Katyani Prefab System

BETTER DESIGN. BETTER MATERIALS
BETTER TECHNIQUE.

The Katyani crafts Frame uses light- gauge, high-tensile strength, cold-rolled,galvanized steel elements, and structural tube steel columns that are bolted together on site to create a bi-directional moment-resisting frame. The strength of both the steel and the bolted connections that attach the framing elements provide superior structural integrity. The bolted moment connections are comprised of horizontal and vertical elements (post and beam) that are fastened in an eight-bolt pattern that creates an exceptionally strong structure..
