● Company Introduction

MITI Systems Inc. was founded in March, 2008 and has developed various types of the polymeric microneedles by micro processing technology. We are manufacturing and supplying the microneedle components for roller and stamp and the commercial microneedle products are mainly used to increase the absorption rate of the effective ingredients, such as high molecular weighted or hydrophilic materials in cosmeceuticals. Comparing with conventional microneedles products, our products made of biocompatible polymer have features like no metal allergy, less pain and easy-to-use.

In addition to solid microneedles, we also developed water soluble micro spicules which can be integrated into cosmetic formula for microneedling effect. Our microneedle applications have been focused on skin care but we are making effort to expand the microneedle technology to drug delivery systems and micro diagnosis system.
