History of Korean Ginseng

Korean ginseng has been considered a valuable and mystic material for thousands of years in oriental countries including Korea, Japan and china. Since it has been proved a panacea through a long history, currently its research in the field of medical, pharmaceutical, biology etc. have been widely activated in line with a life science worldwide. Beginning by wild ginseng, it had cultivated from the 16 B.C. and recorded as a marvelous medicine in almost all Oriental medicine books from several hundred years ago.

Nowadays, lots of these have been published concerning its effectiveness by scholars in and strengthen its foothold by degrees contributing to the health of mankind.

The superiority of Korean Ginseng

The reason that Korean Ginseng is superior to other ginseng is that Korean has the optimal topographical and climatic conditions for ginseng growing Ginseng plants in Korea are mostly grown 36° and 38°N. This gives it an optimal growing season of 1,800 days, much longer than the 1,200~1,300 days of other countries. With these natural conditions Korean Ginseng has a crunch texture and is rich in flavor.

Type of Korean Ginseng

Fresh Ginseng (Su-sam)

Those cultivated ginseng without special processing, is called Fresh Ginseng or Raw Ginseng. Fresh Ginseng contains about 75% of water so it is difficult to store more than a week and the processing is required for long term storage.

Black Ginseng (Heuk-sam)

It is made through the process of steaming for 9 times & drying for 9 times and called as black ginseng as its color changes during the process. It is commonly referred that Black ginseng contains much Ginsenoside Rki, Rg5, Rbi, Rhi(S), Rg2(S), Rg2(R), Rc, Rf, Rd, Rgs(S), Rg3(R), Rk3, Rg6, Rfi, Rf4 and so on.

White Ginseng (Baek-sam)

Dried fresh ginseng with sunlight or heat or other methods is called as White ginseng, and it is divided to Jiksam, Bangok-sam and Gok-sam by the type of drying method. It is peeled and dried to reduce the water content to about 14% or less.

Cultured Wild Ginseng (Wood-cultivated Ginseng)

It is cultivated after sowing the seed of natural wild ginseng in a wood (forest). It is suited to the organic and environment-friendly agricultural products.

Taekuk Ginseng (Taeukuk-sam)

It is a ginseng which is not peeled and made by parboiling Fresh ginseng in boiling water at 98-100°C Before drying. It used to be substituted for Red Ginseng for a specific period of time.

Cultivated Tissue Wild Ginseng

It is a cultured wild ginseng which is biotechnologically cultured from a tissue of natural wild ginseng for 50~60 days and the quality is about the same with the parent natural wild ginseng.

Red Ginseng (Hong-Sam)

Red ginseng is not peeled and made for keeping long life. It is dried after steaming and made the moisture of it below 14%. The epidermis of ginseng contains a lot of effective ingredients and new effective ingredient (Saponin) is made during the steaming process.

Wild Ginseng (San-sam)

It grows naturally in the deep mountain and also called Mountain Ginseng. It is relatively rare, and even increasingly endangered, due in large part to high demand for the product in recent years. It is highly in scarcity.

Medicinal effects of Korean Red ginseng

Immune System

The immunity increase effect of Korean ginseng, particularly red ginseng has been proven by numerous scientists, Moreover, red ginseng's effort of preventing avian flu has been proven domestically.

Diabetes Mellitus

Professor J. S. Jo of Kyeongbuk National University, professor Okuda of ehime University in Japan, reported results of clinical studies that, by the administration of red ginseng, the blood sugar level in diabetics could be lowered and the insulin dosage could be reduced.

Hypertension

Professor C. N. Joo of Yonsei University reported that Korean Red ginseng not only lowered cholesterol level in the blood by promoting the activity of various enzymes related to the lipid metabolism but also prevented atheroma formation.

Liver Protection

Professor Dr. Han of Junang University reported that Korean red ginseng reduced histological lesions including necrotic death of liver cells induced by toxic chemicals such as carbon tetrachloride and phenacetin.

Erectile Dysfunction

At the congress of the European Society for Sexual Medicine held in London, UK in December 2004, the team led by Brazil's Dr. Enrico Andrade reported a study where red ginseng was found to be effective in reversing erectile dysfunction.

Anti-fatigue and Anti-stress

Dr. Brekhman presented the concept of tonic effect of ginseng as a "phenomenon that increases general resistance" and said that ginseng improves defense ability non-specifically by increasing resistance of the body against harmful environmental conditions. He named this ginseng effect adaptogen.

Anti-aging

Professor C. W. Park of Seoul National University found that the nonsaponin components of Korean red ginseng suppressed the harmful effects of free oxygen radicals $(O, H_2O_2, OH, {}^1O_2)$ which exercise an important role in tissue degeneration.

Brain Activity

Dr. Petkov of Physiological Research Institute of Bulgaria and professor JS. Oh of Seoul national University found that Korean Red ginseng enhances brain activity and maintains psychological stability.

Female menopause

Dr. Kim SY, Seo SK, and 6 teammates found that Korean red ginseng has effects of red ginseng supplementation on menopausal symptoms and cardiovascular risk factors in postmenopausal women.
