AllState Arena

Chicago, IL

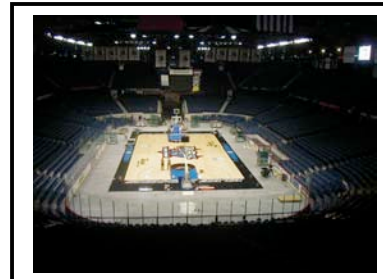

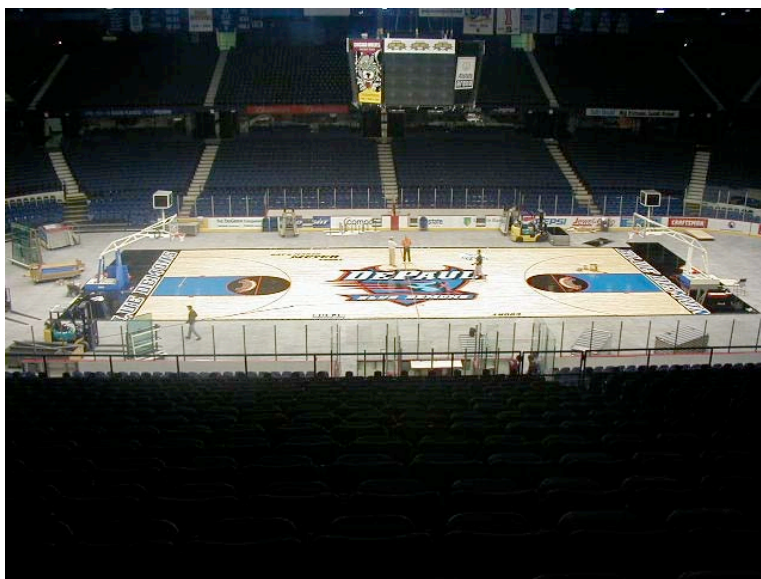

Home of the DePaul "Blue Demons"
Hosting Site: NCAA Regionals - 2005

Project Scope:

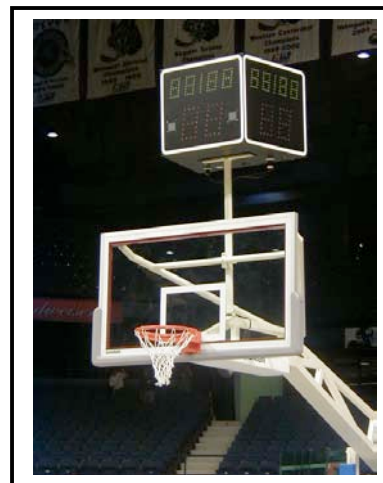

In order to meet the challenging mounting locations and upgrade the light levels, the AllState Arena owner's called Universal Sports Lighting to propose a solution.

Universal Sports Lighting met all of the requirements and exceeded the lighting performance, which included black out capabilities and individual fixture control.

AllState Arena

Excellent light cut off

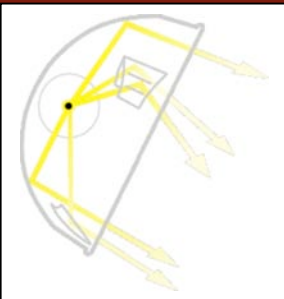

No backboard glare provides excellent background for shooting.

University of Colorado - Boulder "Folsum Field"

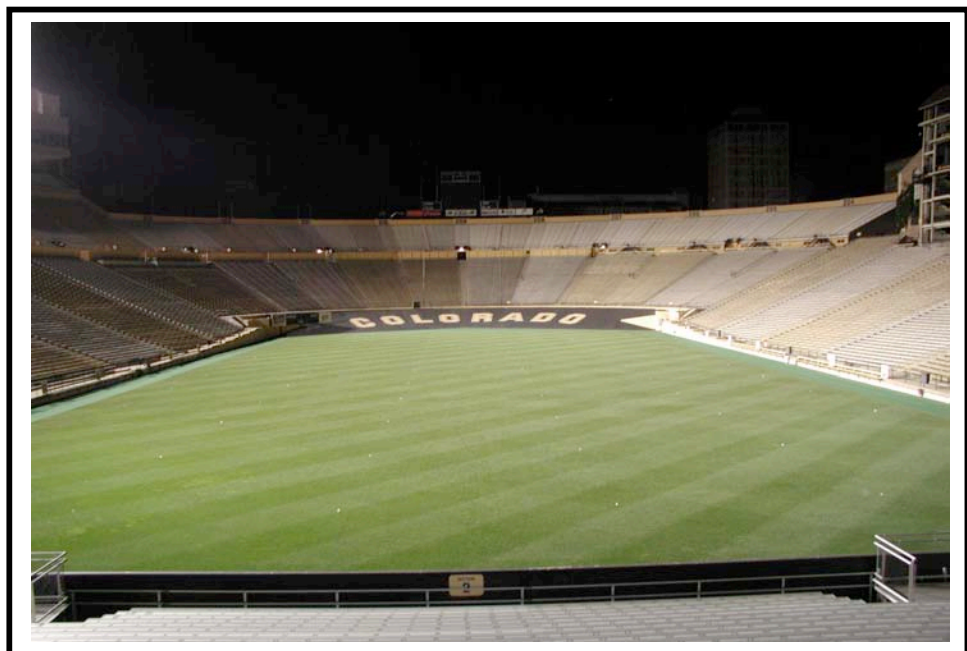

Project Scope:

New lighting was installed for the Home Side that needed special designed and fabricated roof mounted racks. Universal Sports Lighting designed a modular system that allowed easy contractor installation. This system in conjunction with the AllStar rear relamping is a perfect match for the university.

With the superior optical design, Universal Sports Lighting is able to exceed the specifications and provide exceptional lighting performance.

**University of Kansas
"Memorial Stadium"****Project Scope:**

When the University of Kansas decided to renovate and light Memorial Field they choose Universal Sports Lighting. Cost effective design and quick installation where the key reasons for choosing Universal Sports Lighting. The performance was met with 4 150' tall poles and 240 1500 watt metal halide fixtures.

McLean County Baseball Complex
Bloomington, IL

5-23-05

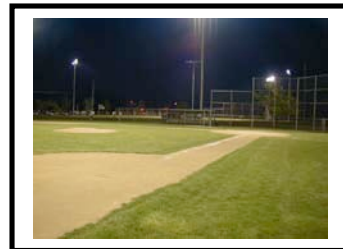

Project Scope:

When the McLean County Pony League decided on lighting 5 fields near the Blooming/Normal airport they choose Universal Sports Lighting.

The installed system can be summarized by the McLean County Baseball project manager, Brian Auer.

"Wow - is about all I can say. STILL after 1-week, the awe is still there each time I see the complex with the light poles up and the lights on."

After reviewing several bids from competitors, Universal Sports Lighting was chosen for value and quality!

Saint Thomas More High School Champaign, IL

Project Scope:

When this new private Catholic High School decided to invest in a new lighting system for their football field, Universal Sports Lighting was chosen and installed.

The choice was clear after reviewing Hubbell and Musco's lighting proposals. The school decided a Universal Sports Lighting system should be purchased and installed.

The lighting system achieves 50 footcandles maintained utilizing 16-1500 watt fixtures per pole.

Direct burial poles were used to speed installation and reduce cost.

Cellular Field

Comisky Park

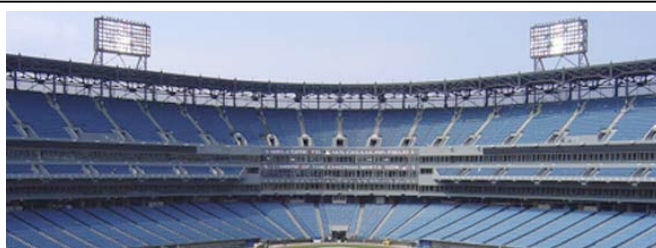

Home of the Chicago White Sox

Matching the existing electrical capabilities at US Cellular Field, USL utilized 640 1500-watt metal halide fixtures for the playing field and 72 1500-watt metal halide fixtures for the work/maintenance lighting.

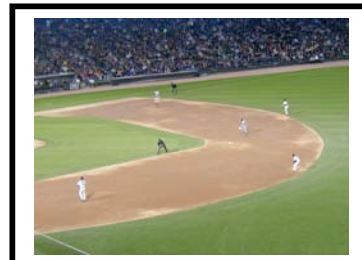

The fixture quantity is identical to the former system that did not meet the light levels required by professional baseball.

The light levels verified by both USL and the Commissioner of Baseball Office were 461 footcandles infield based on targeted level of 300 footcandles. Outfield achieved 286 footcandles based on targeted level of 200 footcandles. These measured results were taken after a 100 Hr. burn in period.

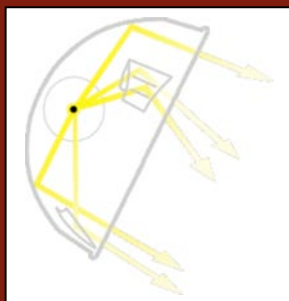

Uniformity and vertical footcandle measurements are outstanding and the owner of the facility, the Illinois Sports Facilities Authority, is extremely impressed and pleased with the Universal Sports Lighting performance.
