Metal Finishing Compounds

MF-AR-45

MF-MSB-03

MF-SS-04

MF-AL-02

- **BLUEMECH MF Compounds** have several functions such as deburring, burnishing, descaling, derusting, degreasing, surface finish, lustre finish, Etc.
- These compounds polish metal to make full use of their tones and lustre and eliminate smear from work pieces. They also maintain the friction caused between media and product.
- Our compounds enhance grinding efficiency of the media leading to optimum finishing in a short time, as well as protecting work pieces from discolouring.
- MF Compounds are chemical blends on concentrated liquid or powder chemical agents that are water soluble and help in connection with the respective media, to improve the treated surface.
- The compound comes with a strong cleaning capacity, brighten the surface and few of them also contains corrosion inhibitors.
- These compounds are highly concentrated, which are also economical and gives faster result to be used in Tumblers, Vibrators or Centrifugal Finishing Machines.
- These compounds and processing media meet highest requirements for an optimum surface finish. They excel by first class quality, high rent ability and good environmental compatibility.
- MF compounds are suitable for mass finishing operation when parts are being deburred and finished with abrasive media and water. It allows better control of the process and can enhance better cutting action.

PRODUCT CODE

APPLICATION

MF-GP-01	General
MF-AL-02	Aluminium / Zamak
MF-MSB-03	MS/SS/Brass
MF-BR-04	Brass
MF-CR-05	Copper
MF-SS-06	Stainless Steel
MF-BRZ-07	Bronze
MF-TT-08	Titanium
MF-AR-45	Anti Rusting
MF-MORDANT-224	Descaling/De-Hardening
MF-HDP-15	Deburring (Powder)

- Packing in 30 & 50 Kg
- Please specify the metal you require to process.
- Dispatched within a week from the ordered date.
