

Pneumatic Actuated Industrial Valve

Reliable Flow Control Solution for Industrial Applications

This pneumatic actuated industrial valve is designed for precise control of air, dust, and bulk material flow. It is widely used in cement plants, power plants, and dust handling systems. Built with robust materials, it ensures durability, leak-proof performance, and low maintenance operation.

Parameter	Specification
Type	Pneumatic Actuated Valve
Structure	Flanged / Slide Gate
Material	Mild Steel / Stainless Steel
Media	Air, Dust, Powder
Pressure	Up to 10 Bar
Temperature	Up to 200°C
Actuation	Pneumatic Cylinder
Connection	Flanged End
Size	Customizable (DN100 – DN300)

Key Features:

- Heavy Duty Construction

- Leak Proof Operation
- Low Maintenance
- High Efficiency
- Easy Installation

Applications:

- Cement Industry
- Power Plants
- Steel Plants
- Dust Collection Systems
- Bulk Material Handling
