ARTIFICIAL GRASS / TURF SYSTEMS

Artificial turf system is a surface of synthetic fibers made to look like natural grass. It is most often used in arenas for sports that were originally or are normally played on grass. However, it is now being used in sports stadiums, residential lawns, and commercial applications as well. The benefits are clear: in comparison with gravel on natural grass, artificial grass requires little maintenance. Artificial grass for games is wear-resistant, extremely user-friendly, and does not make your footwear dirty. Artificial grass courts are that they drain very well. After a rain shower, the artificial grass courts are immediately playable. The artificial grass gives good grip for fast footwork; there are many different artificial turf qualities for tennis, football, hockey, baseball, and lawn, each with its specific playing characteristics.

Area of Application

- Football
- Hockey
- Tennis Court
- Baseball
