

SANDHYA FLEX RUBBERS & PVC PRODUCTS

AN ISO 9001:2015 Certified Company

PVC WATER STOPPER AS PER IS:15058

Make: "SANDHYAFLEX"

THREE TYPES of PVC WATER STOPPER

- **PVC WATER STOPPER WITH CENTER BULB**
- **PVC WATER STOPPER DUM-BELL TYPE**
- **PVC WATER STOPPER KIKER TYPE**
- **COLOR-BLACK, WHITE and BLUE**

Nature of BUSINESS: Manufacturing, Supplier and Exporter of PVC Water Stopper as per IS:15058

PVC Water stopper with Excellent Elasticity and Corrosion Resistance

PVC water stopper, also called PVC water stop seal or PVC water stop belt, is manufactured from superior grade polyvinyl chloride resin and various chemical additives by the process of mixing, granulating and extrusion. It is used to prevent leakage and permeation in construction joint by taking full advantage of polyvinyl chloride resin property of good elastic deformation. It is highly resistant to corrosion and it has excellent durability. PVC water stops are mainly used for tunnels, bridges, storage tanks, water and waste water treatment plants, dams, culverts and other places

PVC Water Stop Seals are profiles based on specially formulated plasticized PVC compound. These are designed to meet specific requirement of building industry. **PVC Water stop Seals** are the benchmark for the industry and are up to BIS Certification. The versatility of PVC has made these **PVC Water Stop Seals** popular with specifiers and engineers.

Features of PVC Water Stopper

Outstanding Physical Properties

Excellent Inherent Elasticity

Resistance to many Waterborne Chemicals

Manufacturer, Supplier and Exporter of Rubber and PVC Products.

SANDHYA FLEX RUBBERS & PVC PRODUCTS

AN ISO 9001:2015 Certified Company

PVC WATER STOPPER AS PER IS:15058

Applications:-

Strategic concrete structure such as Dams, Canals, Over Head/Under Ground Water Tanks, Swimming Pools, Basement, Bridges, Road Embankments, Retaining Walls, High Rising Multi Storied Buildings, Waste water and water treatment facilities, Tunnels and Culverts, Foundations, Primary and Secondary Containment Structures

SANDHYAFLEX provides a wide range of PVC Water stoppers in various styles and sizes. Choosing the correct Water stoppers begins with determining whether the joint is Moving or Non Moving. The various types of Water stopper Seals available are:

- *Re-place able Type
- *Ribbed Type
- *Dumb- Bell Type
- *Kicker Type

SANDHYAFLEX PVC Water Stops are profiles based on specially formulated plasticized PVC composition. PVC Water Stopper is used in concrete masonry construction of hydraulic structures to safeguard from hydrostatic pressure and water seepage. Water Stopper also withstands expansion and contraction of joints as well takes care of any deflection and displacement arising due to change in temperature or settlement of foundation eliminating dangers of cracks since these is engineered as water tight seals in poured concrete structures. After being embedded in concrete, PVC water stops fill up the joints to form a continuous watertight diaphragm that prevents the passage of fluid.

Most popular way of the placement of the water stop seal is tied to the steel frame works or small eyelet by means of small wires, certain metal clamps made to grip the water stop seal to keep it in proper position. The water stop must be designed and installed properly to accommodate joint expansions, contraction and lateral & transverse movements. In addition to these considerations, the water stop must be compatible with the concrete system and the liquids and chemicals to be contained or controlled. The basic kind of water stops, suggested normally for use in construction joints where movement is not expected, is the basic type of flat ribbed water stopper, However the ribbed type with canter bulb is used in expansion joints where movement is likely to occur.
