Applications:

A back-up alarm is a great lifesaving addition to any automobile since it is intended to alert passers-by and other motorists that a vehicle is moving in the reverse mode. Delivering the ultimate in safety and functionality, this acoustic device produces a powerful alerting sound with a dominant frequency to immediately capture the attention of people nearby and prevent accidents. Back-up alarms are designed for a broad range of applications and are used on most commercial vehicles to increase safety and reduce reversing fatalities.
