

Axygen

Genomics Liquid Handling Selection Guide Issue 1

AXYGEN[®]

A Corning Brand

Introduction

Corning® is pleased to present Axygen® brand laboratory and genomics liquid handling products. In this guide, you will find a comprehensive portfolio of high-quality plastic consumables, reagent kits and devices designed to improve your process efficiency.

Corning's 150 years of expertise in materials science and process engineering combined with Axygen's in-house capabilities to design, make and maintain molds in one location ensure the highest quality and consistency. We use automated systems to consistently rack, filter and assemble products and eliminate human contamination. Our technical experts understand application workflows and can provide advice and training for your specific technical and process questions.

Each and every lot of our product, regardless of packaging format, both sterile and nonsterile, is tested and certified by Axygen's modern microbiology laboratory. Completely equipped with the latest instruments and technology from the most trusted manufacturers, this facility, was the first of its kind in our industry. This experience, combined with an uncompromising commitment to quality, ensures that Axygen applies the most stringent testing standards to certify products to be DNase-/RNase-free and nonpyrogenic.

In addition to being ISO 9001:2008 and ISO 13485:2003 compliant our manufacturing utilizes "clean techniques" in sealed positive pressure, clean areas. Resins used by Axygen are USP Class IV or IV compliant, RoHS compliant and do not exceed the designated levels of restricted substances as defined in the European Directive 2002/95/EC. Axygen also certifies that none of Axygen products contain Substances of Very High Concern (SVHC) as listed by the European Chemicals Agency (ECHA) under the provisions of Regulation (EC) No. 1907/2006 of the European Parliament and of the council concerning the Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH) per the ECHA 19/12/2011 and previous updates. In addition, heavy metals are not used in the manufacture of or the formulation of this product and products meet the CONEG requirements of less than 100 ppm by weight for lead, mercury, cadmium and hexavalent chromium.

We welcome both formal and informal site visits and audits. We make available to our customers lot-specific Certificates of Compliance. Certificates of Compliance and SDS information can be obtained by visiting 'Request a Certificate' on our website at www.axygen.com.

For up-to-date information on Axygen products and services, go to www.axygen.com where you can access:

Beginning-to-end Solutions for Genomics

From collection to analysis, our technical experts understand your challenges and your need for simplified, efficient genomics workflows from low to high throughput processes. A combination of global manufacturing expertise, extensive use of in-house automation, an unsurpassed commitment to product innovation and a thorough understanding of your processes enables Corning to offer a beginning-to-end portfolio of high-quality, reliable consumables and reagents for genomics workflows.

Product Ordering Information

Minimum Orders

There is a minimum order for all orders placed in the United States and Canada of \$500 (USD). The minimum order for all other countries is \$3000 (USD). Minimum orders for all individual items is "one" case.

Ordering and Technical Information

All orders can be placed with your Axygen® account manager or local distributor. For a list of distributors, visit the website at www.axygen.com. Additional inquiries can be made with our facility by phone +1.510.494.8900, by fax +1.510.494.0700 or via email: axgsales@corning.com

Shipments

All orders placed with Axygen are shipped ex-works Union City, California USA.

Returns

Product returns are accepted only by prior authorization. Unauthorized returns will be sent back to sender. Please contact Axygen Customer Service for forwarding instructions. We do not accept product returns from shipments which were made more than 90 days prior to the request date (120 days for international shipments). A 20% restocking fee may apply to return requests.

Freight Claims

Shipments always leave our warehouse in good condition. If a carton is received which is in poor condition, it should be refused or be noted on the Bill of Landing at the time of delivery. Also, if a carton is missing, it should be noted on the Bill of Landing. It is your responsibility to file any freight claims with the carrier, usually within 10 days of delivery and to collect from the carrier any money owed.

Disclaimer

Our products are intended for use within the research laboratory setting. Axygen makes no warranty of merchantability of fitness for particular use of any product it manufactures or sells. It is up to the individual user to validate all products prior to running any protocol or experiment. Under no circumstances shall Axygen be held liable to the customer or any other party for any direct or indirect damages, including, but not limited to personal injury, property damage, special, consequential, indirect or punitive damages or lost profits (or other economic loss) resulting from the use or inability to use this product, even if such losses or damages are reasonably foreseeable.

In the event that this product fails to conform to Axygen's specifications, Axygen will, at its option, provide a free replacement or grant an appropriate credit. The warranty and remedies provided in this section shall apply to the exclusion of any other warranties (express or implied, including the warranties of merchantability and fitness for a particular purpose) or remedies that might otherwise be available under applicable law.

Axygen is a registered trademark of Axygen, Inc. All other trademarks are the property of their respective owners.

Technology Overview

Maxymum Recovery tip after dispensing 100 µL sample.

Conventional tip after dispensing 100 µL sample.

Maxymum Recovery®

Utilizing a unique manufacturing process, the Axygen® Maxymum Recovery range offers an innovative series of pipet tips, filter tips, PCR products and microcentrifuge tubes that feature ultra-smooth surfaces.

A properly maintained and calibrated pipettor is capable of delivering fluids within 1% of the requested volume. However, variations introduced as a result of poor performance from inferior tips can increase the error rate. Count on Axygen's Maxymum Recovery pipet tips to optimize accuracy for your most critical applications.

- ▶ Ultra-smooth surfaces
- ▶ Exclusive molding technology
- ▶ Reduced sample loss to save on costly reagents
- ▶ Maximizes accuracy and precision

What does this mean to you?

Surface Comparison of Polypropylene Materials

These images show a visual comparison of a Maxymum Recovery pipet tip internal surface compared to the surface of both standard polypropylene pipet tips and siliconized pipet tips. The photographs below were taken of the internal surface of sections cut from three styles of pipet tips, via SEM/EDS. Magnification levels ranged from 50x to 5,000x.

Figure 1a: (50x)

Figure 1b: (500x)

Figure 1c: (5000x)

Figure 2a: (50x)

Figure 2b: (500x)

Figure 2c: (5000x)

Figure 3a: (50x)

Figure 3b: (500x)

Figure 3c: (5000x)

Diamond-Polished Molding Technology

Photographic image of a single molding element at 5x shows the mirror-like finish typical of all Axygen molds. Such smooth surfaces facilitate the release of the tip from the mold, eliminating the need for releasing fluids which can cause contamination.

- ▶ No mold-releasing agents used
- ▶ Contamination-free
- ▶ Reduced sample loss
- ▶ Optimized performance
- ▶ Available on automation/handheld tips, PCR and microcentrifuge tubes

Maxymum Recovery Pipet Tips

The Axygen Maxymum Recovery surface, even at the highest magnification level, the ultra-smooth surface is visibly free of occlusions and cavities which can cause sample retention and sample denaturation in standard polypropylene. See Figures 1a, 1b, and 1c.

Conventional Pipet Tips

The internal surface of a standard polypropylene pipet tip shows occlusions and cavities can be seen on the wall surface. At the highest magnification, surface strands, which cause samples to 'stick', are clearly visible. See Figures 2a, 2b, and 2c.

Siliconized Pipet Tips

The siliconized pipet tip shows a lack of smoothness of the walls created by an inconsistent and uneven flow of silicone upon the surface. Sample retention occurs even with siliconized pipet tips. See Figures 3a, 3b, and 3c.

7 Reasons to Choose Axygen® Automation Tips

- 1 AUTOMATED ASSEMBLY**
Ensures product is free from contamination.
- 2 ELECTRONIC MONITORING OF MANUFACTURING**
Advanced technology supported by experienced personnel results in high-quality products.
- 3 IN-HOUSE MOLD MAKING**
Engineering team has tremendous expertise in designing and creating molds that produce consistent, high quality products.
- 4 IN-HOUSE TESTING**
In-house automation lab allows product to be validated prior to release.
- 5 UNIQUE TECHNOLOGY**
Available in Maxym Recovery® to further improve accuracy and precision while reducing sample wastage.
- 6 CUSTOMER SITE TESTING OF NEW PRODUCTS**
All products are validated at customer locations to ensure proper function.
- 7 BROAD PRODUCT OFFERING**
Axygen routinely offers tips not offered by the robotic workstation manufacturer.

Axygen Automation Tips

Axygen brand automation tips are engineered to the exact specifications of the original equipment manufacturers' tips, ensuring complete compatibility and a consistent fit. One of the widest product offerings combined with our engineering expertise stringent QA/QC enables you to get optimum performance no matter which automated liquid handler you are working with.

Features

- Engineered to the exact specifications of the workstation vendor's tips to ensure complete compatibility and consistent fit.
- Wide product offering combined with in-house engineering expertise guarantees optimum workstation performance.
- Complete control of manufacturing process from in-house molding to the most stringent QA and QC testing processes in the industry ensures defects are eliminated.
- Maxym Recovery available in most tip styles for the ultimate in precision and accuracy
- Unsurpassed straightness – hit every well, every time
- Optimized fine point for accurate dispensing
- Filter barrier prevents aerosol and liquid contamination
- Certified DNase-/RNase-free and nonpyrogenic for complete protection against contamination.

AUTOMATION TIPS

Accurate sample delivery is a function of both robotic and tip performance. With the advent of high throughput screening and UHTS, reliable and accurate sample preparation has become more critical than ever. Why risk having your work slowed down and time wasted by defective materials and mediocre performance, when you can place your trust in disposables from a company that offers more? Our expertise in plastic molding has enabled us to create an entire line of Maxymum Recovery® automation tips. Maxymum Recovery virtually eliminates sample retention during aspiration and dispensing for performance that is second to none in the industry.

Compatible with

Aurora Biomed

- ▶ Versa®

Agilent® / Velocity11

- ▶ VPrep®
- ▶ Bravo

Beckman® Coulter®

- ▶ Biomek® FX, Biomek NX & Multimek™

PCR CONSUMABLES

Axygen®'s Extensive Line of PCR Products

Axygen's extensive line of PCR products are specifically designed for use within standard, gradient and real-time PCR applications. A wide variety of sizes, configurations and colors help researchers organize this multi-step process.

Axygen PCR products offer ultra-thin and consistent wall thickness which allows for precise thermal transfer along the entire surface of the tube. The unique cap design ensures a perfect fit to reduce sample evaporation during thermal cycling. Our tubes and plates are manufactured using high-end polished molds and are free from endonucleases, pyrogens, lubricants, dyes, heavy metals and fillers.

Features

- Available in a wide variety of sizes, configurations and colors
- Manufactured from homopolymer
- 0.2 mL and 0.5 mL tubes and PCR microplates fit most popular thermal cyclers (see compatibility chart on page 54-55)
- Ultra-thin and consistent wall thickness allows for precise thermal transfer, leading to shorter cycle times and more consistent results
- Available with domed caps for efficient heat transfer from cycler's lid or flat cap for easy piercing and labeling
- Unique cap design reduces sample evaporation
- Certified to be DNase-/RNase-free and nonpyrogenic
- Barcoding available on skirted plates
- Available in Maxymum Recovery® by special order

Axygen® PCR Tubes

PCR tubes require a thin and consistent wall thickness to reduce the insulating effect of the tube. Axxygen PCR tubes are manufactured to the highest quality standards so your results will be consistent every time. PCR tubes with a short cap may allow for sample evaporation during thermal cycling. Axxygen PCR tubes are sealed with a full-length, even, insertion cap which ensures a tight fit and reduces sample evaporation.

Plate Sealing

Each 'well sealer' incorporates a 'scored' area for puncturing by a syringe needle. This allows samples to be dispensed and/or aspirated even while the AxyMat is in place. Each 'well-sealer,' once punctured, will reseal itself, ensuring an airtight seal to the well.

Axygen offers an extensive array of plate sealing options suitable for any preference or application.

PCR AxyMats™ are research-grade silicone sealing mats designed for long or short-term sample storage and PCR. They are autoclavable and reusable.

Compression and Expansion AxyMats are ideal for sealing plates during thermal cycling. Thicker than PCR AxyMats, these form an optimal seal between the cycler's heated lid and the wells, minimizing evaporation and well-to-well contamination. They are autoclavable and reusable.

Axygen 8-strip caps applied to multi-well microplates offer a quick and effective way to seal selected rows and subsequently access individual wells.

ThermalSeal is ideal for PCR applications as it eliminates evaporation and well-to-well contamination. It is also useful for sample storage and transport. Made of 2 mil pressure-resistant polypropylene film.

AluminumSeal is designed for high throughput screening applications, but is also popular for long-term storage, transport and PCR.

Axygen products are manufactured in a clean, controlled "state of the art" facility and certified DNase-/RNase-free and nonpyrogenic

► Barcoding available on skirted plates

96 Well PCR Microplates and Sealing Mats for 0.2 mL thermal cycler blocks

Axygen® 96 well PCR microplates are designed to fit standard 96 well blocks. The consistent and ultra-thin wall allows precise thermal transfer for optimum results. Microplates can be sealed with 8 or 12 strip caps, AxyMats or sealing film.

PCR CONSUMABLES

Type	Volume	Color	Packaging	Cat. No.	Description
No Skirt, Flat Top, Low Profile	100 µL	Clear	Bulk	PCR-96-LP-FLT-C	96-well, no skirt, low profile

PCR Strip Tubes and Caps

Axygen® thin wall PCR strip tubes are designed to fit a variety of thermal cyclers. The consistent and ultra-thin wall allows precise thermal transfer. An even insertion cap ensures a tight fit to reduce evaporation. Strip tubes are available in an assortment of colors.

Optical flat cap strips feature ultra-clear upper surfaces, ideal for fluorescent luminescent and real-time PCR applications. They offer a light transmittance that is 75% higher than with standard strip caps. Made to seal tube strips and 96 well microplates.

STORAGE

Axygen®'s Extensive Line of Storage Products

Axygen provides researchers with solutions to the challenges in drug discovery. With the ever-growing pressure to find the next blockbuster drug, technicians are faced with the need to screen targets more efficiently against a larger library of compounds. Automation has greatly streamlined many standard lab tasks, including liquid handling and sample manipulation. However, these same methods have also increased the need for precisely engineered and consistently manufactured lab consumables. Count on Axygen to be at the forefront of new product R&D and manufacturing improvements, ensuring your complete satisfaction with every item.

Deep Well and Assay Plates are used for sample collection, in-vitro growth chambers and long-term storage. Made of virgin polypropylene, they offer excellent chemical resistance and will withstand temperatures down to -80°C .

Single Well and Multiple Well Reservoirs are a complete line of reagent vessels in numerous formats for automated and manual applications. All are designed with an ANSI/SBS footprint for compatibility with most automation workstations and are made of virgin polypropylene for excellent chemical resistance.

AxyMats™ are patented sealing mats designed for high throughput screening and storage applications. Made of research-grade silicone, they can be autoclaved. Following a bleach wash and ethanol rinse protocol, they can be reused. AxyMats are pierceable and self-sealing, ideal for automated processes and can be used in sub-zero environments.

Chemically Resistant ImpermaMats™ are a chemical-resistant line of sealing mats made for use in assays involving strong solvents such as DMSO and similarly harsh solvents. Specifically designed for Axygen deep well plates and microplates, they contain no extractables to contaminate samples. ImpermaMats feature a tight seal to the plate to reduce evaporation and well to well contamination. Usable within a wide temperature range, from -80°C to $+121^{\circ}\text{C}$. They are reusable.

Deep Well and Assay Microplates

Axygen® deep well and assay microplates are used for sample collection, in vitro growth chamber and long-term storage. Made of polypropylene. They offer excellent chemical resistance and will withstand temperatures down to -80°C.

- ▶ Standard ANSI/SBS footprint with centrifugation to 4,000 RCF
- ▶ Diamond shaped wells allow complete sample recovery and ultra flat surface ensures proper sealing of heat film

Reagent Reservoirs

Axygen® offers a complete line of single well and multiple well reagent reservoirs which are available in multiple formats for automated and manual use. All reservoirs are designed to comply with ANSI/SLAS 1-2004: microplates - footprint dimensions and are compatible with most automation workstations. Reagent reservoirs are manufactured with virgin polypropylene for excellent chemical resistance.

- ▶ ANSI/SLAS footprint
- ▶ Automation compatible
- ▶ Durable for multiple use and cost effective for single use
- ▶ Various formats for any application

Single Well, 96-Well Reservoir	Maximum Volume	Maximum Volume/Well	Color	Cat. No.	Description
	86 mL	-	Clear	RES-SW96-LP	Reservoir, single well, 96 bottom troughs, low profile
	240 mL	-	Clear	RES-SW96-HP	Reservoir, single well, 96 bottom troughs, high profile

Quantity: 25 reservoirs/case; Sterile reservoirs are available by special order

Single Well, 384 Well Reservoir	Maximum Volume	Maximum Volume/Well	Color	Cat. No.	Description
	92 mL	-	Clear	RES-SW384-LP	Reservoir, single well, 384 bottom, low profile
	170 mL	-	Clear Clear	RES-SW384-FX RES-SW384-FX-SI	Reservoir, single well, 384 bottom, medium profile Reservoir, single well, 384 bottom, medium profile, sterile, individually wrapped
	282 mL	-	Clear	RES-SW384-HP	Reservoir, single well, 384 bottom, high profile

Quantity: 25 reservoirs/case; Sterile reservoirs are available by special order

	-	-	Clear	RES-BAFFLE	Baffle for reservoir
---	---	---	-------	------------	----------------------

Quantity: 10 baffles/unit, 1 unit/case

HIGH THROUGHPUT SCREENING

Single Well, Low and High Profile	Maximum Volume	Maximum Volume/Well	Color	Cat. No.	Description

			Clear	RES-MW4-HP	Reservoir, multiple-well, 4 channel troughs, high profile
	80 mL	10 mL	Clear	RES-MW8-LP	Reservoir, multiple-well, 8 channel troughs, low profile
	240 mL	30 mL	Clear	RES-MW8-HP	Reservoir, multiple-well, 8 channel troughs, high profile
	84 mL	7 mL	Clear	RES-MW12-LP	Reservoir, multiple-well, 12 channel troughs, low profile
	264 mL	22 mL	Clear	RES-MW12-HP	Reservoir, multiple-well, 12 channel troughs, high profile

Quantity: 25 reservoirs/case; Sterile reservoirs are available by special order

Compound Library Storage - Mini Tube System (MTS)

Axygen® MTS are available in 0.65 mL, single mini tube or 1.1 mL, single mini tube. They are also available in 8-strip or 12-strip format. MTS racks are compatible with Beckman Coulter®, Tecan® and other automation workstations.

- ▶ Rack features a one-way lid design and alpha-numeric grid
- ▶ Molded-in condensation rings on the lid minimize cross contamination

Mini Tube System (MTS)	Tube Volume	Packaging	Cat. No.	Description
	1.33 mL	Bulk	MTS-11-C	Mini Tube, single
	1.33 mL	Racked	MTS-11-C-R	Mini Tube, single

Sealing Solutions

Overview	66
AxyMat™ Sealing Mats	68
ImpermaMat™ Sealing Mats	69
Sealing Films	70
PlateMax™ Heat Sealing Film	71
Heat Sealing Film, Roll	72

SEALING SOLUTIONS

For applications ranging from PCR and Real Time PCR to ELISA and cell culture, Axygen films are the easy and cost effective way to seal your plates. Available in sticky sheet format and heat seal sheet or roll formats.

- ▶ Lids are available in polypropylene and polystyrene; lids provide an easy way to cover most microplates
- ▶ An extensive range of ImpermaMats™ offer excellent protection for applications involving aggressive solvents
- ▶ Sealing films offer great economy for disposable use
- ▶ AxyMats™ and ImpermaMats can be reused and are autoclavable
- ▶ Films and mats can be used in a wide temperature range

Plate Sealing

Each 'well-sealer' incorporates a 'scored' area for puncturing by a syringe needle which allows samples to be dispensed and/or aspirated even while the AxyMat is in place. Once punctured each 'well-sealer' will reseal itself, ensuring an airtight seal to the well.

Axygen products are manufactured in a clean, controlled "state of the art" facility and certified DNase-/RNase-free and nonpyrogenic

Axygen offers an extensive array of plate sealing options suitable for any preference or application.

PCR AxyMats™ are research-grade silicone sealing mats designed for long or short-term sample storage and PCR. They are autoclavable and reusable.

Compression and Expansion AxyMats are ideal for sealing plates during thermal cycling. Thicker than PCR AxyMats, these form an optimal seal between the cyclers heated lid and the wells, eliminating evaporation and well-to-well contamination. They are autoclavable and reusable.

Axygen 8-strip caps applied to multi-well microplates offer a quick and effective way to seal selected rows and subsequently access individual wells.

ThermalSeal is ideal for PCR applications as it eliminates evaporation and well-to-well contamination. It is also useful for sample storage and transport. Made of 2 mil pressure-resistant polypropylene film.

AluminumSeal is designed for high throughput screening applications, but is also popular for long-term storage, transport and PCR.

SealPlate is ideal for ELISA/EIA applications. It is a 2 mil polyester based film with acrylic adhesive.

AxyMat™ Sealing Mats

Axygen® AxyMat sealing mats can be used in a wide range of temperatures for PCR and storage applications. AxyMats minimize evaporation and are made of research-grade silicone which can be autoclaved. They can be reused following a bleach wash and ethanol rinse protocol.

Type	Mat Type	Packaging	Description	Cat. No.

Quantity: All Mats = 10 mats/pack, 5 packs/case

ImpermaMat™ Sealing Mats

Axygen® ImpermaMat AxyMat™ sealing mats can be used in a wide range of temperatures for PCR and storage applications. ImpermaMats minimize evaporation and are made of research-grade silicone which can be autoclaved. They can be reused following a bleach wash and ethanol rinse protocol. ImpermaMats are chemically resistant sealing mats that provide a high degree of confidence for storage applications involving more aggressive solvents. They do not contain any adhesives or extractables which could contaminate samples.

- Chemical resistant
- Designed for use with Axygen deep well and assay microplates
- Tight plate seal reduces sample evaporation and well-to-well contamination
- Usable within a wide temperature range, from -80°C to +121°C.
- High contrast alphanumeric grid for easy well identification

PIPET TIPS

Axygen® pipet tips are designed to fit a wide variety of single and multi-channel pipettors. Flexible walls and a series of internal sealing rings ensure a secure fit with less force required to load and eject. Extended length and wide bore styles are also available.

Features

- ▶ Universal Fit Tips - compatible with most research grade pipettors
- ▶ Aerosol Barrier Tips - prevent aerosol and liquid contamination
- ▶ Multiple packaging formats - universal fit and aerosol barrier tips are available in bulk, racked and reloading formats
- ▶ Bevel delivery orifice - reduces sample hang-up and improves pipetting accuracy
- ▶ Graduation Marks - allow a visual confirmation of the pipettor aspiration volume
- ▶ 'Clean-room' Manufacturing Environment - products are certified DNase-/RNase-free and nonpyrogenic
- ▶ Consistent Product Quality - every manufacturing lot undergoes rigorous testing
- ▶ Sterile Products - Universal fit and aerosol barrier tips are available in standard as well as sterile packaging
- ▶ Maxymum Recovery® - allows maximum retrieval of precious samples

Standard bevel tip has larger contact area for reduced pipettor control.

Axygen bevel tip has a smaller contact area for more accurate dispensing.

Axygen Beveled Pipet Tips

The angle on Axygen beveled tips reduces the surface area of the tip with the receiving vessel. This angle combined with an ultra-thin orifice reduces the effect of liquid samples creeping up the side of the tip (capillary effect). By reducing this capillary effect, Axygen beveled tips dispense samples more accurately.

Tip Packaging Options

	Bulk Packaging	Pipet tips are available in bulk-packaged, re-sealable plastic bags - keeping them safe from contamination.
	Hinged Racks	Axygen tip racks in durable polypropylene provide excellent stability on the lab bench. They feature a hinged lid with a snap fastener.
	Stack Racks	Axygen inter-locking stack racks offer tip stability while saving valuable bench space.

Barrier Pipet Tips

Axygen aerosol barrier tips are ideal for molecular and microbiology applications in which carryover contamination can invalidate results and waste time and resources. The filter placement allows plenty of space between the sample and filter, at the maximum rated volume. In case of overpipetting, the sample can be easily recovered by dispensing.

Axygen filters are made of ultra high molecular weight polyethylene (UHMW) and contain no PCR inhibitors. All Axygen filter tips are metal-free and certified to be DNase-/RNase-free and nonpyrogenic. They are packaged in sealed-bottom racks with lids and are available in sterile packaging.

Aerosol barrier tips offer the ultimate in protection against contamination. Their use is particularly appropriate in mission critical applications such as PCR, DNA sequencing and other techniques involving the use of vaporous, radioactive, biohazardous or corrosive materials.

Axygen products are manufactured in a clean, controlled "state of the art" facility and certified DNase-/RNase-free and nonpyrogenic

Tip Refill System

The Axygen® tip refill system contains a durable refill rack that can be easily refilled by hand and is autoclavable. These translucent racks include a color-coded insert for easy tip identification.

- Graduated 200 µL tip, offers visual volume check
- Translucent rack offers tip visibility
- Tip insert ‘clicks’ into rack for added product security
- Color coded insert allows for easy tip identification
- Certified DNase-/RNase-free and nonpyrogenic

PIPET TIPS

Tip Refill System	Volume	Tip Rack	Packaging	Standard Cat. No.
P2/P10 Gilson-style	10 µL		Tip Refill System	RFL-300-C
			Quantity: 2 stacks of 5x 96 tips/pack, 5 packs/case	
Universal Tip, Graduated	200 µL		Tip Refill System	RFL-222-C
			Quantity: 2 stacks of 5x 96 tips/pack, 5 packs/case	
			Empty Racks/Lids	RFL-R*
			Quantity: 10 racks/pack, 5 packs/case	
Universal Tip, Graduated	1200 µL		Tip Refill System	RFL-1200-C
			Quantity: 8x 96 tips/pack, 6 packs/case	
			Empty Racks/Lids	RFL-R-1200*
			Quantity: 10 racks/pack, 3 packs/case	

* RFL-R is suitable for both the 10 µL and 200 µL refill inserts. RFL-R-1200 is suitable for 1200 µL refill inserts.

Microvolume Tips

Microvolume tips are available with Axygen® Maxymum Recovery® technology. Maxymum Recovery improves recovery of costly samples and offers greater precision and accuracy.

Autoclaving Protocol

Autoclave at 121°C (250°F) at 15 psi (1 atm.) for 15 minutes. Do not use a drying cycle. Remove from autoclaving once the temperature has reached at least 80°C.

Autoclaving Caution

Excessive exposure to autoclaving heat may cause warping or decreased structural integrity. Do not exceed autoclaving recommendations.

NOT ALL PRODUCTS ARE AUTOCLAVABLE.

Autoclaving Guidelines

121°C	To ensure successful steam sterilization of your plastic labware, please adhere to the following guidelines:
15 minutes	Autoclave all plastic consumables at 121°C for 15 minutes, 15 psi/1 atm. Do not use a dry cycle as this may cause deformation or weakening of the plastic.
15 psi	Allow temperature within the autoclave to return to at least 80°C before removing the product.

Aerosol Barrier Tips

- ▶ Technologically advanced filter material allows free passage of air while blocking aerosol contamination
- ▶ Filter membrane contains no leachable additives
- ▶ Maxymum Recovery[®] improves accuracy and ensures maximum sample recovery

GEN3™ Multi-Barrier Tips

- ▶ Multi-barrier self-sealing filter prevents aerosol or liquid cross contamination
- ▶ Proprietary filter design prevents possible PCR inhibition
- ▶ Maxymum Recovery® technology for low sample retention and high yield
- ▶ Hinged rack for convenience and ease of use
- ▶ Sterile; no need to autoclave
- ▶ Certified DNase-/RNase-free and nonpyrogenic
- ▶ Certified human gDNA and PCR inhibition free

Performance Comparison of Barrier Pipet Tips

These images show a visual comparison of the Axygen® GEN3 filter pipet tip compared to a conventional filter tip following the over-aspiration of a colored liquid.

GEN3 multi-barrier pipet tips seal on contact with liquids and prevent liquids or aerosols from passing through, eliminating cross contamination.

Liquid passes through conventional filter pipet tips causing cross contamination.

Macrovolume Tips

- ▶ Fit most research grade pipettors

Macrovolume Tips	Volume	Packaging	Cat. No.
5 mL, Macrovolume 	1 - 5 mL	Bulk	T-5000-C
Graduation marks at 0.5 mL and 1 mL increments		Quantity: Bulk = 250 tips/pack, 10 packs/case	
10 mL, Macrovolume 	1 - 10 mL	Bulk	T-10ML-C
		Quantity: Bulk = 200 tips/pack, 10 packs/case	

Gel Loading

Axygen® Gel Loading Tips are designed for easy loading of samples on gels. The tips fit a wide variety of single and multi-channel pipettors. Tips are available in flat and round formats with outer diameter dimensions for specific gel thicknesses.

- 0.37 mm outer diameter tips are for use with 0.4 mm gels
- 0.17 mm outer diameter tips are for use with 0.2 mm gels
- Certified DNase-/RNase-free and nonpyrogenic

Gel Loading Tips	Volume	Tip Rack	Outer Diameter	Packaging	Cat. No.
10 µL, Gel Loading Tip, Flat 	10 µL		0.17 mm	Racked Quantity: Racked = 200 tips/rack, 2 racks/case	TGL-10FT-17-R
200 µL, Ultra Micro Gel Loading Tip, Flat 	200 µL		0.37 mm	Racked Racked, Sterile Quantity: Racked = 200 tips/rack, 2 racks/case	TGL-200FT-37-R TGL-200FT-37-R-S
200 µL, Ultra Micro Gel Loading Tip, Round 	200 µL		0.57 mm	Racked Racked, Sterile Quantity: Racked = 200 tips/rack, 2 racks/case	TGL-200RD-57-R TGL-200RD-57-R-S

Gel Cutting

Axygen® Gel Cutting Tips are designed to remove DNA/RNA bands from agarose gel.

- Certified DNase-/RNase-free and nonpyrogenic

Gel Cutting Tips	Tip Rack	Outer Dimensions	Packaging	Standard Cat. No.
Gel Cutting Tip 		1.1 mm x 4 mm	Bulk Racked Quantity: Bulk = 250 tips/pack, 10 packs/case; Racked = 48 tips/rack, 10 racks/pack, 5 packs/case	TGL-1140 TGL-1140-R
Gel Cutting Tip 		1.1 mm x 6.5 mm	Bulk Racked Quantity: Bulk = 250 tips/pack, 10 packs/case; Racked = 48 tips/rack, 10 racks/pack, 5 packs/case	TGL-1165 TGL-1165-R

AxyPet™ Single and Multi-channel Pipettors

AxyPet pipettors combine the highest levels of accuracy and precision with design innovations intended to make the pipetting experience more comfortable over prolonged use.

- ▶ Locking feature prevents accidental volume changes during pipetting procedures
- ▶ Thumb-friendly soft spring pipetting system reduces fatigue
- ▶ Unique side EZIject button option reduces thumb movement*
- ▶ Finger-hook to take the weight, for a more relaxed grip
- ▶ Large ergonomic pushbutton is easy on the thumb during contact

1-10 mL	1	±2.5 - ±0.5	±0.6 - ±0.2	AP-10ML	1-10 mL Single Channel Pipettor

*Left handed EZIject button available by special order

Additional Multi-channel Pipettor Features

- ▶ Plunger and Ejector are ergonomically located
- ▶ Curved ejector bar allows tips to be ejected in steps, reducing the amount of force required for ejection
- ▶ Tip manifold rotates 360°
- ▶ Each channel of the pipettor has an individual, precision piston assembly to ensure accuracy and reproducibility from one pipetting series to the next
- ▶ Shafts withdraw when pressed against a row of tips
- ▶ Each shaft moves independently, minimizing jamming of tips
- ▶ Micrometer is continuously adjustable for selection of whole or fractional volumes

Microtubes

Overview	98
Snaplock Microcentrifuge Tubes	100
Screw Cap Tubes	102
Caps	104
Centrifuge and Transport Tubes	105
AxyRacks	106

MICROTUBES

Axygen®'s microcentrifuge tubes are produced from Class VI "medical grade" polypropylene.

- ▶ Maxymum Recovery™ and standard snaplock tubes - 0.5, 1.5, 1.7 and 2.0 mL
- ▶ Maxymum Recovery and standard screw cap tubes - 0.5, 1.5 and 2.0 mL conical and free-standing
- ▶ Durable plastic tube racks - 50, 80 and 81 position
- ▶ Aluminum tube racks - 48 position for screw cap tubes

MICROTUBES

MaxyClear SnapLock Microcentrifuge Tubes

Axygen® 1.5 mL, 1.7 mL and 2.0 mL SnapLock microcentrifuge tubes are engineered to close with a snap and stay closed during centrifugation up to 14,000 RCF. The 1.7 mL MaxyClear tubes are manufactured of a co-polymer material which offers exceptional strength and chemical resistance. All Axygen SnapLock microcentrifuge tubes have frosted cap surfaces for labeling, frosted panels on the side for writing, a 0.28 mm piercing port in the center of the cap. Most tubes are autoclavable.

Features

- ▶ MaxyClear for the ultimate in sample visibility found in all of Axygen's SnapLock tubes
- ▶ A wide range of colored tubes for easy sample identification
- ▶ SnapLock tubes are guaranteed to stay closed even during boiling or autoclaving
- ▶ Will withstand up to 14,000 RCF
- ▶ SnapLock cap assures efficient seal yet is still easy to flip open
- ▶ Thin membrane in cap center allows easy access to sample by syringe needle
- ▶ Certified DNase-/RNase-free and nonpyrogenic
- ▶ Maxymum Recovery™ available in most styles for minimal sample retention

MaxyClear Screw Cap Microcentrifuge Tubes

Axygen screw cap microcentrifuge tubes serve a broad range of laboratory needs including collection, processing, centrifugation, long-term storage and packaging/shipping of restriction enzymes and other reagents. Color-coded caps provide a syringe port which is easily pierced for radioisotope labeling and fraction collecting. The threaded O ring design ensures a uniform closure allowing centrifugation up to 14,000 RCF. Ribs are designed to fit racks and facilitate single-handed opening and closing when used with our aluminum AxyRack. See page 149 for information on RCF or g-force.

The closure on Axygen screw caps feature an O ring that is formulated and manufactured from a specially selected material that is resistant to many commonly used laboratory chemicals. The Alignment Orientation Tab allows the microcentrifuge tube to be aligned with the centrifuge rotor for multiple applications, including desalting. This ensures that the microcentrifuge tube can be re-spun without disturbing the partially pelletized sediment.

Axygen products are manufactured in a clean, controlled "state of the art" facility and certified DNase-/RNase-free and nonpyrogenic

SnapLock Microcentrifuge Tubes - MaxyClear

Axygen® MaxyClear microtubes are available in a variety of colors. Maxymum Recovery® and sterile options are also available. SnapLock microtubes have frosted cap surfaces and frosted side panels, ideal for labeling. Each cap features a piercing port in the center of the cap. Microtubes with no caps are available for some sizes.

- ▶ Co-polymer tubes offer exceptional strength and chemical resistance
- ▶ Homopolymer tubes are more resistant to autoclaving
- ▶ 0.6 mL, 1.5 mL, and 2.0 mL microtubes are certified to be boil proof

5 mL Snaplock Tube

- Graduated at 0.5 mL increments
- Available in clear and amber
- Frosted flat cap

Snaplock Macrotubes	Volume	Material	Color	Packaging	Standard Cat. No.
5.0 mL, MaxyClear	5.0 mL	Homopolymer Homopolymer	Clear Amber	Bulk Bulk	MCT-500-C MCT-500-X

Quantity: 250 tubes/pack, 5 packs/case

Tissue Grinder

- Durable and inert polypropylene construction
- Designed to fit 1.5 mL and 2.0 mL centrifuge tubes
- Individually wrapped and sterilized

Type	Volume	Material	Color	Packaging	Standard Cat. No.
Tissue Grinder	1.5 and 2.0 mL	Pestle, sterile	Blue	Individually Wrapped	PES-15-B-SI

Quantity: Individually Wrapped = 100 pestles/pack, 4 packs/case

Autoclaving Protocol

Autoclave at 121°C (250°F) at 15 psi (1 atm.) for 15 minutes. Do not use a drying cycle. Remove from autoclaving once the temperature has reached at least 80°C.

Autoclaving Caution

Excessive exposure to autoclaving heat may cause warping or decreased structural integrity. Do not exceed autoclaving recommendations.

NOT ALL PRODUCTS ARE AUTOCLAVABLE.

Microtube Packaging

Bulk Packaging

Microtubes are shipped in resealable plastic bags and are packed in individual boxes, keeping them free from contaminants and easy to store.

Autoclaving Guidelines

121°C

To ensure successful steam sterilization of your plastic labware, please adhere to the following guidelines:

15 minutes

Autoclave all plastic consumables at 121°C for 15 minutes, 15 psi/1 atm.

Do not use a dry cycle as this may cause deformation or weakening of the plastic.

15 psi

Allow temperature within the autoclave to return to at least 80°C before removing the product.

Screw Cap Tubes

Axygen® screw cap tubes feature a cap that provides a tight secure seal. Screw cap tubes are available in a variety of colors with a conical or self-standing bottom. Sterile options are also available.

GENOMICS SAMPLE PREP SOLUTIONS

Axygen® AxyPrep™ Kits have been adopted by many life science research institutes worldwide. Our bioscience products continue to generate satisfaction and compliments from our customers for their excellent quality and performance. The AxyPrep kits include a full line of plasmid/RNA/genomic purification, viral nucleic acid isolation, PCR clean-up and gel extraction kits. Focusing on improving time and cost reductions within the laboratory, we have expanded our line to include magnetic beads based isolation reagents and the IMAG™ Magnetic Bead Separation Devices (MSDs).

Axygen magnetic bead based isolation features the AxyPrep Mag PCR Clean-Up, AxyPrep Mag PCR Normalizer Kit, AxyPrep Mag FragmentSelect Kit and the IMAG MSDs. AxyPrep magnetic kits utilize a unique paramagnetic bead-based chemistry for the purification and clean-up of nucleic acids for many genomics downstream applications such as DNA sequencing, genotyping and gene expression. Our products are designed to reduce processing time by up to 50%.

IMAG MSDs revolutionize the manual magnetic beads based separation processes used in biological research, including nucleic acid purification and clean-up, cell-based assays, and antibody and protein purification. IMAG MSDs cut total separation process and labor by up to 50%. IMAG MSDs are available in tube (IMAG-12T) or 96 well microplate format (IMAG-96P). They allow manual users to process any magnetic beads-based purification or clean-up process as easily and conveniently as automation users.

For any technical questions, contact us at axgsupport@corning.com.

SAMPLE PREP

Obtaining Pure Nucleic Acids from your Sample is Precious

The purification of high quality of DNA/RNA is the first essential step for any genomics-based downstream application. Poor quality may contribute significantly to the failure of your downstream application and thus delaying your research and increasing your overall research cost. Although certain biological samples are not the limiting factor, there are samples that are very difficult to obtain, making them precious. For these precious samples there is a very little room for error and so utilizing a high quality nucleic acid purification technology becomes essential.

The AxyPrep™ nucleic acid purification product line and accessories it does not only provide the end user with high quality DNA or RNA, they also help reduce operational costs significantly. The AxyPrep product line was optimized specially to cater to technically demanding applications with focus on DNA sequencing. Among such products are our AxyPrep FragmentSelect magnetic bead based chemistry and our AxyPrep PCR Normalizer and our line of handheld magnetic separation devices, IMAG™.

AxyPrep™ Mag PCR Clean-Up Kit

The Mag PCR Clean-Up Kit is designed for efficient removal of unincorporated dNTPs, salts and enzymes after any post PCR. These contaminants are detrimental to the success of downstream applications such as genotyping Sanger and next generation sequencing. The AxyPrep Mag PCR Clean-Up Kit utilizes a unique paramagnetic bead technology for quick high-throughput purification of PCR amplicons. AxyPrep Mag PCR Clean-Up utilizes an optimized buffer to selectively bind PCR amplicons of 60-100 bp or >100 bp to paramagnetic beads, providing end users flexibility and high recovery options with efficient primer-dimer removal based on their downstream application needs. The protocol mainly consists of binding, washing and elution steps. Primers, nucleotides, salts and enzymes in PCR mixture are removed during the binding and washing steps. The purified PCR product is essentially free of contaminants.

- Flexible Clean-Up: High recovery of amplicons with the option to choose recovery of >60 bp or >100 bp
- Efficient removal of unincorporated dNTPs, primers, primer dimers, salts and other contaminants
- Manual and automation-compatible protocol
- Processing time: 15 minutes / 96 samples
- No centrifugation or filtration required

Applications

- Sanger Sequencing
- Next Generation Sequencing

AxyPrep™

AMPure XP

MinElute

Efficient Removal of Primer Dimers

Eliminates extra clean-up steps and reduces the potential of sequencing bias. Gel images of post clean-up of an Illumina library post adaptor ligation. The white box demonstrates that AxyPrep Mag Clean-Up results in no primer dimer carry over which can be observed with Agencourt AMPure and Qiagen MinElute.

Magnetic Beads Kits	Kit Size	Cat. No.
AxyPrep Mag PCR Clean-Up Kit - 5 mL	110 preps	MAG-PCR-CL-5
AxyPrep Mag PCR Clean-Up Kit - 50 mL	1110 preps	MAG-PCR-CL-50
AxyPrep Mag PCR Clean-Up Kit - 250 mL	5550 preps	MAG-PCR-CL-250

AxyPrep™ Mag PCR Normalizer Kit

The AxyPrep Mag PCR Normalizer Kit utilizes a paramagnetic bead-based purification system for post PCR clean-up. AxyPrep Mag PCR Normalizer beads have limited binding surface, therefore by limiting the amount of beads added in a given purification reaction, pre-defined amount of DNA can be isolated based on customers need. PCR normalization is accomplished during this purification process so that additional DNA quantification and dilution are not necessary. Time, labor and reagent cost are greatly saved with the AxyPrep Mag unique normalization purification chemistry therefore efficiently streamlining genomics downstream applications. The protocol mainly consists of binding, washing and elution steps and can be performed directly in the thermal cycling plate and requires no centrifugation or filtration. The process can be automated with walk away solution for high throughput applications.

- Dual action: Normalization and post PCR clean-up enables significant reduction in processing and faster turnaround times
- Scalable: Tube, 96 and 384 well plate formats
- Manual and automation-compatible protocol
- Compatible with several downstream applications
- No centrifugation or filtration required

Applications

- Sanger Sequencing
- Next Generation Sequencing

Dual action: Post PCR product normalization and clean-up. Regardless of the post PCR product volume or concentration added to the AxyPrep Mag PCR Normalizer, the output would be a normalized PCR product to the desired concentration without primer dimer, free dNTPs, or salts carry over.

Gel image of various PCR product volumes from a 50 μ L PCR reaction treated with AxyPrep™ Mag PCR Normalizer. Regardless of PCR input, a similar amount of PCR Fragment is recovered.

AxyPrep™ Mag DyeClean Up Kit

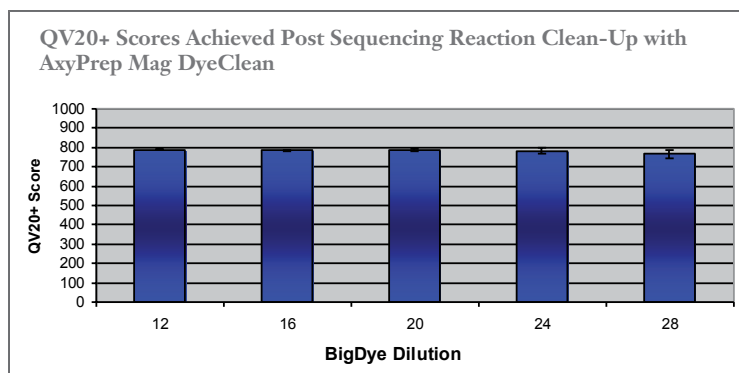

Excess dye terminator clean-up is an essential step prior to sequencing. The carry over of excess dye into sequencing results in dye blobs which leads to overwhelming noise and failed calls of sequenced bases and potentially leading to the failure of the sequencing run. AxyPrep Mag DyeClean utilizes a unique paramagnetic bead-based sequencing purification system optimized for the clean-up of excess dye terminator post sequencing reaction in Sanger sequencing. The protocol mainly consists of binding, washing and elution steps, and can be performed directly in the thermal cycling plate and requires no centrifugation or filtration.

- Saving time and money: Significant BigDye savings without incurring extra cost and processing time with the unneeded BigDye signal enhancer buffer, while maintaining high QV20+ scores
- High signal to noise ratio resulting in long reads and high QV20+ scores
- Suitable for the clean-up of sequencing reaction of different Sanger sequencing based platforms - ABI Prism 3730, 3730xl, 3700, 3130, 31030xl, and 3100 - GE Healthcare MegaBACE
- Simple and easy sequencing reaction clean-up process: 25 minutes/96 samples
- No centrifugation or filtration required

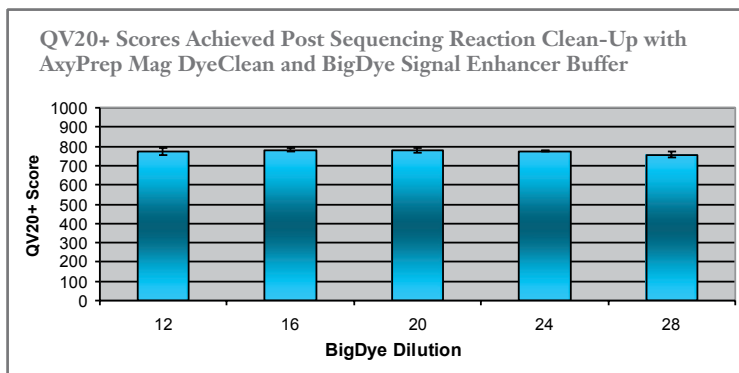

Applications

Sanger Sequencing

Savings Achieved On BigDye Without The Need For A Signal Enhancer While Maintaining High QV20+ Scores

The QV20+ scores achieved indicates that there is no need for the use of the BigDye Signal Enhancer buffer (MCLab) when AxyPrep Mag DyeClean is utilized for the post sequencing reaction clean-up. Sequencing reactions were performed with plasmid and primer provided in the BigDye v3.1 kit. The sequencing reactions contained 250 ng of pGEM 3Zf(+) control plasmid, 3.2 pmol of M13(-21) primer and the indicated amount of BigDye v3.1 in a final volume of 10 µL. The samples were processed on ABI 3730xl.

AxyPrep™ Mag Fragment Selection Kit

Post DNA shearing, the library construction process for next generation sequencing mostly requires fragment selection regardless of the platform. Obtaining high recovery post fragment selection is becoming an important contributor for the reduction of sequencing bias. The AxyPrep FragmentSelect-I Kit is optimized for Illumina next generation sequencing platforms and Life Technologies (SOLiD™) fragment size selection needs in the Roche/454's DNA Genome sequencer library construction workflow. The AxyPrep Mag FragmentSelect Kits utilize a unique paramagnetic bead technology for quick high-throughput optimized DNA size selection suitable for various next generation sequencing platforms.

- ▶ FragmentSelect-I Kit optimized fragment selection chemistries for Illumina and SOLiD
- ▶ Versatile and flexible sequential fragment size selection: No gels needed
- ▶ Efficient removal of primer-dimers: No need for further clean-up steps
- ▶ Manual and automation-compatible
- ▶ Scalable: Tube, 96 and 384 well plate formats
- ▶ No centrifugation or filtration required

Applications

- Illumina Next Generation Sequencing
- Life Technologies (SOLiD) Fragment Size Selection
- Library Construction

Consistently High Amplicon Recovery

The effect of concentration of input DNA on fragment selection measured by Agilent BioAnalyzer on a High Sensitivity DNA chip.

AxyPrep™ Mag Plasmid Kit

RNA Free Kits

The AxyPrep Mag Plasmid purification kit utilizes a magnetic bead technology for high-throughput purification of plasmid DNA from *E.coli* cells. AxyPrep Mag Plasmid Kit can also be used with fosmid and BAC vector-based constructs ranging from 5 Kb to 150 Kb. The system consists of steps of pelleting cells, resuspension, lysis, neutralization, DNA binding, ethanol washing and plasmid elution. The protocol is automation-compatible.

RNA contamination causes inaccurate plasmid yields. No RNA contamination is visible with the AxyPrep Mag Plasmid Kit when compared to the competitor.

Applications

- Fluorescent DNA Sequencing
- Transformation
- DNA Sequencing (including capillary electrophoresis)
- PCR Amplification
- Restriction Enzyme Digestion

Different size plasmid purified with the AxyPrep Mag Plasmid Kit. 1% TBE agarose Gel run at 120 V for 12 minutes. 5 µL loaded on agarose gels. Elution volume = 40 µL, Plasmid Size: 6K

AxyPrep™ Mag Tissue and Blood gDNA Kit

One Kit for Multiple Sample Types

The AxyPrep Mag Tissue gDNA Kit utilizes a magnetic bead-based technology to isolate genomic DNA from rodent tail tissues. This protocol provides instruction to extract gDNA from fresh or frozen rodent tails. The protocol is performed in 96 well format and 1.5 mL tubes. Purification begins by the addition of lysis buffer, and Proteinase K to rupture cell membranes and digest protein. Genomic DNA is then immobilized on magnetic particles by the addition of a magnetic binding reagent. This differential binding allows the gDNA to be easily separated from contaminants using a magnetic field. Contaminants can then be rinsed away using a simple washing procedure.

- Expanded protocol for animal tissue, cultured cells, buccal swabs and blood

Applications

- Restriction Enzyme Digestion
- DNA Sequencing
- Genotyping
- PCR Amplification

AxyPrep™ Mag FFPE (DNA-RNA-miRNA) Kit

The AxyPrep Mag FFPE nucleic acid purification kit utilizes a magnetic beads based technology to isolate nucleic acids (both DNA and RNA) from a maximum input of 10 mg of formalin-fixed, paraffin-embedded tissue. The protocol can be performed in both 96 well plate (manually and automated) and in 1.5 mL tubes. Nucleic acid extraction begins with the addition of a reagent that melts paraffin and de-crosslinks nucleic acids. Proteinase K is then added to complete tissue digestion and inactivate nucleases. Next, binding buffer is added to facilitate immobilization of the nucleic acids to the surface of paramagnetic beads. The contaminants are washed away using a simple washing step.

5 μ L DNA Solution was loaded into each well, Elution Volume = 40 μ L

IMAG™ Handheld Magnetic Beads Separation Devices

The use of magnetic separation devices (MSD) are essential in any paramagnetic bead based purification process. Traditionally, MSDs are not optimized for manual use and most require electrically powered liquid handling systems. IMAG MSDs are available in tube or microplate format and are designed to simplify the manual processing of magnetic bead separations including nucleic acid purification and clean-up, cell based assays, and antibody and protein purifications.

- ▶ IMAG MSDs accommodate single tube or 96 well microplate formats
- ▶ Fast separation time
 - Strong magnets enable less than 30 second separation times
 - Holds tubes or microplate enabling fast wash steps
- ▶ Manual operation enables low or high throughput

Applications

- Nucleic acid purification and clean-up
- Cell based assays
- Antibody and protein purifications

AxyPrep™ Plasmid DNA Purification Miniprep Kit

The AxyPrep Plasmid Miniprep Kit provides a rapid and economical method for the purification of plasmid DNA in a convenient mini column format. Each column can process up to 4 mL of bacterial cultures grown in LB or up to 2 mL of cultures grown in rich broth. The entire procedure can be completed within 20 minutes.

- Rapid spin and vacuum protocols
- No alcohol precipitation
- High yields up to 20 µg
- High-purity plasmid suitable for many applications

ABI PRISM® 3730 data. Big Dye™ v. 3.1

Applications

- DNA Sequencing
- Restriction Digestion
- In Vitro Transcription
- Library screening
- Ligation
- Transformation

AxyPrep™ Plasmid DNA Purification Midiprep and Maxiprep Kits

The AxyPrep Plasmid Midiprep and Maxiprep Kits are based upon a modified SDS-alkaline lysis of bacterial cells in combination with lysate filtration and selective binding of the plasmid DNA to special AxyPrep purification columns. The yield of plasmid for these kits is up to 100 µg. These kits can also be used to isolate large constructs, such as BAC, PAC and P1. The protocols provide a simple, rapid and efficient method for the isolation of highly purified plasmid DNA. The entire preparation process can be completed in 30 minutes. A vacuum manifold is required.

- Rapid spin protocols
- No alcohol precipitation
- High yields: 100 µg to 500 µg
- High purity plasmid suitable for many downstream applications

Applications

- DNA Sequencing
- Restriction Digestion
- In Vitro Transcription
- Library Screening
- Ligation
- Bacterial transformation

AxyPrep™ 96 Plasmid Kit

The AxyPrep 96 Plasmid Kit represents a true high-throughput system for the purification of plasmid or cosmid DNA in a 96 well format. This product is designed to produce up to 20 µg of highly purified plasmid or cosmid DNA (per well) from up to 1.3 mL of bacterial cultures in 96 well format. Two plates rapidly and efficiently process the bacterial lysate, using either vacuum or centrifugation. The Lysate Filtration Plate efficiently removes bacterial cellular debris and transfers the clarified lysate directly into the plasmid plate for desalting. The plasmid is then eluted into a small volume of buffer or deionized water. The highly-purified plasmid or cosmid DNA is free from protein, genomic DNA and RNA. A vacuum manifold and vacuum source are required.

- High-throughput, 96 well plate format
- Two-plate system (lysate filtration and plasmid binding)
- Up to 20 µg of highly purified bacterial plasmid per well
- No alcohol precipitation
- Suitable for automated fluorescent sequencing
- Automation-compatible plasticware
- Rapid spin protocol

Multiple aliquots of plasmid pBS (with 1 Kb insert) grown in JM109 purified with the AxyPrep 96 Plasmid Kit. 1.3 mL of culture processed per well. Approximately 0.3 µg plasmid run per lane on a 1% agarose gel. Axygen 1 Kb ladder included.

Representative ABI PRISM® 3730 data. Big Dye™ v. 3.1.

Applications

Automated fluorescent sequencing on the ABI PRISM DNA Analyzers

In Vitro Transcription

Restriction Digestion

PCR

AxyPrep™ Easy 96 Plasmid Kit

The AxyPrep Easy 96 Plasmid Kit employs an optimized 96 well lysate filtration plate and an alcohol precipitation step to purify plasmid and cosmid DNA from bacterial cultures. The kit is designed to process 1.3 mL aliquots of bacterial cultures, grown in a 96 well format. Plasmid or cosmid DNA prepared by the Easy 96 Plasmid DNA Miniprep Kit is suitable for automated fluorescent DNA sequencing on instruments such as the ABI PRISM 3700 and 3730 DNA Analyzers and the MegaBACE 1000. This kit is also recommended for the purification of large recombinant constructs such as BAC's and P1A. A vacuum manifold and vacuum source are required.

- Lysate filtration followed by alcohol precipitation
- Rapid vacuum and centrifuge protocols
- "Molecular Biology Grade" plasmid DNA suitable for many applications

Multiple aliquots of plasmid pBS (with 1 Kb insert) grown in DH5α purified with the AxyPrep Easy 96 Plasmid Kit. 1.3 mL of culture processed per well. Approximately 0.5 µg plasmid run per lane on a 1% agarose gel. Axygen 1 Kb ladder included.

Representative ABI PRISM® 3730 data. Big Dye™ v. 3.1.

Applications

- Restriction Digestion
- PCR
- Probe Synthesis
- Purification of large recombinant constructs such as BACs and P1A.

AxyPrep™ Multisource Genomic DNA Miniprep Kit

The AxyPrep Multisource Genomic DNA Miniprep Kit is designed to purify gDNA from animal and plant tissues, cultured cells and yeast. Proteins, pigments, carbohydrates and lipids are efficiently segregated from the gDNA by a unique two-phase partitioning technology. Genomic DNA prepared by this method is approximately ≥ 30 Kb in length.

- Expanded protocols for animal and plant tissues, cultured cells, lymphocytes, bone marrow, dried blood, buccal swabs, yeast and filamentous fungi
- High yield of up to 20 μ g of highly purified gDNA
- High molecular weight gDNA ≥ 30 Kb
- Rapid spin and vacuum protocols
- No alcohol precipitation

AxyPrep™ Blood Genomic DNA (gDNA) Miniprep Kit

The AxyPrep Blood gDNA Miniprep Kit is suitable for purifying up to 12 µg of gDNA from 250 µL of whole blood. Blood gDNA is isolated directly from the white blood cell (WBC) component of whole blood, without the need to remove the red blood cells (RBCs) in advance. The isolation of gDNA from blood by this method is based on the efficient release of gDNA from by a special cell lysis and heme/protein precipitation buffer, coupled with the selective absorption of the gDNA to a special AxyPrep column. The purified DNA is approximately ≥30 Kb in length.

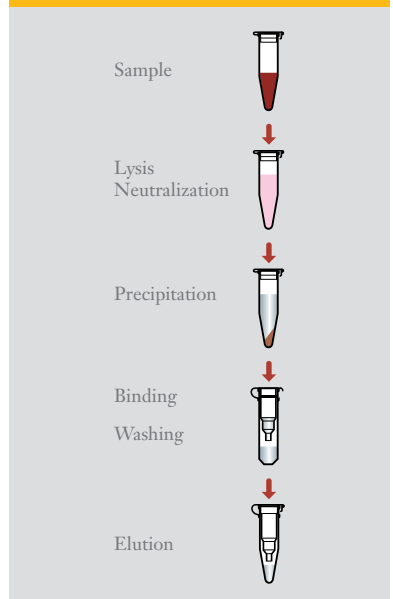

- For fresh, frozen or dried blood samples
- High yield of up to 12 µg of highly purified gDNA
- High molecular weight gDNA product (≥30 Kb)
- Rapid spin protocols
- No alcohol precipitaton
- Purified gDNA is suitable for many downstream applications

AxyPrep™ Blood Genomic DNA (gDNA) MidiPrep and Maxiprep Kits

The AxyPrep Blood gDNA Midiprep and Maxiprep Kits are designed to produce up to 100 µg and 250 µg of high molecular weight gDNA respectively from anticoagulated human or animal blood. Purification is based upon a unique phase-partitioning technology in combination with the selective binding of the genomic DNA to a special AxyPrep column. The purified genomic DNA is ≥30 Kb in size and is particularly well suited for PCR, Southern blotting and other applications requiring highly purified, high molecular weight gDNA. A vacuum manifold and vacuum source are required.

- Rapid protocols for fresh, frozen anticoagulated blood samples
- Unique phase-partition step for higher yield
- No alcohol precipitation
- High molecular weight gDNA suitable for many downstream applications

AxyPrep™ 96 Blood Genomic DNA Kit

The AxyPrep 96 Blood gDNA Kit is a high-throughput purification of gDNA from whole blood in a 96 well format. This kit is based upon the efficient release of gDNA from anticoagulated whole blood by a special cell lysis and protein-removal buffer in combination with Proteinase K digestion. The gDNA is then selectively absorbed onto a special 96 well plate for further purification and desalting. The purified DNA is predominantly ≥ 30 Kb in length, and is suitable for a variety of applications demanding highly purified, high molecular weight gDNA such as Southern blot analysis, PCR, etc.

- Protocols for fresh, frozen anticoagulated blood samples, lymphocytes and cultured cells in a 96 well format
- High yield of up to 10 μg of highly purified gDNA per well
- High molecular weight gDNA product (≥ 30 Kb)
- Rapid sping protocols
- No alcohol precipitation
- Purified gDNA is suitable for many downstream applications

AxyPrep™ Bacterial Genomic DNA (gDNA) Miniprep Kit

The AxyPrep Bacterial gDNA Kit is suitable for the rapid isolation of up to 20 mg of gDNA from $\sim 10 \times 10^9$ bacterial cells. Following lysis, separation of the gDNA from proteins, polysaccharides and lipids is achieved by a unique phase-partitioning step. The gDNA in the lower phase is selectively bound to a special AxyPrep column for further purification and desalting. The highly purified gDNA is predominantly 30 Kb in length and is suitable for a variety of applications demanding highly purified, high molecular weight gDNA such as PCR and Southern blot analysis.

- High yield fo up to 20 µg of highly purified gram ± bacterial gDNA per prep
- High molecular weight gDNA product (≥30 Kb)
- Rapid spin and vacuum protocols
- No alcohol precipitation
- Purified gDNA is suitable for many downstream applications

AxyPrep™ Body Fluid Viral DNA/RNA Miniprep Kit

This AxyPrep Body Fluid Viral DNA/RNA Miniprep Kit provides a rapid and highly reproducible way to purify viral nucleic acid from 250 µL of body fluid, including plasma, serum, ascites, cerebrospinal fluid, urine and cell cultures supernatants. During lysis, proteins and PCR inhibitors are removed by denaturation and precipitation. Viral nucleic acids remain soluble in the supernatant and are purified by binding to a special AxyPrep column. After brief washes to remove residual impurities and salt, the purified viral nucleic acid is eluted and can be used immediately. The viral nucleic acid purified by this method is free from contaminants, such as proteins, pigments, lipids and PCR/RT-PCR inhibitors.

- ▶ Plasma, serum, ascites, cerebrospinal fluid, urine and cell cultures supernatants
- ▶ Rapid spin protocols
- ▶ No alcohol precipitation
- ▶ Suitable for PCR/RT-PCR analysis

AxyPrep™ PCR Clean-Up Kit

The AxyPrep PCR Clean-Up Kit employs a special Binding Solution in combination with an AxyPrep spin column to achieve high selectivity and recovery of DNA fragments. This product is designed to purify DNA fragments > 75 nt/bp from PCRs and other enzymatic reactions, with an expected recovery of 70-90%. It is not necessary to remove mineral oil overlays from the PCRs before purification. This protocol will remove unincorporated primers (<50 nt), enzymes and unlabeled and fluorescent dye-labeled mononucleotides.

- Rapid spin and vacuum protocols
- Efficient purification of 75 bp-10 Kb amplicons
- No alcohol precipitation
- Up to 90% recovery
- Removal of unincorporated primers < 50 nt
- Maintains integrity of DNA fragments
- Purified DNA fragments are suitable for many downstream applications

AxyPrep™ DNA Gel Extraction Kit

The AxyPrep DNA Gel Extraction Kit employs optimized gel solubilization and binding buffers reagents in combination with a convenient spin column to purify DNA fragments from either TAE or TBE agarose gels (regular and low-melt). DNA fragments in a size range of 75 nt/bp up to 10 Kb* can be efficiently recovered. Depending upon the length of the DNA fragment, the recovery rate is approximately 60-85%. The unique buffer formulation ensures complete gel solubilization while also protecting the DNA fragments against damage and degradation. DNA fragments purified by this method are full-length with high biological activity. These fragments are suitable for all routine molecular biology applications, such as ligation, in vitro transcription, PCR, sequencing, etc.

- Rapid spin and vacuum protocols
- Efficient purification of 75 bp-10 Kb DNA fragments
- No alcohol precipitation
- Typical yields of up to 85%
- Purified DNA fragments are suitable for many downstream applications

- Ligation

Overview

* Factors such as fragment length and gel composition can influence the percent recovery of DNA fragments.

Filtration Kit	Kit Size	Cat. No.
AxyPrep DNA Gel Extraction Kit	4 preps	AP-GX-4
AxyPrep DNA Gel Extraction Kit	50 preps	AP-GX-50
AxyPrep DNA Gel Extraction Kit	250 preps	AP-GX-250

AxyPrep™ Multisource Total RNA Miniprep Kit

The AxyPrep Multisource Total RNA Miniprep Kit is designed to produce up to 80 µg of highly purified total cellular RNA from a wide array of different starting material types, without the use of proteinase or organic extractions. A special precipitation step removes cellular debris and most gDNA, eliminating the opportunity for column clogging and increasing both RNA binding capacity (yield) and purity. The RNA is bound to a mini spin/vacuum column for washing and desalting, using vacuum. The RNA produced by this Kit is exceptionally pure and highly intact and is suitable for the most demanding applications.*

- Rapid spin and vacuum protocols
- For animal tissues, plants tissues, cultured cells, bacteria, yeast and filamentous fungi
- No column clogging
- No organic extraction or proteinase digestion
- Up to 80 µg of highly intact, highly purified total cellular RNA

Mouse Liver

20 mg of fresh mouse liver was used for each sample. Samples were flash frozen with liquid nitrogen and disrupted using a mortar and pestle. Purification was carried out using reagents and protocol supplied by each kit manufacturer. Each sample was eluted with 100 µL TE and 4 µL of each sample was loaded per gel.

Yeast

50 mg of yeast paste was used with each kit sample. Samples were flash frozen with liquid nitrogen and disrupted using a mortar and pestle. Purification was carried out using reagents and protocol supplied by each kit manufacturer. Each sample was eluted with 100 µL TE and 4 µL of each sample was loaded per gel.

Corn Leaves

50 mg of corn leaves was used for each prep. Samples were flash frozen with liquid nitrogen and disrupted using a mortar and pestle. Purification was carried out using reagents and protocol supplied by each kit manufacturer. Each sample was eluted with 100 µL TE and 4 µL of each sample was loaded per gel.

Applications

Extraction of RNA from animal tissues, plant tissues, cultured cells, bacteria, yeast, and filamentous fungi

Overview

* Applications which are sensitive to small amounts of residual gDNA may require additional steps to digest and remove these traces of gDNA.

AxyPrep™ Multisource Total RNA Midiprep and Maxiprep Kits

The AxyPrep Multisource Total RNA Midiprep and Maxiprep Kit are designed to produce up to 1 mg (Midi) and 2 mg (Maxi) of highly purified total cellular RNA from a wide array of different starting material types, without the use of proteinase or organic extractions. A special precipitation step removes cellular debris and most gDNA, eliminating the opportunity for column clogging and increasing both RNA binding capacity (yield) and purity. The RNA is bound to a mini spin/vacuum column for washing and desalting, using vacuum. The RNA produced by this Kit is exceptionally pure and highly intact and is suitable for the most demanding applications.* A vacuum manifold and vacuum source are required for the Midiprep Kit.

- Rapid spin and vacuum protocols
- For animal tissues, plants tissues, cultured cells, bacteria, yeast and filamentous fungi
- No column clogging
- No organic extraction or proteinase digestion
- Up to 1 mg and 2 mg respectively of highly purified total RNA

RNA purified with the AxyPrep Multisource Total RNA Midiprep Kit. Purified RNA eluted in 300 µL TE Buffer and 1 µg of sample loaded per lane.

M	Axygen 100 bp DNA Ladder
Lane 1, 2	200 mg Rat Liver (duplicate samples)
Lane 3, 4	300 mg Rat Brain
Lane 5, 6	500 mg Spinach Root
Lane 7, 8	500 mg Corn Leaves
Lane 9, 10	2x10 ⁸ <i>S. Cerevisiae</i>

RNA purified with the AxyPrep Multisource Total RNA Maxiprep Kit. Purified RNA eluted in 2 mL TE Buffer and 1 µg of sample loaded per lane.

M	Axygen 100 bp DNA Ladder
Lane 1, 2	800 mg Rat Liver (duplicate samples)
Lane 3, 4	800 mg Rat Kidney
Lane 5, 6	1.3 g Holly Leaves
Lane 7, 8	4x10 ¹⁰ <i>E. Coli</i>

Applications

Extraction of RNA from animal tissues, plant tissues, cultured cells, bacteria, yeast, and filamentous fungi

Overview

* Applications which are sensitive to small amounts of residual gDNA may require additional steps to digest and remove these traces of gDNA.

AxyPrep™ Blood Total RNA Miniprep Kit

The AxyPrep Blood Total RNA Miniprep Kit is designed to process up to 400 µL of anticoagulated whole blood per prep. Red Blood Cells (RBCs) are removed using a special lysis buffer. Following White Blood Cell (WBC) lysis, genomic DNA (gDNA) and protein are removed via precipitation, which significantly improves the yield and purity of the total RNA sample. The carryover of gDNA is greatly reduced and the opportunity for column clogging is eliminated, ensuring optimal consistency between preps. The mini spin/vacuum column allows samples to be processed using either a centrifuge or vacuum manifold. Each miniprep column will bind up to 100 µg of total cellular RNA.

- ▶ Rapid spin and vacuum protocols
- ▶ No column clogging
- ▶ Dramatic reduction in DNA carryover
- ▶ Higher yields, higher purity
- ▶ Highly intact total RNA suitable for all applications

Total RNA purified with the AxyPrep Blood Total RNA Miniprep Kit. Purified RNA eluted in 60 µL TE Buffer and 8 µL of sample loaded per lane.

Lane 1, 2	200 µL Porcine Blood
Lane 3, 4	200 µL Mouse Blood

Applications

Extraction of RNA from animal tissues, plant tissues, cultured cells, bacteria, yeast, and filamentous fungi

Overview

AxyPrep Blood RNA Miniprep Kit	50 preps	AP-MN-BL-RNA-50

AxyPrep™ Micro RNA (miRNA) Miniprep Kit

The AxyPrep miRNA Miniprep Kit represents a new approach for purification of Micro RNA (miRNA) directly from animal or plant tissue and cultured cells. It produces a purified cellular RNA subfraction which is highly enriched for lower molecular weight species, such as miRNA and small interfering RNAs (siRNAs). This kit is designed to eliminate the problems associated with other spin column type RNA kits, such as column clogging and incomplete purification. Proteins and genomic DNA (gDNA) are precipitated and removed from the cell lysate. Then, larger RNAs, such as mRNA, 18s and 28s rRNA and residual DNA are removed by binding to a spin/vacuum column. miRNA and siRNAs remain unbound and are recovered by the addition of isopropanol and centrifugation.

- Rapid spin and vacuum protocols
- For animal tissues, plants tissues, cultured cells
- No column clogging
- No organic extraction or proteinase digestion
- Enriches for miRNAs and siRNAs

Applications

Northern Blotting

Extraction of RNA from animal tissues, plant tissues, and cultured cells

Applications which are sensitive to small amounts of residual gDNA may require additional steps to digest and remove these traces of gDNA

AxyVac™ Vacuum Manifold

The AxyVac Vacuum Manifold System provides a complete solution for filtration type sample purification. It is designed to accommodate a wide variety of different columns and SBS-format, 96-well and 384-well plates. The AxyVac is constructed of durable, easy-to-clean materials. The manifold base is injection molded ABS plastic. The manifold top and middle support are molded polycarbonate. The 96 well plate support is constructed of stainless steel. These materials offer exceptional resistance against degradation. The high-clarity polycarbonate components allow progression of the various filtration processes to be monitored visually.

- ▶ Single manifold for BOTH column-based and plate-based sample preps
- ▶ Integrated controls for vacuum regulation
- ▶ Constructed of durable, long-lasting materials

AxyVac with 96 well microplate

Applications

Filtration-type Sample Purification
 Column-based Sample Prep
 Plate-based Sample Prep

Components

The AxyVac vacuum manifold comes complete with all components* required to perform sample preparation with both columns and 96 well or 384 well plates. Components provided:

- ▶ Manifold base
- ▶ Manifold top
- ▶ Middle support
- ▶ Plate support
- ▶ Block support
- ▶ Waste reservoir

* The customer must supply tubing to connect the vacuum manifold to the vacuum source.

Axygen DNA Markers

The 100 bp DNA Ladder contains 11 discrete DNA fragments ranging in size from 100 bp to 3,000 bp. This marker is ideal for the size determination of PCR products. Two ready-to-use DNA size markers for gel electrophoresis, the 100 bp Ladder and 1 Kb Ladder represent the two most popular markers used for DNA fragment size determination. These markers are formulated to run accurately and to provide crisp band patterns. The two markers require no additional preparation and contain bromophenol blue for ease of use. Both markers are supplied at a concentration of 50 µg/500 µL (0.1 µg/µL).

The 1 kb DNA Ladder contains 13 discrete DNA fragments ranging in size from 300 bp to 10,000 bp. This marker is ideal for the size determination of digested DNA. Two ready-to-use DNA size markers for gel electrophoresis, the 100 bp Ladder and 1 Kb Ladder represent the two most popular markers used for DNA fragment size determination. These markers are formulated to run accurately and to provide crisp band patterns. For ease of use, the two markers require no additional preparation and contain bromophenol blue dye. Both markers are supplied at a concentration of 50 µg/500 µL (0.1 µg/µL).

The Low, High and Broad Range Markers offer a wide sizing range from 125 bp -10,000 bp. These three markers are supplied at a concentration of 50 µg/500 µL (0.1 µg/µL). Markers are preloaded with bromophenol blue dye and are supplied ready-to-use. The markers are robust and can be used for fast electrophoresis run (10-15 minutes).

- ▶ Ready-to-use
- ▶ Crisp band patterns
- ▶ Includes bromophenol blue dye
- ▶ Stable at room temperature

Applications

Sizing of wide range of DNA fragments

Specifications

100 bp and 1 Kb Ladders

- 500 µL per vial
- 0.1 µg/µL concentration
- Each vial is sufficient for 100 lanes
- Ready-to-use
- Contains bromophenol blue dye

Low Range, High Range, and Broad Range Ladders

- 600 µL per vial
- 0.1 µg/µL concentration
- Recommended loading of 5-10 µL per lane
- Ready-to-use
- Contains bromophenol blue dye

100 bp Ladder DNA Marker (100 - 3,000 bp)

The 100 bp DNA Ladder contains 11 discrete DNA fragments ranging in size from 100 bp to 3,000 bp. This marker is ideal for size determination of PCR products.

1 Kb Ladder DNA Marker (100 - 3,000 bp)

The 1 Kb DNA Ladder contains 13 discrete DNA fragments ranging in size from 300 bp to 10,000 bp. This marker is ideal for size determination of digested DNA.

Broad Range Marker (250 - 8,000 bp)

The Broad Range Marker has 11 discrete fragments.

High Range Marker (1,000 - 10,000 bp)

The High Range Marker has 8 discrete fragments.

Low Range Marker (125 - 3,000 bp)

The Low Range Marker has 9 discrete fragments.

Quality Control

Each lot is tested under appropriate electrophoresis conditions. The DNA concentration is determined spectrophotometrically and the absence of nucleases is confirmed by appropriate tests. Temperature stability is confirmed by burn-in tests where the DNA marker is subject to storage at 65°C and 95% humidity for 2 weeks.

Phenol	95+	B	D
Phosphoric acid	100	C	D
Potassium bromide		A	B
Potassium chloride	satd.	A	A
Potassium fluoride	satd.	A	A
Potassium hydroxide		A	A
Propionic acid		A	B
Propyl alcohol		A	B
Propylene glycol		A	A
Silicone oil		A	A
Sodium acetate	100	A	A
Sodium carbonate	satd.	A	A
Sodium chloride		A	A
Sodium hydroxide	satd.	A	A
Sodium hypochlorite	satd.	B	B
Sulfuric acid	satd.	C	D
Sulfuric acid	98	C	D
Tetralin	10	C	D
Toluene	100	C	C
Trichloroethane	100	B	C
Triethylene glycol		D	D
Trifluoroacetic acid (TFA)	20	B	C
Xylene	100	C	D
Zinc chloride		A	A
Zinc sulfate		A	A

The above chemical resistance chart is meant to be used as a guide only. Temperature, exposure time and functional conditions affect resistance and can vary for each application. Axgyen highly recommends users evaluate products under their own conditions prior to use. Axgyen does not warrant (neither expressed or implied) that the information in this chart is accurate or that any material is suitable for any purpose.

Maximum RCF and RPM (G-Force)**PCR Tubes**

PCR-02, PCR-02D, PCR-05, PCR-0208

4,000 RCF**PCR Microplates***

PCR-24, PCR-32, PCR-48, PCR-96, PCR-96-MB, PCR-96-FLT, PCR-96-LP-FLT, PCR-96-SG, PCR-96-AB, PCR-96-LP-AB, PCR-96M2-HS, PCR-96-FS, PCR-384, PCR-384M2, PCR-384-RGD, PCR-384-55

4,000 RPM**Assay and Deep Well Microplates***

P-384-120SQ-C, P-384-240SQ-C, P-DW-11-C, P-DW-20-C, P-DW-500-C, P-2ML-SQ-C, P-5ML-48-C, P-96-450R-C, P-96-450V-C

4,000 RPM**Microcentrifuge Tubes**MCT-060[†], MCT-175[†], MCT-150[†], MCT-200[‡]**14,000 RCF****Screw Cap Tubes***

SCT-050, SCT-050-SS, SCT-150, SCT-150-SS, SCT-200, SCT-200-SS, SCT-45

20,000 RCF

Products filled with distilled water and spun at 20°C for 20 minutes with properly supportive rotor inserts. Your results may vary depending on sample type and volume.

* This product tested with IPA Solution

† This product tested with chloroform

‡ This product tested with 50/50 water and chloroform

Unit Conversion Reference Table

Unit	Symbol	Equivalent
nanoliter	nL	1 nL = 10 ⁹ L
microliter	µL	1 µL = 10 ⁻⁶ L
milliliter	mL	1 mL = 10 ⁻³ L
picogram	pg	1 pg = 10 ⁻¹² g
nanogram	ng	1 ng = 10 ⁻⁹ g
microgram	µg	1 µg = 10 ⁻⁶ g
milligram	mg	1 mg = 10 ⁻³ g
kilogram	kg	1 kg = 10 ³ g

Autoclaving Guideline for Plastics

To ensure successful steam sterilization of your plastic labware, adhere to the following guidelines. Autoclave all plastic consumable at 121°C for 15 minutes, 15 psi/1 atm. Do not use a dry cycle as this may cause deformation or weakening of the plastic. Allow temperature within the autoclave to return to at least 80°C before removing product. NOT ALL PRODUCTS ARE AUTOCLAVABLE.

RPM vs. RCF

Revolutions per minute (RPM) is the speed that your rotor spins in your centrifuge. RPM is specific to individual centrifuge brands and rotor sizes.

Relative centrifugal force (RCF) is better known as g-force. This indicates the actual force resulting from the spinning action in the centrifuge. It is g-force that drives sample separation.

The following equation can be used to convert RPM to RCF for any model centrifuge.

$$\text{RCF} = 0.00001118 \times \text{radius of rotation (cm)} \times \text{RPM}^2$$

Note: Radius of rotation is given by the distance of the furthest most point of the tube from the axis of rotation. Please refer to your centrifuge user guide for radius value.

Plate Volume Reference

Cat. No.	Volume to Brim of Well	Working Volume	Volume with AxyMat™
PCR-96-LP-FLT-C	210 µL	180 µL	100 µL
PCR-96-C	350 µL	300 µL	240 µL
PCR-96-FLT-C	330 µL	300 µL	270 µL
PCR-96-LP-AB-C	220 µL	190 µL	120 µL
PCR-96-LC480-C-NF	210 µL	190 µL	120 µL
PCR-96-AB-C	330 µL	300 µL	220 µL
PCR-96-HS-C	340 µL	300 µL	230 µL
PCR-96-SG-C	320 µL	280 µL	240 µL
PCR-96-FS-C	220 µL	190 µL	120 µL

P-384-120SQ-C	135 mL	125 mL	90 mL
P-384-240SQ-C	255 mL	240 mL	210 mL
P-5ML-48-C	4.9 mL	4.6 mL	4.0 mL
P-DW-10ML-24-C	11 mL	10 mL	9.0 mL
P-1ML-SQ-C	1.6 mL	1.4 mL	1.1 mL
P-2ML-SQ-C	2.3 mL	2.2 mL	1.9 mL
P-DW-11-C	1.5 mL	1.1 mL	0.95 mL
P-DW-12-HC	1.35 mL	1.25 mL	1.1 mL
P-DW-20	1.9 mL	1.8 mL	1.5 mL
P-DW-500-C	610 µL	560 µL	450 µL
P-96-450R-C	550 µL	450 µL	350 µL
P-96-450V-C	500 µL	450 µL	350 µL

Volume to Brim of Well = maximum volume of fluid that can be placed in each well without spilling out

Working Volume = the comfortable working volume of each well of the plate
