

WIPER CONVEYOR

Efficient & Reliable Industrial Material Handling Solution

Product Description

Wiper Conveyor is a robust industrial conveying system designed for smooth and continuous movement of materials while supporting wiping, cleaning, or surface-handling operations. It is suitable for production lines and material-handling applications where reliable conveying, controlled movement, and easy maintenance are required.

Key Features

- Heavy-duty construction for industrial use
- Smooth and continuous material conveying
- Efficient wiping and surface-handling operation
- Low maintenance and easy operation
- Compact and production-line friendly design
- Customizable conveyor length, width and configuration
- Reliable performance for continuous-duty applications

Typical Specifications

Parameter	Typical / Customizable
Conveyor Type	Wiper Conveyor
Construction	MS / SS / As per requirement
Drive	Electric motor with suitable gearbox
Belt / Wiper	Application-specific
Conveyor Length	As per customer requirement
Conveyor Width	As per customer requirement
Capacity	As per material and application
Power Supply	As per site requirement

Applications

Manufacturing plants • Packaging lines • Processing industries • Material handling systems • Production lines • Industrial cleaning and wiping applications • Customized conveying systems

Advantages

Durable construction, dependable operation, reduced manual handling, improved workflow efficiency, easy integration with production systems, and customization based on material and process requirements.
