = J_{L1} + J_{L2} + J_{L3}$	
	Linear motion	$J_{L1} = M \cdot \left(\frac{P_B}{2\pi R}\right)^2$	$J_{L1} = (M + M_C) \cdot \left(\frac{P_B}{2\pi R}\right)^2$
Rotational motion	Solid cylinder: $J_K = \frac{\pi}{32} \rho \cdot L \cdot D^4$	Solid Cylinder:  density: iron $\rho = 7.9 \times 10^3 (kg/m^3)$ Aluminum: $\rho = 2.7 \times 10^3 (kg/m^3)$	
	Hollow cylinder: $J_K = \frac{\pi}{32} \rho \cdot L \cdot (D_0^4 - D_1^4)$	Hollow Cylinder:  Brass: $\rho = 8.5 \times 10^3 (kg/m^3)$ Nylon: $\rho = 1.1 \times 10^3 (kg/m^3)$	
		Inertia loaded to motor shaft gear input: $J_{L2} = J_K$ Gear output: $J_{L3} = \frac{J_K}{R^2}$	
Start torque(N.m)	$T_S = \frac{2\pi \cdot N_M (J_M + J_L)}{60 \times t_1}$	J_M indicates the inertia of the motor rotator (Unit: kg.m ²)	
Necessary torque(N.m)	$T_M = (T_L + T_S) \times S$	S indicates the safety coefficient, normally 2 ~ 3.	

Model Selection Procedure

(1) Speed curve

$$\text{Acceleration time } t_1 = t_0 - \frac{l}{V_1} = 1.2 - \frac{0.0275}{1.5 \div 60} = 0.1(\text{s})$$

(2) rotation speed of motor

$$N_M = \frac{V_1}{P_b} = \frac{1.5}{0.004} = 375(\text{rpm})$$

(3) Load torque

$$T_L = \frac{\mu \cdot g \cdot M \cdot P_b}{2\pi\eta} = \frac{0.3 \times 9.8 \times 50 \times 0.004}{2\pi \times 0.9} = 0.104(\text{N} \cdot \text{m})$$

(4) Load inertia

$$\text{Linear motion: } J_{LM} = M \left(\frac{P_b}{2\pi} \right)^2 = 50 \times \left(\frac{0.004}{2\pi} \right)^2 = 0.2 \times 10^{-4} (\text{kg} \cdot \text{m}^2)$$

$$\text{Ball screw: } J_B = \frac{\pi}{32} \rho \cdot L_b \cdot D_b^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.4 \times (0.012)^4 = 0.224 \times 10^{-4} (\text{kg} \cdot \text{m}^2)$$

$$\text{Coupler: } J_C = \frac{1}{8} M_c \cdot D_c^2 = \frac{1}{8} \times 0.2 \times (0.04)^2 = 0.4 \times 10^{-4} (\text{kg} \cdot \text{m}^2)$$

$$\text{Load inertia: } J_L = J_{LM} + J_B + J_C = 0.824 \times 10^{-4} (\text{kg} \cdot \text{m}^2)$$

(5) Motor torque

$$\text{Start torque } T_S = \frac{2\pi N_M (J_M + J_L)}{60t_1} = \frac{2\pi \times 375 \times (J_M + 0.824 \times 10^{-4})}{60 \times 0.1} = 0.032 + 392.5 J_M (\text{N} \cdot \text{m})$$

$$\text{Necessary torque: } T_M = (T_L + T_S) \times S = (0.104 + T_S) \times 2 = 0.272 + 0.08 \times 10^4 J_M (\text{N} \cdot \text{m})$$

S indicates the safety coefficient, normally 2.

J_M indicates the inertia of the motor rotator (Unit: $\text{kg} \cdot \text{m}^2$)

(6) Motor selection

Based on the above calculation, preliminarily this motor model is selected, i.e., 2S56Q-02741. rotator

$$\text{Inertia } J_M = 0.135 \times 10^{-4} \text{ kg} \cdot \text{m}^2$$

$$T_M = 0.272 + 0.08 \times 10^4 \times 0.135 \times 10^{-4} = 0.283(\text{N} \cdot \text{m})$$

Refer to the torque-frequency curve of 2S56Q-02741. The output torque of the motor meets the requirements, so this motor is selected.

Example for Model Selection

Speed: $V_1 = 1.5\text{m/min}$

Quality of slide part: $M = 50 \text{ kg}$

Screw length: $L_b = 1.4\text{m}$

Screw diameter: $D_b = 0.012\text{m}$

Screw lead: $P_b = 0.004\text{m}$

Coupler quality: $M_c = 0.2 \text{ kg}$

Outer diameter of coupler $D_c = 0.04\text{m}$

Friction coefficient: $\mu = 0.3$

Movement distance: $l = 0.00275\text{m}$

Motion time: $t_0 = 1.2\text{s}$

Mechanical efficiency: $\eta = 0.9$

Installation Direction

There is no limitation for the installation direction of motors, but normally motors are horizontally installed. They also support vertical downward or upward installation.

Regardless of the installation direction of motors, please do not apply excessive vertical or horizontal load to the shaft of a motor.

Installation

Please install the motor closely on a metallic surface with perfect heat conductivity.

Recommended Motor Installation Position

Motors shall be installed in positions meeting the following conditions:

1. Indoor;
2. The temperature inside the control cabinet shall range from $-10^\circ\text{C} \sim +50^\circ\text{C}$ (non-freezing);
3. The humidity inside the control cabinet shall be less than 85% (non-condensing);
4. Free from erosive gases or dust;
5. Free from water or oil (if available, please install a sheath);
6. Perfect ventilation and heat dissipation.

Note:

Do not disassemble the motor;
Do not apply any impact to the motor shaft;
Do not install the motor in a place where it might bear long-term vibration, so as to avoid any possible damage to the motor shaft.

Aligned Connection of Load

When a load is connected to the motor shaft, make sure that the load shaft aligns with the motor shaft. It is recommended that an anti-backlash flexible coupler or other appropriate devices are used to meet this requirement.

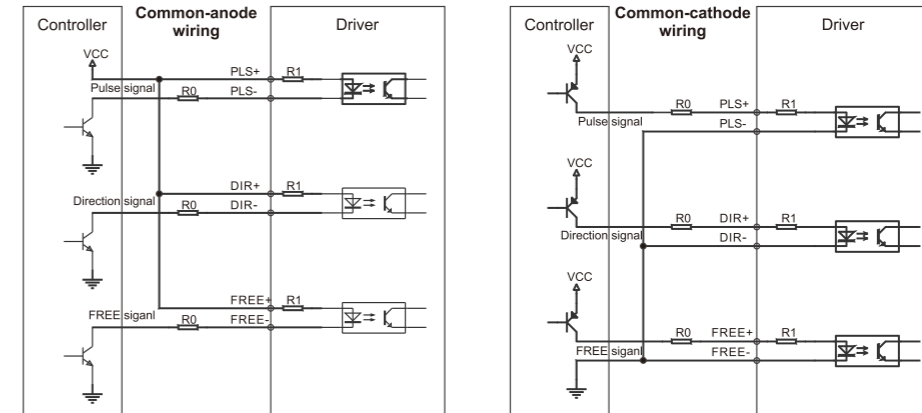

Mechanical processing is forbidden for the motor shaft. Please contact your supplier if it is really necessary.

Note: Red marked driver can drive the corresponding motor, but not recommended;
3M2280N can drive the third-party motors.

1. General Connection Mode of Control Signal

2. Twisted-pair Connection Mode of Control Signal

Note: 1. For 2H1160, 3M880N, FM860, there is no need to connect 2K ohm resistor in the wiring, R0=0;
2. For 2M412, 2M420, 2M530, 2M860, 2M880N, 2M1180N, 2M2280N, 3M458, 3M2280N, 2K ohm resistor is required to be connected serially, R0=2K ohm.
