TUFF DRIVE FNB

FIT THE NEEDS & BILLS.....

TUFF DRIVE Extra Power V-Belts are manufactured with selected raw materials conforming to specific quality standards. TUFF DRIVE V-belts are manufactured with ISI mark under BIS standard 2949 Part 1 and also conforms to BS 3790.

TUFF DRIVE Extra Power V-Belts are subjected to Statistical Process Control during manufacturing which ensures defect free and long-lasting services by these belts.

Highest Grade Dipped Polyester Cord is used to ensure minimum elongation. Chemically treated and rubber extruded cord ensures dynamic bonding between cord and other components of the belt.

Cot fabric is high quality Polyester-cotton fabric with high thread counts and lower gauge and Fabric is calendared with 100% Chloroprene Rubber compounds which make TUFF DRIVE Extra Power Belts Heat-Resistant and Abrasion Resistant.

Base rubber compound is formulated to give maximum flexibility while keeping its toughness to suit all type of drives.

TUFFDRIVE Exrta Power Brings together the required combination of best state of the art manufacturing facility, systematic approach, High Quality Raw Materials, Testing Expertise and Process control to achieve our mission "FNB fit the needs & bills".i.e Best Quality & Reasonable price.

KEY FEATURES

HEAT, OIL & ABRASION RESISTANT

EXTREMELY HIGH BONDING BETWEEN ALL THE COMPONENTS OF BELT

HIGHER BREAKING STRENGTH

LOWER ELONGATION AT BREAK

LOWER ELONGATION AT PARTICULAR LOAD

JACKET FABRIC COVERED WITH 100% CHLOROPRENE RUBBER BASED COMPOUND

DO'S :

1. Ensure Perfect Alignment of Pulleys:

- Proper alignment between pulleys is crucial for optimal belt performance. Misalignment can lead to premature wear and reduced efficiency.

2. Inspect Grooves & Pulleys Regularly:

- Keep the grooves free from burrs, sharp edges, rust, oil, and grease. Regularly inspect pulleys for wear & tear and ensure they meet international standards.
- Use guards to prevent contamination and damage to the belt.

3. Use Belts from the Same Manufacturer:

- When using multiple belts in a drive, ensure they are from the same manufacturer.
- For best results, use matching sets of belts.

4. Select the Right Number of Belts :

- In multiple drives, use as many V-belts as required for better service life and low maintenance costs.
- Replace the entire set if one belt fails.

5. Use Proper Installation Tools :

- Use drive take-up and installation allowances to mount belts easily without prying or rolling them into the grooves.

DON'TS :

1. Don't Lubricate V-Belts:

- V-belts should not be lubricated. Lubrication can cause slippage and reduce belt effectiveness.

2. Avoid Prying or Rolling Belts into Grooves:

- Never use a screwdriver or pry bar to force belts into pulley grooves.
- Doing so can damage the cords internally and shorten belt life.

3. Avoid Mixing Belts:

- Do not mix belts from different manufacturers in a multiple belt drive.

4. Avoid Over-Tensioning:

- Do not over-tension the belts as it can cause excessive wear and reduce the life span

5. Prevent Contamination:

- Keep belts away from contaminants like oil, grease, and chemicals that can degrade the material
