

Calibration Gas Cylinder - 10 L

This image shows a 10 L calibration gas cylinder with a durable metallic body and label area. It is commonly used for calibration of gas detectors and analyzers in laboratories, industrial plants, environmental monitoring, and safety applications. Typical features include high-purity calibration gas (up to 99.99%), 150 Bar filling pressure, 200 Bar working pressure, and an approximate filled weight of 13 kg.
