## PRP *Hair Growth*

PRP treatment for hair loss is a treatment that includes drawing back a patient's own blood, preparing and processing it in a way that only the patient's PRP (platelet-rich plasma) cells remain, and then it is infused into the scalp. PRP contains basic proteins that help in regular hair development.

PRP therapy offers the opportunity for hair growth for those patients who are not candidates for surgery or those patients wanting a more aggressive nonsurgical approach to treatment.

## Cell Active Therapy

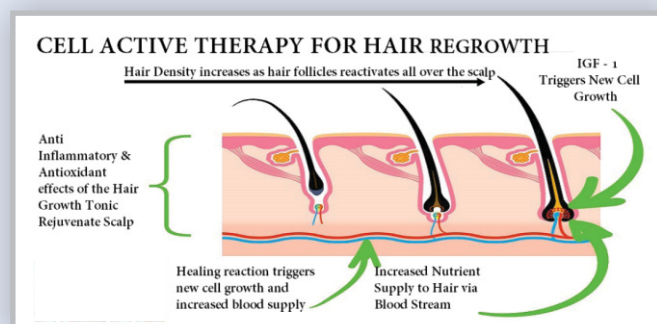

### Treating hair loss with Cell Active Therapy

There are a variety of treatments available for hair loss which includes Cell Active Therapy. Cell Active Therapy helps to significantly reduce hair loss and boosts new hair growth.

It can also treat receding hairlines, bald patches, alopecia and thinning, brittle hair.

The aim of Cell Active Therapy, is to stimulate the circulation to ensure the hair follicles receives an ample supply of blood. This enhancement will trigger the follicles into new hair growth. Plus this will also stimulate the production of collagen which improves skin tone, elasticity and appearance.

## IONIZATION *Hair Therapy*

Ionization is the method that associate degree atom or a molecule acquires a negative or charge by gaining or losing electrons to create ions, usually in conjunction with different chemical changes. Ionization may end up from the loss of associate degree negatron once collisions with subatomic particles, collisions with different atoms, molecules and ions, or through the interaction with light-weight. Heterolytic bond cleavage and heterolytic substitution reactions may end up within the formation of particle pairs. Ionization will occur through decay by the inner conversion method, during which associate degree excited nucleus transfers its energy to at least one of the inner-shell electrons inflicting it to be ejected.

## Acupuncture

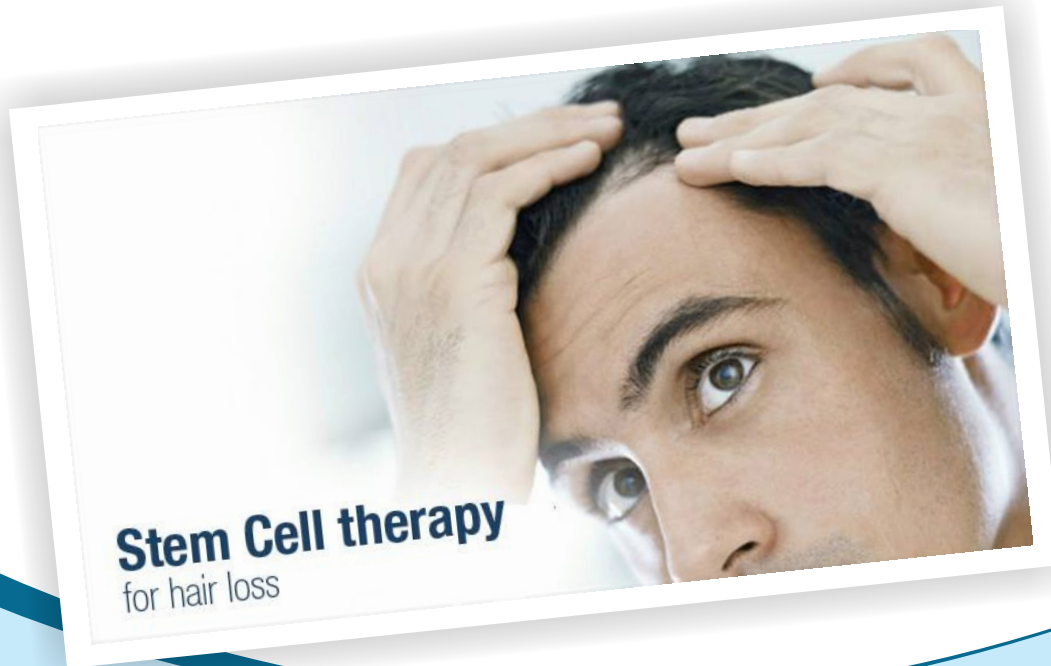

In the traditional Chinese healing, hair is related to other more vital parts of the body as the internal organs and the blood. The needles puncture key points of your head to improve blood circulation and distribution of the energy flow. It stimulates your hair follicles, as well as particular nerves and blood vessels of the head.

Treating a hair loss with acupuncture technique is a long-term process, which requires a lot of patience and dedication. No miracles should be expected overnight.

## Stem Cell *Therapy*

The Stem Cell Treatment is a minimally invasive procedure mainly used to stimulate the hair follicles, ensuring its regrowth. Stem cells, present at the root of the hair are known to promote the hair growth by stimulating the hair follicles. In the case of severe hair fall or baldness, the stem cells either gets depleted or do not mature enough to facilitate the hair growth. In stem cell therapy, the hair loss or baldness is treated by processing these stem cells (hair follicles collected from the affected person) in labs to ensure an increase in the stem cells.

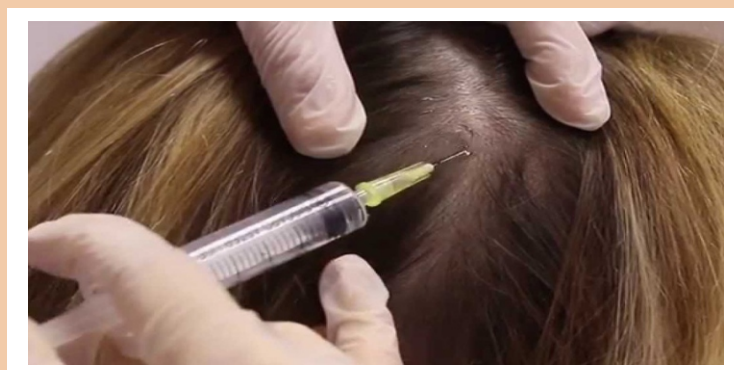

The stem cell therapy is hassle-free and the time involved in the entire treatment varies from individual to individual (depending on the extent of the hair loss). In people with not so.

## **Meso** **Therapy** *For hair regrowth*

Mesotherapy is a hair growing technique that is non-invasive. Superficial micro-injections are made below the epidermis of the skin to specific tissues. The term meso has originated from mesoderm which is the second or middle layer of the skin. This treatment can successfully trigger the mesoderm thereby relieving an array of ailments and symptoms. The injected solution is a combination of co-enzymes, amino acids, minerals and vitamins. The solution is tailored to suit each patient's condition and their treatment plan.

## SCALP *Peeling*

Scalp Peeling is a method for evacuation of dead skin cells, the decimation of unsaturated fats that collect on the surface of the scalp.

Scalp peel is an uncommon salon treatment; it enables you to dispose of dead skin particles and remainders of skin/hair beauty care products for example, colors, gels, and in result, you get more dynamic and voluminous hair. Skin exfoliation is important to reestablish the supply of oxygen to the skin, to build procedure of recovery, to dispense with abundance sebum, to enact blood dissemination, evacuate dandruff, and soothe scalp tingling.

Scalp Peel is appropriate for all skin sorts, however your skin ought to be free of harm, splits and wounds, it is better not to peel promptly after hair shading – it accelerates the blurring of hair shading.
