

Pneumatic Actuated Rotary Valve

Efficient Flow Control Solution for Industrial Systems

This pneumatic actuated rotary valve is designed for precise control of air, dust, and bulk material flow in industrial applications. It is widely used in cement plants, power plants, and material handling systems. The valve ensures leak-proof performance, durability, and efficient operation under harsh conditions.

Parameter	Specification
Type	Pneumatic Rotary Valve
Material	Mild Steel / Stainless Steel
Application	Dust & Material Handling
Pressure	Up to 10 Bar
Temperature	Up to 200°C
Actuation	Pneumatic Cylinder
Connection	Flanged
Size	DN100 – DN400

Key Features:

- Heavy Duty Construction
- Leak Proof Design

- Low Maintenance
- Fast Pneumatic Operation
- Long Service Life

Applications:

- Cement Industry
- Power Plants
- Steel Plants
- Dust Collection Systems
- Bulk Material Handling
