Omio Gold Testing Machine

MOST POPULAR PRODUCTS

Have you ever visited a jewelry outlet? If yes, then you would have noticed that the jeweler always has a jewelry scale to weigh the jewelry pieces. Jewelers rely on these several scales, depending on the type of jewelry they deal in. Thus, precisely assessing the jewelry quality. Therefore, it would not be wrong to say that every sector including jewelry relies on the machines for achieving efficiency at work. Realizing this aspect, Omio Technologies stepped up as a manufacturer and wholesaler of Gold Testing Machine, Jewelry Scale and Analytical Scale. Being a customer-oriented business, we leave no stone unturned in carrying out customer satisfaction surveys, thereby identifying their preferences and then delivering them the balances and scales of the specifications they require. Besides, we ensure they receive the best customer services. As a result, we always achieve complete customer satisfaction.

Infrastructure

Success does not come easily to everyone. One has to struggle a lot to achieve it. And, we since the beginning of our business voyage have made it our motive to succeed and make our way to the top in the list of leading names in the industry. For this reason, we have built a robust infrastructural facility in Dera Bassi, Punjab, India. Our factory is run by our experienced management and proficient people and is ensured to be outfitted with technologically advanced machines. With such modern machines, the product rate of our Jewelry Scale, Analytical Scale and Gold Testing Machine are improved without compromising on the quality.

Warehouse

Another greatest asset that our company has is our spacious warehouse that we have installed with all the requisite resources to ensure proper storage of our manufactured commodities. We also have recruited a small group of warehousing personnel to look after all the warehousing operations, thereby ensuring easy storage and retrieval of Gold Testing Machine, Jewelry Scale and Analytical Scale whenever required.

Why Choose Us?

We provide you with a variety of possibilities. View your perks and what you will receive.

- **Radiation:** The density meter does not emit any radiation, making it safer to use it without taking any special safety measures.
- **Maintenance:** As their analytical instrument is simply a weighing scale and does not require any upkeep, density meters require very little to no maintenance.
- **Bandhel:** The gold clarity in bandhel or gold-plated jewelry can be determined using this density meter because it can only determine the gold content in the entire sample.
- **Skin:** A XRF scanner measures the sample's top 0.2mm layer. The density meter, in comparison, determines the purity throughout the entire sample, not just the skin.
- **User-friendly:** Density meters are easier to hold and use because they are smaller.
- **Price:** The density meter is made to be just a small portion of the expense of the XFR testing machine to be practical for jewelers.
